| SG20             | Stow “away from” SGG1 – acids.   |
| SG21             | Stow “away from” SGG18 – alkalis.  |

## Chapter 7.2 – General segregation provisions

| Segregation code | Description   |
|------------------|---|
| SG22             | Stow “away from” ammonium salts.  |
| SG23             | Stow “away from” animal or vegetable oils.  |
| SG24             | Stow “away from” SGG17 – azides.  |
| SG25             | Stow “separated from” goods of classes 2.1 and 3.   |
| SG26             | In addition: from goods of classes 2.1 and 3 when stowed on deck of a containership a minimum distance of two container spaces athwartship shall be maintained, when stowed on ro-ro ships a distance of 6 m athwartship shall be maintained. |
| SG27             | Stow “separated from” explosives containing chlorates or perchlorates.  |
| SG28             | Stow “separated from” SGG2 – ammonium compounds and explosives containing ammonium compounds or salts.  |
| SG29             | Segregation from foodstuffs as in 7.3.4.2.2, 7.6.3.1.2 or 7.7.3.7.  |
| SG30             | Stow “away from” SGG7 – heavy metals and their salts.   |
| SG31             | Stow “away from” SGG9 – lead and its compounds.   |
| SG32             | Stow “away from” SGG10 – liquid halogenated hydrocarbons.   |
| SG33             | Stow “away from” SGG15 – powdered metals.   |
| SG34             | When containing ammonium compounds, “separated from” SGG4 – chlorates or SGG13 – perchlorates and explosives containing chlorates or perchlorates.  |
| SG35             | Stow “separated from” SGG1 – acids.   |
| SG36             | Stow “separated from” SGG18 – alkalis.  |
| SG37             | Stow “separated from” ammonia.  |
| SG38             | Stow “separated from” SGG2 – ammonium compounds.  |
| SG39             | Stow “separated from” SGG2 – ammonium compounds other than AMMONIUM PERSULPHATE (UN 1444).  |
| SG40             | Stow “separated from” SGG2 – ammonium compounds other than mixtures of ammonium persulphates and/or potassium persulphates and/or sodium persulphates.  |
| SG41             | Stow “separated from” animal or vegetable oil.  |
| SG42             | Stow “separated from” SGG3 – bromates.  |
| SG43             | Stow “separated from” bromine.  |
| SG44             | Stow “separated from” CARBON TETRACHLORIDE (UN 1846).   |
| SG45             | Stow “separated from” SGG4 – chlorates.   |
| SG46             | Stow “separated from” chlorine.   |
| SG47             | Stow “separated from” SGG5 – chlorites.   |
| SG48             | Stow “separated from” combustible material (particularly liquids).  |
| SG49             | Stow “separated from” SGG6 – cyanides.  |
| SG50             | Segregation from foodstuffs as in 7.3.4.2.1, 7.6.3.1.2 or 7.7.3.6.  |
| SG51             | Stow “separated from” SGG8 – hypochlorites.   |
| SG52             | Stow “separated from” iron oxide.   |
| SG53             | Shall not be stowed together with combustible material in the same cargo transport unit.  |
| SG54             | Stow “separated from” SGG11 – mercury and mercury compounds.  |
| SG55             | Stow “separated from” mercury salts.  |
| SG56             | Stow “separated from” SGG12 – nitrites.   |
| SG57             | Stow “separated from” odour-absorbing cargoes.  |
| SG58             | Stow “separated from” SGG13 – perchlorates.   |
| SG59             | Stow “separated from” SGG14 – permanganates.  |
| SG60             | Stow “separated from” SGG16 – peroxides.  |
| SG61             | Stow “separated from” SGG15 – powdered metals.  |
| SG62             | Stow “separated from” sulphur.  |

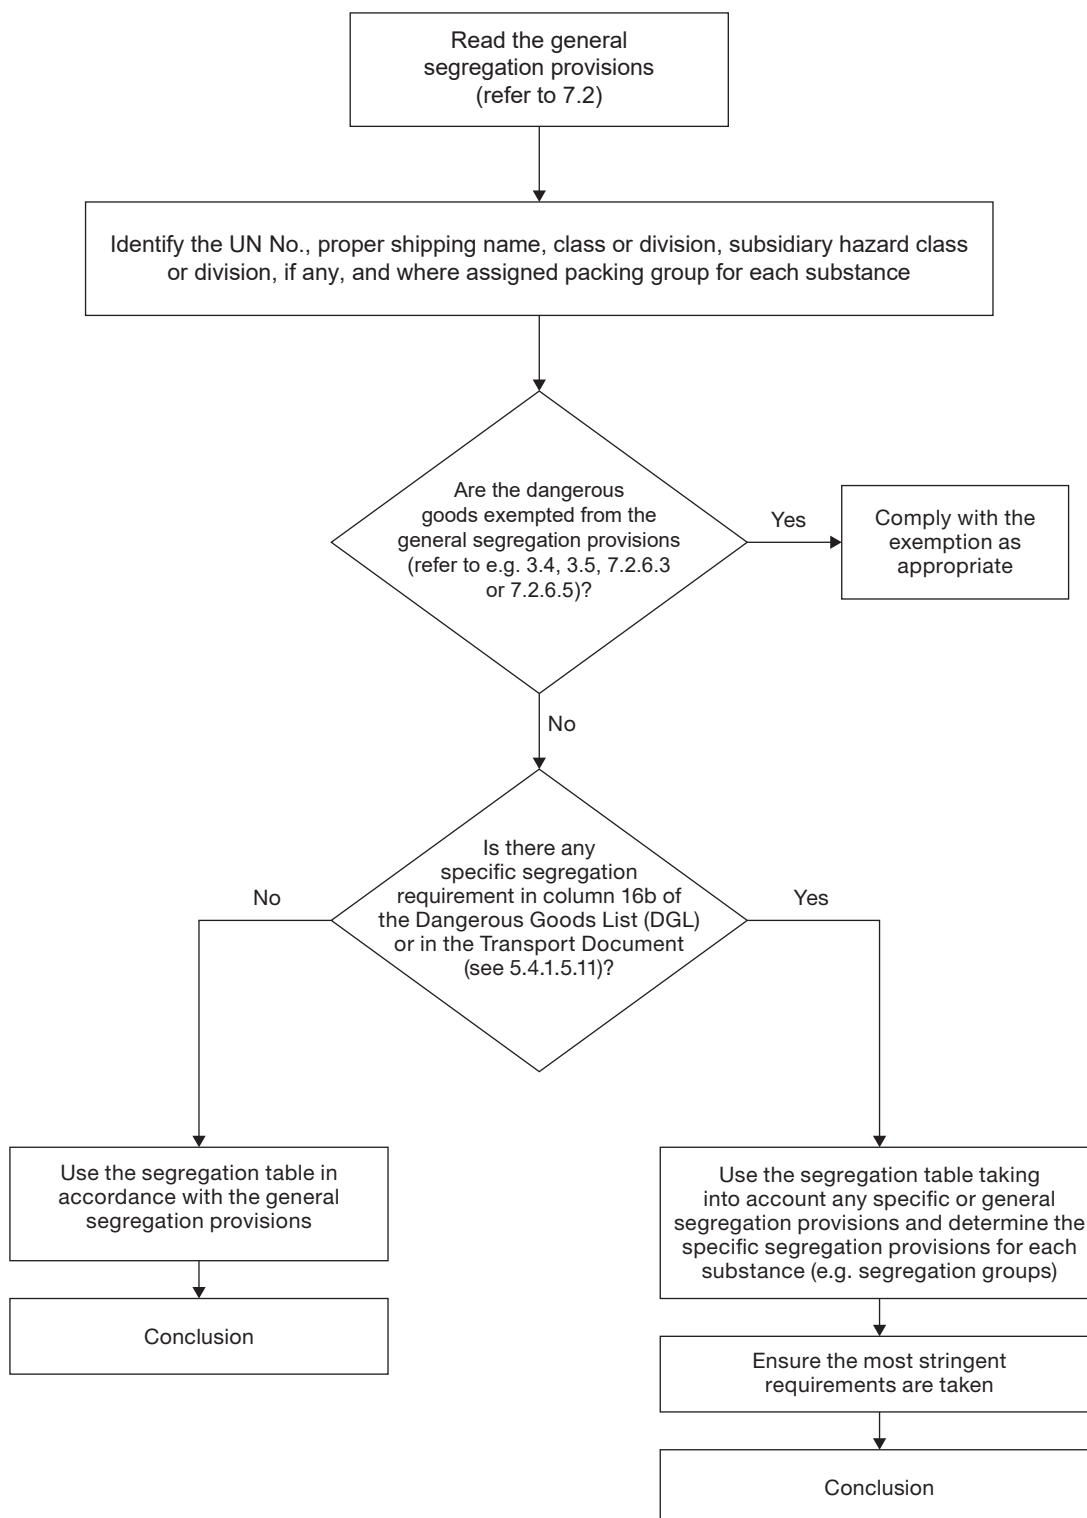

## Part 7 – Provisions concerning transport operations

| Segregation code | Description  |
|------------------|--|
| SG63             | Stow “separated longitudinally by an intervening complete compartment or hold from” class 1.   |
| SG64             | [Reserved]   |
| SG65             | Stow “separated by a complete compartment or hold from” class 1 except for division 1.4.   |
| SG66             | [Reserved]   |
| SG67             | Stow “separated from” division 1.4 and “separated longitudinally by an intervening complete compartment or hold from” divisions 1.1, 1.2, 1.3, 1.5 and 1.6 except from explosives of compatibility group J.  |
| SG68             | If flashpoint 60°C c.c. or below, segregation as for class 3 but “away from” class 4.1.  |
| SG69             | For AEROSOLS with a maximum capacity of 1 L: segregation as for class 9.<br>Stow “separated from” class 1 except for division 1.4.<br>For AEROSOLS with a capacity above 1 L: segregation as for the appropriate subdivision of class 2.<br>For WASTE AEROSOLS: segregation as for the appropriate subdivision of class 2. |
| SG70             | For arsenic sulphides, “separated from” SGG1 – acids.  |
| SG71             | Within the appliance, to the extent that the dangerous goods are integral parts of the complete life-saving appliance, there is no need to apply the provisions on segregation of substances in chapter 7.2.   |
| SG72             | See tables in 7.2.6.3.   |
| SG73             | [Reserved]   |
| SG74             | Segregation as for 1.4G.   |
| SG76             | Segregation as for class 7.  |
| SG77             | Segregation as for class 8. However, in relation to class 7, no segregation needs to be applied.   |
| SG78             | Stow “separated longitudinally by an intervening complete compartment or hold from” division 1.1, 1.2, and 1.5.  |

Annex  
Segregation flow chart

The use of this chart is not mandatory and is provided for information purposes only.

## Part 7 – Provisions concerning transport operations

### Examples

The following examples only illustrate the process of segregation. Subsequent additional provisions of this Code may apply (e.g. 7.3.4).

- 1 Segregation of 300 kg of celluloid, scrap (UN 2002) in one drum and 200 L of epibromohydrin (UN 2558) in one drum.
  - .1 According to the Dangerous Goods List, UN 2002 is class 4.2, PG III, and UN 2558 is class 6.1, PG I and has a subsidiary hazard of class 3.
  - .2 Neither are exempted by 3.4, 3.5, 7.2.6.3 or 7.2.6.5.
  - .3 There are no specific segregation requirements for these substances in column 16b of the Dangerous Goods List.
  - .4 According to the segregation table given in 7.2.4 for classes 4.2 and 6.1, the intersecting box shows number 1, whereas for classes 4.2 and 3, the intersecting box shows a number 2. The value 2 is the more stringent, therefore the substances are required to be “separated from” one another.
- 2 Segregation of 50 kg of potassium perchlorate (UN 1489) in one drum and 50 kg of nickel cyanide (UN 1653) in one drum.
  - .1 According to the Dangerous Goods List, UN 1489 is class 5.1, PG II and UN 1653 is class 6.1, PG II.
  - .2 Neither are exempted by 3.4, 3.5, 7.2.6.3 or 7.2.6.5.
  - .3 For UN 1489, column 16b of the Dangerous Goods List states “SG38” (“separated from” ammonium compounds other than AMMONIUM PERSULPHATE (UN 1444)) and “SG49” (“separated from” cyanides).
  - .4 For UN 1653, column 16b of the Dangerous Goods List states “SG35” (“separated from” acids).
  - .5 According to the segregation table given in 7.2.4 for classes 5.1 and 6.1, the intersecting box shows an “1”.
  - .6 According to the segregation groups in section 3.1.4, UN 1653 is listed in group 6 (cyanides).
  - .7 Therefore, the substances are required to be “separated from” one another.
- 3 Segregation of 10 kg of acetone (UN 1090) in one box and 20 kg of ethyldichlorosilane (UN 1183) in another box.
  - .1 According to the Dangerous Goods List, UN 1090 is class 3, PG II.
  - .2 According to the Dangerous Goods List, UN 1183 is class 4.3, PG I and has subsidiary hazards of classes 3 and 8.
  - .3 Neither are exempted by 3.4, 3.5, 7.2.6.3 or 7.2.6.5.
  - .4 UN 1090 has no specific segregation requirements in column 16b.
  - .5 For UN 1183, column 16b of the Dangerous Goods List states “SG5” (segregation as for class 3), “SG8” (“away from” class 4.1), “SG13” (“away from” class 8), “SG25” (“separated from” goods of classes 2.1 and 3) and “SG26” (in addition: from goods of classes 2.1 and 3 when stowed on deck of a containership a minimum distance of two container spaces athwartship shall be maintained, when stowed on ro-ro ships a distance of 6 m athwartship shall be maintained).
  - .6 According to the segregation table given in 7.2.4, the intersecting box shows an “X” for classes 3 and 3, but as UN 1183 is required to be “separated from” class 3, the substances are required to be “separated from” one another. In addition, when these substances are stowed on deck of a containership a minimum distance of two container spaces athwartship shall be maintained, and when they are stowed on ro-ro ships a distance of 6 m athwartship shall be maintained.
- 4 Segregation of 10 kg of adhesives (UN 1133, PG III) in limited quantities and 40 kg of beryllium nitrate (UN 2464) in the same freight container.
  - .1 According to the Dangerous Goods List, UN 1133 is class 3, PG III.
  - .2 According to the Dangerous Goods List, UN 2464 is class 5.1, PG II and has a subsidiary hazard of class 6.1.
  - .3 According to section 3.4, UN 1133 in limited quantities is exempted from the segregation provisions of part 7.
  - .4 Therefore, no segregation requirements shall apply.

## Chapter 7.3

---

### *Consigning operations concerning the packing and use of cargo transport units (CTUs) and related provisions*

#### 7.3.1 Introduction

This chapter contains the provisions appropriate to those responsible for the consignment operations in the dangerous goods transport supply chain, including provisions relating to packing of dangerous goods into cargo transport units.

#### 7.3.2 General provisions for cargo transport units

7.3.2.1 Packages containing dangerous goods shall only be loaded in cargo transport units that are strong enough to withstand the shocks and loadings normally encountered during transport, having regard to the conditions to be expected during the anticipated journey. The cargo transport unit shall be constructed in such a way as to prevent the loss of contents. Where appropriate, the cargo transport unit shall be fitted with devices to facilitate securing and handling of the dangerous goods. The cargo transport units shall be adequately maintained.

7.3.2.2 Unless otherwise specified, the applicable provisions of the *International Convention for Safe Containers, 1972* (CSC Convention), as amended, shall be followed for the use of any cargo transport unit which meets the definition of a “container” within the terms of that Convention.

7.3.2.3 The *International Convention for Safe Containers, 1972* (CSC Convention) does not apply to offshore containers that are handled in open seas. The design and testing of offshore containers shall take into account the dynamic lifting and impact forces that may occur when a container is handled in open seas in adverse weather and sea conditions. The requirements for such containers shall be determined by the approving competent authority. Such provisions should be based on the *Guidelines for the approval of offshore containers handled in open seas* (MSC/Circ.860). Such containers shall be clearly marked with the words “OFFSHORE CONTAINER” on the safety approval plate.

#### 7.3.3 Packing of cargo transport units\*

7.3.3.1 Prior to the use of a cargo transport unit it shall be checked to ensure that it is apparently fit for its intended purpose.†

7.3.3.2 The interior and exterior of a cargo transport unit shall be inspected prior to loading to ensure that there is no damage that could affect its integrity or that of the packages to be loaded in it.

7.3.3.3 Packages shall be examined and any found to be damaged, leaking or sifting shall not be packed into a cargo transport unit. Care shall be taken to see that excessive water, snow, ice or foreign matter adhering to packages is removed before packing into a cargo transport unit. Whenever the handling provision “keep as dry as reasonably practicable” (H1) is assigned in column 16a of the Dangerous Goods List, the cargo transport unit including any contained goods, securing or packing materials shall be kept as dry as reasonably practicable.

7.3.3.4 Drums containing dangerous goods shall always be stowed in an upright position unless otherwise authorized by the competent authority.

7.3.3.5 Cargo transport units shall be loaded in accordance with 7.3.4, so that incompatible dangerous or other goods are segregated. Specific loading instructions such as orientation arrows, not to be double stacked, keep dry or temperature control requirements shall be met. Liquid dangerous goods shall be loaded below dry dangerous goods whenever possible.

\* See CTU Code.

† For safety approval plates and maintenance and examination of containers see *International Convention for Safe Containers, 1972* (CSC Convention), as amended, annex I, regulations 1 and 2 (see 1.1.2.3).

**Part 7 – Provisions concerning transport operations**

- 7.3.3.6** Packages containing dangerous goods and unpackaged dangerous articles shall be secured by suitable means capable of restraining the goods (such as fastening straps, sliding slatboards, adjustable brackets) in the cargo transport unit in a manner that will prevent any movement during transport which would change the orientation of the packages or cause them to be damaged. When dangerous goods are transported with other goods (e.g. heavy machinery or crates), all goods shall be securely fixed or packed in the cargo transport units so as to prevent the release of dangerous goods. Movement of packages may also be prevented by filling any voids by the use of dunnage or by blocking and bracing. Where restraints such as banding or straps are used, these shall not be over-tightened to cause damage or deformation of the package or the securing points (such as D-rings) within the cargo transport unit. The packages shall be packed in such a way that there will be a minimum likelihood of damage to fittings during transport. Such fittings on packages shall be adequately protected. Where restraints such as banding or straps with integral container fittings are used, care should be taken to ensure that the Maximum Securing Load (*MSL*) of the fittings is not exceeded.
- 7.3.3.7** Packages shall not be stacked unless designed for that purpose. Where packages of different stacking designs are to be loaded together, consideration shall be given to their compatibility for stacking with each other. Where necessary, stacked packages shall be prevented from damaging the package below by the use of load bearing devices.
- 7.3.3.8** Cargo shall be entirely contained within the cargo transport unit without overhang or projections. Oversized machinery (such as tractors and vehicles) may overhang or project outside of the cargo transport unit provided that the dangerous goods integral to the machinery cannot leak or spill outside of the cargo transport unit.
- 7.3.3.9** During loading and unloading, packages containing dangerous goods shall be protected from being damaged. Particular attention shall be paid to the handling of packages during their preparation for transport, the type of cargo transport unit to be used for their carriage and to the method of loading or unloading, so that accidental damage is not caused through dragging or mishandling. Packages that appear to be leaking or damaged so that the contents may escape shall not be accepted for transport. If a package is found to be damaged so that the contents leak, the damaged package shall not be transported but moved to a safe place in accordance with instructions given by a competent authority or a designated responsible person who is familiar with the dangerous goods, the risks involved and the measures that should be taken in an emergency.
- Note 1:** Additional operational requirements for the transport of packagings and IBCs are provided in the special packing provisions for packagings and IBCs (see chapter 4.1).
- 7.3.3.10** When a dangerous goods consignment forms only part of the load of a cargo transport unit, it should, whenever possible, be packed adjacent to the doors with marks and labels visible, so as to be accessible in the event of an emergency or to facilitate inspection.
- 7.3.3.11** If the doors of a cargo transport unit are locked, the means of locking shall be such that, in cases of emergency, the doors can be opened without delay.
- 7.3.3.12** When venting is required, venting devices shall be kept clear and operable.
- 7.3.3.13** Cargo transport units containing dangerous goods shall be marked and placarded according to chapter 5.3. Irrelevant marks, labels, placards, orange panels, signs and marine pollutant marks shall be removed, masked or otherwise obliterated before packing a cargo transport unit.
- △ **7.3.3.14** Cargo transport units shall be packed so that the cargo is uniformly distributed.\*
- 7.3.3.15** If goods of class 1 are packed, the cargo transport unit shall comply with the definition in 7.1.2 for closed cargo transport unit for class 1.
- 7.3.3.16** If goods of class 7 are packed, the transport index and, if applicable, the criticality safety index, shall be limited according to 7.1.4.5.3.
- 7.3.3.17** Those responsible for the packing of dangerous goods into a cargo transport unit shall provide a “container/vehicle packing certificate” (see 5.4.2). This document is not required for tanks.
- 7.3.3.18** Flexible bulk containers are not allowed to be transported in cargo transport units (see 4.3.4).

**7.3.4 Segregation provisions within cargo transport units**

- 7.3.4.1** Dangerous goods which have to be segregated from each other according to the provisions in chapter 7.2 shall not be transported in the same cargo transport unit with the exception of dangerous goods which shall be segregated “away from” each other which may be transported in the same cargo transport unit with the approval of the competent authority. In such cases an equivalent standard of safety shall be maintained.

\* Refer to the CTU Code.

#### 7.3.4.2 Segregation in relation to foodstuffs

7.3.4.2.1 Dangerous goods having a primary or subsidiary hazard of classes 2.3, 6.1, 6.2, 7 (with the exception of UN 2908, 2909, 2910 and 2911), 8 and dangerous goods for which it is referred to in segregation code SG29 or SG50 in column 16b of the Dangerous Goods List shall not be transported together with foodstuffs (see 1.2.1) in the same cargo transport unit.

7.3.4.2.2 Notwithstanding the provisions in 7.3.4.2.1, the following dangerous goods may be transported with foodstuffs provided that they are not loaded within 3 m from foodstuffs:

- .1 dangerous goods of packing group III of classes 6.1 and 8;
- .2 dangerous goods of packing group II of class 8; and
- .3 any other dangerous goods of packing group III with a subsidiary hazard of classes 6.1 or 8; and
- .4 dangerous goods having a reference to 7.3.4.2.2 in column 16b of the Dangerous Goods List.

#### 7.3.5 Tracking and monitoring equipment

When security devices, beacons or other tracking or monitoring equipment are used, they shall be securely installed to the cargo transport unit and shall be of a certified safe type\* for the dangerous goods that will be carried within the cargo transport unit.

#### 7.3.6 Opening and unloading cargo transport units

7.3.6.1 Cargo transport units shall be approached with caution. Before opening the doors, the nature of the contents and the possibility that leakages may have caused an unsafe condition, concentration of toxic or flammable vapours, or an oxygen-enriched or oxygen-depleted atmosphere, shall be considered.

7.3.6.2 After a cargo transport unit carrying dangerous goods has been unpacked or unloaded, precautions shall be taken to ensure that there is no contamination likely to make the cargo transport unit dangerous.

7.3.6.3 After unpacking or unloading corrosive substances, particular attention shall be paid to cleaning, as residues may be highly corrosive to the metal structures.

7.3.6.4 When the cargo transport unit offers no further hazard, the dangerous goods placards and other marks related to dangerous goods shall be removed, masked or otherwise obliterated.

#### 7.3.7 Cargo transport units under temperature control

##### 7.3.7.1 Preamble

7.3.7.1.1 If the temperature of certain substances (such as organic peroxides and polymerizing or self-reactive substances) exceeds a value which is typical of the substance as packaged for transport, a self-accelerating decomposition or polymerization possibly of explosive violence, may result. To prevent such decomposition or polymerization, it is necessary to control the temperature of such substances during transport. Other substances not requiring temperature control for safety reasons may be transported under controlled temperature conditions for commercial reasons.

7.3.7.1.2 The provisions for the temperature control of certain specified substances are based on the assumption that the temperature in the immediate surroundings of the cargo does not exceed 55°C during transport and attains this value for a relatively short time only during each period of 24 h.

\* Refer to the Recommendations published by the International Electrotechnical Commission, in particular, to publication IEC 60079.

**Part 7 – Provisions concerning transport operations**

**7.3.7.2 General provisions**

**7.3.7.2.1** Where a number of packages containing self-reactive substances, organic peroxides and polymerizing substances are loaded in a closed cargo transport unit, the total quantity of substance, the type and number of packages and the stacking arrangement shall not create an explosion hazard.

**7.3.7.2.2** These provisions apply to certain self-reactive substances when required by 2.4.2.3.4, and certain organic peroxides when required by 2.5.3.4.1 and certain polymerizing substances when required by 2.4.2.5.2 or special provision 386 of chapter 3.3 which may only be transported under conditions where the temperature is controlled.

**7.3.7.2.3** These provisions also apply to the transport of substances for which:

- .1 the proper shipping name as indicated in column 2 of the Dangerous Goods List of chapter 3.2 or according to 3.1.2.6 contains the words “TEMPERATURE CONTROLLED”; and
- .2 the self-accelerating decomposition temperature (SADT) or the self-accelerating polymerization temperature (SAPT) determined for the substance (with or without chemical stabilization) as offered for transport is:
  - .1 50°C or less for single packagings and IBCs; or
  - .2 45°C or less for portable tanks.

When chemical inhibition is not used to stabilize a reactive substance which may generate dangerous amounts of heat and gas, or vapour, under normal transport conditions, these substances need to be transported under temperature control. These provisions do not apply to substances which are stabilized by the addition of chemical inhibitors such that the SADT or the SAPT is greater than that prescribed in paragraphs 7.3.7.2.3.2.1 or 7.3.7.2.3.2.2.

**7.3.7.2.4** In addition, if a self-reactive substance or organic peroxide or a substance the proper shipping name of which contains the word “STABILIZED” and which is not normally required to be transported under temperature control is transported under conditions where the temperature may exceed 55°C, it may require temperature control.

**7.3.7.2.5** The “control temperature” is the maximum temperature at which the substance can be safely transported. In the event of loss of temperature control, it may be necessary to implement emergency procedures. The “emergency temperature” is the temperature at which such procedures shall be implemented.

**7.3.7.2.6 Derivation of control and emergency temperatures**

| Type of receptacle        | SADT <sup>a</sup> /SAPT <sup>a</sup>           | Control temperature  | Emergency temperature   |
|---------------------------|--|--|---|
| Single packagings and IBC | 20°C or less<br>over 20°C to 35°C<br>over 35°C | 20°C below SADT/SAPT<br>15°C below SADT/SAPT<br>10°C below SADT/SAPT | 10°C below SADT/SAPT<br>10°C below SADT/SAPT<br>5°C below SADT/SAPT |
| Portable tanks            | ≤ 45°C   | 10°C below SADT/SAPT   | 5°C below SADT/SAPT   |

<sup>a</sup> i.e. the SADT/SAPT of the substance as packed for transport.

**7.3.7.2.7** The control and emergency temperatures are derived using the table in 7.3.7.2.6 from the self-accelerating decomposition temperature (SADT) or from the self-accelerating polymerization temperature (SAPT) which are defined as the lowest temperatures at which self-accelerating decomposition or self-accelerating polymerization may occur with a substance in the packaging, IBC or portable tank as used in transport. An SADT or SAPT shall be determined in order to decide if a substance shall be subjected to temperature control during transport. Provisions for the determination of the SADT and SAPT are given in 2.4.2.3.4, 2.5.3.4.2 and 2.4.2.5.2 for self-reactive substances, organic peroxides and polymerizing substances and mixtures, respectively.

**7.3.7.2.8** Control and emergency temperatures, where appropriate, are provided for currently assigned self-reactive substances in 2.4.2.3.2.3 and for currently assigned organic peroxide formulations in 2.5.3.2.4.

**7.3.7.2.9** The actual transport temperature may be lower than the control temperature but shall be selected so as to avoid dangerous separation of phases.

**7.3.7.3 Transport under temperature control**

**7.3.7.3.1** Prior to the use of cargo transport unit, the refrigeration system shall be subjected to a thorough inspection and a test to ensure that all parts are functioning properly.

**7.3.7.3.2** Refrigerant gas shall only be replaced in accordance with the manufacturer’s operating instructions for the refrigeration system. Prior to filling replacement refrigerant gas, a certificate of analysis from the supplier shall be obtained and checked to confirm that the gas meets refrigeration system specifications. In addition,

## Chapter 7.3 – Consigning operations concerning the packing and use of CTUs

if concerns about the integrity of the supplier and/or the refrigerant gas supply chain give rise to suspicion of contamination of the gas, the replacement refrigerant gas shall be checked for possible contamination prior to use. If the refrigerant gas is found to be contaminated, it shall not be used, the cylinder shall be plainly marked "CONTAMINATED", the cylinder shall be sealed and sent for recycling or disposal, and notification shall be given to the refrigerant gas supplier and authorized distributor and competent authority(ies) of the countries in which the supplier and distributor reside, as appropriate. The date of last refrigerant replacement shall be included in the maintenance record of the refrigeration system.

**Note:** Contamination can be checked by using flame halide lamp tests, gas sniffer tube tests or gas chromatography. Replacement refrigerant gas cylinders may be marked with the test result and the date of testing.

- 7.3.7.3.3 When a cargo transport unit is to be filled with packages containing substances having different control temperatures, all packages shall be pre-cooled to avoid exceeding the lowest control temperature.
- 7.3.7.3.3.1 In the event that non-temperature-controlled substances are transported in the same cargo transport unit as temperature controlled substances, the package(s) containing substances that require refrigeration shall be stowed in such a way as to be readily accessible from the door(s) of the cargo transport unit.
- 7.3.7.3.3.2 If substances with different control temperatures are loaded in the cargo transport unit, the substances with the lowest control temperature shall be stowed in the most readily accessible position from the doors of the cargo transport unit.
- 7.3.7.3.3.3 The door(s) shall be capable of being opened readily in case of emergency so that the package(s) can be removed. The carrier shall be informed about the location of the different substances within the unit. The cargo shall be secured to prevent packages from falling when the door(s) is (are) opened. The packages shall be securely stowed so as to allow for adequate air circulation throughout the cargo.
- 7.3.7.3.4 The master shall be provided with operating instructions for the refrigeration system, procedures to be followed in the event of loss of control and instructions for regular monitoring of operating temperatures. Spare parts shall be carried for the systems described in 7.3.7.4.2.3, 7.3.7.4.2.4 and 7.3.7.4.2.5 so that they are available for emergency use should the refrigeration system malfunction during transport.
- 7.3.7.3.5 In cases where it may not be possible to carry specific substances according to the general provisions, full details of the proposed method of shipment shall be submitted to the competent authority concerned for approval.
- 7.3.7.4 **Methods of temperature control**
- 7.3.7.4.1 The suitability of a particular means of temperature control for transport depends on a number of factors. Among those to be considered are:
- .1 the control temperature(s) of the substance(s) to be transported;
  - .2 the difference between the control temperature and the anticipated ambient temperature conditions;
  - .3 the effectiveness of the thermal insulation of the cargo transport unit. The overall heat transfer coefficient shall not be more than 0.4 W/(m<sup>2</sup>·K) for cargo transport units and 0.6 W/(m<sup>2</sup>·K) for tanks; and
  - .4 the duration of the voyage.
- 7.3.7.4.2 Suitable methods for preventing the control temperature being exceeded are, in order of increasing capability:
- .1 thermal insulation, provided that the initial temperature of the substance is sufficiently below the control temperature;
  - .2 thermal insulation with a cooling method, provided that:
    - an adequate quantity of non-flammable coolant (such as liquid nitrogen or solid carbon dioxide), allowing a reasonable margin for delay, is carried;
    - liquid oxygen or air is not used as a coolant;
    - there is a uniform cooling effect even when most of the coolant has been consumed; and
    - the need to ventilate the cargo transport unit before entering is clearly indicated by a warning on the door(s) (see 5.5.3);
  - .3 single mechanical refrigeration, provided that the unit is thermally insulated and, for substances with a flashpoint lower than the sum of the emergency temperature plus 5°C, explosion proof electrical fittings are used within the cooling compartment to prevent ignition of flammable vapours from the substances;

**Part 7 – Provisions concerning transport operations**

- .4 combined mechanical refrigeration system and cooling method, provided that:
    - the two systems are independent of one another; and
    - the provisions of 7.3.7.4.2.2 and 7.3.7.4.2.3 are met;
  - .5 dual mechanical refrigeration system, provided that:
    - apart from the integral power supply unit, the two systems are independent of one another;
    - each system alone is capable of maintaining adequate temperature control; and
    - for substances with a flashpoint lower than the sum of the emergency temperature plus 5°C, explosion proof electrical fittings are used within the coolant compartment to prevent ignition of flammable vapours from the substances.
- 7.3.7.4.3** The refrigeration equipment and its controls shall be readily and safely accessible and all electrical connections weatherproof. Inside the cargo transport unit, the temperature shall be measured continuously. The measurement shall be taken in the air space of the unit, using two measuring devices independent of each other. The type and place of the measuring devices shall be selected so that their results are representative of the actual temperature in the cargo. At least one of the two measurements shall be recorded in such a manner that temperature changes are easily detectable. The temperature shall be checked every four to six hours and logged.
- 7.3.7.4.4** If substances are transported with a control temperature less than +25°C, the cargo transport unit shall be equipped with a visible and audible alarm effectively set at no higher than the control temperature. The alarms shall work independently from the power supply of the refrigeration system.
- 7.3.7.4.5** If an electrical supply is necessary for the cargo transport unit to operate the refrigeration or heating equipment, it shall be ensured that the correct connecting plugs are fitted. For under deck stowage, plugs shall, as a minimum, be of an IP 55 enclosure in accordance with IEC Publication 60529, with the specification for electrical equipment of temperature class T4 and explosion group IIB. However, when stowed on deck, these plugs shall be of an IP 56 enclosure in accordance with IEC Publication 60529.
- 7.3.7.5 Special provisions for self-reactive substances, organic peroxides and polymerizing substances**
- 7.3.7.5.1** For self-reactive substances (class 4.1) identified by UN Nos. 3231 and 3232 and organic peroxides (class 5.2) identified by UN Nos. 3111 and 3112, one of the following methods of temperature control described in 7.3.7.4.2 shall be used:
- .1 the methods referred to under 7.3.7.4.2.4 or 7.3.7.4.2.5; or
  - .2 the method referred to under 7.3.7.4.2.3 when the maximum ambient temperature to be expected during transport is at least 10°C below the control temperature.
- 7.3.7.5.2** For self-reactive substances (class 4.1) identified by UN Nos. 3233 to 3240, organic peroxides (class 5.2) identified by UN Nos. 3113 to 3120 and polymerizing substances identified by UN Nos. 3533 and 3534 or for those substances where the words “TEMPERATURE CONTROLLED” are added as part of the proper shipping name in accordance with 3.1.2.6.2, one of the following methods shall be used:
- .1 the methods referred to under 7.3.7.4.2.4 or 7.3.7.4.2.5;
  - .2 the method referred to under 7.3.7.4.2.3 when the maximum ambient temperature to be expected during transport does not exceed the control temperature by more than 10°C; or
  - .3 for short international voyages only (see 1.2.1), the methods referred to under 7.3.7.4.2.1 and 7.3.7.4.2.2 when the maximum ambient temperature to be expected during transport is at least 10°C below the control temperature.
- 7.3.7.6 Special provisions for flammable gases or liquids having a flashpoint less than 23°C c.c. transported under temperature control**
- 7.3.7.6.1** When flammable gases or liquids having a flashpoint less than 23°C c.c. are packed or loaded in a cargo transport unit equipped with a refrigerating or heating system, the cooling or heating equipment shall comply with 7.3.7.4.
- 7.3.7.6.2** When flammable liquids having a flashpoint less than 23°C c.c. and not requiring temperature control for safety reasons are transported under temperature control conditions for commercial reasons, explosion proof electrical fittings are required except when the substances are pre-cooled to and transported at a control temperature of at least 10°C below the flashpoint. In case of failure of a non-explosion proof refrigerating system, the system shall be disconnected from the power supply. It shall not be reconnected if the temperature has risen to a temperature less than 10°C below the flashpoint.
- 7.3.7.6.3** When flammable gases not requiring temperature control for safety reasons are transported under temperature control conditions for commercial reasons, explosion proof electrical fittings are required.

**7.3.7.7 Special provisions for vehicles transported on ships**

Insulated, refrigerated and mechanically refrigerated vehicles shall conform to the provisions of 7.3.7.4 and 7.3.7.5 as appropriate. In addition, the refrigerating appliance of a mechanically refrigerated vehicle shall be capable of operating independently of the engine used to propel the vehicle.

**7.3.7.8 Approval**

The competent authority may approve that less stringent means of temperature control may be used or that artificial refrigeration may be dispensed with under conditions of transport such as short international voyages or low ambient temperatures.

**7.3.8 Loading of cargo transport units on board ships**

Before loading, cargo transport units used for the transport of dangerous goods shall be examined for external signs of damage, leakage or sifting of contents. Any cargo transport unit found to be damaged, leaking or sifting shall not be loaded on to a ship until repairs have been effected or damaged packages have been removed.

## Chapter 7.4

### *Stowage and segregation on containerships*

**Note:** To facilitate familiarization with these requirements and to support training of relevant personnel, illustrations applicable to the segregation requirements on containerships are given in MSC.1/Circ.1440.

#### 7.4.1 Introduction

7.4.1.1 The provisions of this chapter apply to the stowage and segregation of containers which meet the definition of a container within the terms of the *International Convention for Safe Containers, 1972* (CSC Convention), as amended, which are transported on deck and in the cargo holds of containerships or on deck and in the cargo holds of other types of ships provided that these stowage positions are properly fitted to give a permanent stowage of containers during transport.

7.4.1.2 For ships carrying containers in conventional cargo spaces not properly fitted for the permanent stowage of containers the provisions of chapter 7.6 apply.

7.4.1.3 For stowage of FISH MEAL, UNSTABILIZED (UN 1374), FISH MEAL, STABILIZED (UN 2216) and KRILL MEAL (UN 3497) in containers, the provisions of 7.6.2.7.2.2 also apply.

7.4.1.4 For stowage of AMMONIUM NITRATE (UN 1942), AMMONIUM NITRATE BASED FERTILIZER (UN 2067 AND 2071) in containers, the applicable provisions of 7.6.2.8.4 and 7.6.2.11.1 also apply.

#### 7.4.2 Stowage requirements

##### 7.4.2.1 Provisions for hatchless containerships

Dangerous goods shall only be transported in or vertically above hatchless container holds if:

- .1 the dangerous goods are permitted for under deck stowage as specified in the Dangerous Goods List; and
- .2 the hatchless container hold is in full compliance with the provisions of regulation II-2/19 of SOLAS, as amended, or regulation II-2/54 of SOLAS, as amended by the resolutions indicated in II-2/1.2.1, as applicable.

##### 7.4.2.2 Provisions for ships with partially weathertight hatchway covers

###### 7.4.2.2.1 Provisions for partially weathertight hatchway covers with effective gutterbars\*

7.4.2.2.1.1 Partially weathertight hatchway covers fitted with *effective gutterbars*\* can be regarded as “resistant to fire and liquid” for the purpose of stowage and segregation of containers containing dangerous goods on containerships fitted with such hatchway covers. Additionally segregation requirements shall be in accordance with the requirements in paragraph 7.4.3.2.

7.4.2.2.1.2 When “not in the same vertical line unless separated by a deck” is required, containers containing dangerous goods shall not be stowed in any tier directly above a *clear gap*\* unless the cargo hold complies with the relevant requirements for the class and flashpoint of the dangerous goods in regulation II-2/19 of SOLAS 74, as amended, or regulation II-2/54 of SOLAS, as amended by resolutions indicated in II-2/1.2.1, as applicable. Additionally, containers containing incompatible dangerous goods shall not be stowed within the relevant *sensitive vertical lines*\* under deck.

###### 7.4.2.2.2 Provisions for partially weathertight hatchway covers without effective gutterbars\*

7.4.2.2.2.1 Where hatchway covers are *not fitted with effective gutterbars*, containers containing dangerous goods shall not be stowed on such hatchway covers, unless the cargo hold complies with the relevant requirements

\* For definitions and details see MSC/Circ.1087 found in the IMDG Code Supplement.

for the class and flashpoint of the dangerous goods in regulation II-2/19 of SOLAS 74, as amended, or regulation II-2/54 of SOLAS, as amended by the resolutions indicated in II-2/1.2.1, as applicable.

7.4.2.2.2.2 Where hatchway covers are not fitted with *effective gutterbars*,\* the following applies where stowage “not in the same vertical line” is required in 7.4.3.3.

7.4.2.2.2.3 When containers containing dangerous goods are stowed on deck, containers containing incompatible dangerous goods shall not be stowed within the relevant *sensitive vertical lines*\* of any *clear gap*\* on either side of the hatchway cover below deck.

7.4.2.2.2.4 When containers containing dangerous goods are stowed below deck within the relevant sensitive vertical lines of a clear gap, containers with incompatible dangerous goods shall not be stowed on the hatches above the hold.\*

#### 7.4.2.3 Provisions for containers with flammable gases and highly flammable liquids

7.4.2.3.1 In cargo ships of 500 gross tons or over and passenger ships constructed before 1 September 1984, and in cargo ships of less than 500 gross tons constructed before 1 February 1992, containers with flammable gases or with flammable liquids having a flashpoint of less than 23°C c.c, shall be stowed on deck only, unless otherwise approved by the Administration.

7.4.2.3.2 A container with flammable gases or flammable liquids having a flashpoint of less than 23°C c.c transported on deck shall be stowed at least 2.4 m horizontally and projected vertically away from any potential source of ignition.

7.4.2.3.3 A container under temperature control that is not of a certified safe type shall not be stowed under deck together with containers containing flammable gases or with liquids having a flashpoint of less than 23°C c.c.

#### 7.4.2.4 Ventilation provisions

7.4.2.4.1 In cargo ships of 500 gross tons or over and passenger ships constructed before 1 September 1984, and in cargo ships of less than 500 gross tons constructed before 1 February 1992, containers with the following dangerous goods may be stowed under deck only if the cargo space is equipped with mechanical ventilation and if under deck stowage is permitted in the Dangerous Goods List:

- dangerous goods of class 2.1;
- dangerous goods of class 3 with a flashpoint of less than 23°C c.c.;
- dangerous goods of class 4.3;
- dangerous goods of class 6.1 with a subsidiary hazard of class 3;
- dangerous goods of class 8 with a subsidiary hazard of class 3; and
- dangerous goods to which a specific stowage requirement requiring mechanical ventilation in column 16a of the Dangerous Goods List is assigned.

Otherwise containers shall be stowed on deck only.

7.4.2.4.2 The capacity of the mechanical ventilation (number of air changes per hour) shall be to the satisfaction of the Administration.

### 7.4.3 Segregation requirements

#### 7.4.3.1 Definition and application

7.4.3.1.1 *Container space* means a distance of not less than 6 m fore and aft or not less than 2.4 m athwartships.

7.4.3.1.2 The provisions for segregation between containers on board containerships with closed cargo holds and on board hatchless containerships are given in the tables in 7.4.3.2 and 7.4.3.3, respectively.

\* For definitions and details see MSC/Circ.1087 found in the IMDG Code Supplement.

Part 7 – Provisions concerning transport operations

7.4.3.2 Table of segregation of containers on board container ships with closed cargo holds

| Segregation requirement   | Vertical  |   | Horizontal                          |   |                                     |                                     |                                     |                                     |
|---|---|---|-------------------------------------|---|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|
|   | Closed versus closed                                      | Open versus open  | Closed versus closed                |   | Open versus open                    |                                     | Open versus open                    |                                     |
|   |   |   | On deck                             | Under deck  | On deck                             | Under deck                          | On deck                             | Under deck                          |
| "Away from"<br>.1   | One on top of the other permitted                         | Open on top of closed permitted                           | No restriction                      | No restriction  | No restriction                      | No restriction                      | One container space                 | One container space or one bulkhead |
|   | Otherwise as for "open versus open"                       | Not in the same vertical line unless segregated by a deck | No restriction                      | No restriction  | No restriction                      | No restriction                      | One container space                 | One container space                 |
| "Separated from"<br>.2  | Not in the same vertical line unless segregated by a deck | As for "open versus open"                                 | One container space                 | One container space or one bulkhead                   | One container space                 | One container space or one bulkhead | One container space                 | One bulkhead                        |
|   |   |   | One container space                 | One container space                                   | One container space                 | Two container spaces                | Two container spaces                | One bulkhead                        |
| "Separated by a complete compartment or hold from"<br>.3                              | Not in the same vertical line unless segregated by a deck | As for "open versus open"                                 | One container space                 | One container space                                   | One container space                 | One container space                 | Two container spaces                | Two bulkheads                       |
|   |   |   | Two container spaces                | One bulkhead  | One container space                 | One bulkhead                        | Three container spaces              | Two bulkheads                       |
| "Separated longitudinally by an intervening complete compartment or hold from"<br>.4* | Prohibited  | Prohibited  | Minimum horizontal distance of 24 m | One bulkhead and minimum horizontal distance of 24 m* | Minimum horizontal distance of 24 m | Two bulkheads                       | Minimum horizontal distance of 24 m | Two bulkheads                       |
|   |   |   | Prohibited                          | Prohibited  | Prohibited                          | Prohibited                          | Prohibited                          | Prohibited                          |

\* Containers not less than 6 m from intervening bulkhead.

**Note:** All bulkheads and decks shall be resistant to fire and liquids.

7.4.3.3 Table of segregation of containers on board hatchless containerships

| Segregation requirement  | Vertical                          |   |                               | Horizontal  |   |  |   |   |                                     |
|--|-----------------------------------|---|-------------------------------|---|---|--|---|---|-------------------------------------|
|  | Closed versus closed              | Closed versus open  | Open versus open              | Closed versus closed  |   | Closed versus open                                   |   | Open versus open  |                                     |
|  |                                   |   |                               | On deck   | Under deck  | On deck  | Under deck  | On deck   | Under deck                          |
| "Away from"<br>.1  | One on top of the other permitted | Open on top of closed permitted otherwise as for "open versus open" |                               | No restriction  | No restriction  | No restriction                                       | No restriction  | One container space   | One container space or one bulkhead |
| "Separated from"<br>.2   |                                   |   |                               | No restriction  | No restriction  | One container space or one bulkhead                  | One container space   | One container space   | One container space                 |
| "Separated by a complete compartment or hold from"<br>.3                             | Not in the same vertical line     | As for "open versus open"   | Not in the same vertical line | One container space   | One container space   | One container space                                  | Two container spaces  | Two container spaces and not in or above same hold                | Two bulkheads                       |
| "Separated longitudinally by an intervening complete compartment or hold from"<br>.4 |                                   | Prohibited  |                               | Two container spaces and not in or above same hold                | Two container spaces and not in or above same hold                | One bulkhead   | One bulkhead  | Three container spaces and not in or above same hold              | Two bulkheads                       |
|  |                                   |   |                               | Minimum horizontal distance of 24 m and not in or above same hold | Minimum horizontal distance of 24 m and not in or above same hold | One bulkhead and minimum horizontal distance of 24 m | Minimum horizontal distance of 24 m and not in or above same hold | Minimum horizontal distance of 24 m and not in or above same hold | Two bulkheads                       |
|  |                                   |   |                               | Prohibited  | Prohibited  | Prohibited   | Prohibited  | Prohibited  | Prohibited                          |

\* Containers not less than 6 m from intervening bulkhead.

**Note:** All bulkheads and decks shall be resistant to fire and liquids.

## Chapter 7.5

### *Stowage and segregation on ro-ro ships*

**Note:** To facilitate familiarization with these requirements and to support training of relevant personnel, illustrations applicable to the segregation requirements on ro-ro ships are given in MSC.1/Circ.1440.

#### 7.5.1 Introduction

7.5.1.1 The provisions of this chapter apply to the stowage and segregation of cargo transport units which are transported in ro-ro cargo spaces.

7.5.1.2 For ro-ro ships which incorporate stowage positions which are properly fitted to give a permanent stowage of containers during transport, the provisions of chapter 7.4 apply for containers carried in these spaces.

7.5.1.3 For ro-ro ships which incorporate conventional cargo spaces, the provisions of chapter 7.6 apply in these spaces.

7.5.1.4 In case more than one container is loaded on the same chassis in a ro-ro cargo space, the segregation of chapter 7.4 applies between the containers.

#### 7.5.2 Stowage provisions

7.5.2.1 Loading and unloading operations on each ro-ro cargo space shall take place under the supervision of either a working party consisting of officers and other crew members or responsible persons appointed by the master.

7.5.2.2 During the voyage, access to such spaces by passengers and other unauthorized persons shall only be permitted when such persons are accompanied by an authorized crew member.

7.5.2.3 All doors leading directly to these spaces shall be securely closed during the voyage and notices or signs prohibiting entrance to such spaces shall be conspicuously displayed.

7.5.2.4 The transport of dangerous goods shall be prohibited in any ro-ro cargo space in which the foregoing provisions cannot be met.

7.5.2.5 Closing arrangements for the openings between ro-ro cargo spaces and machinery and accommodation spaces shall be such as to avoid the possibility of dangerous vapours and liquids entering such spaces. Such openings shall normally be kept securely closed when dangerous cargo is on board, except to permit access by authorized persons or for emergency use.

7.5.2.6 Dangerous goods required to be carried on deck only shall not be carried in closed ro-ro cargo spaces, but may be carried in open ro-ro cargo spaces when authorized by the Administration.

7.5.2.7 Flammable gases or liquids having a flashpoint of less than 23°C c.c. shall not be stowed in a closed ro-ro cargo space or special category space on a passenger ship unless:

- the design, construction and equipment of the space comply with the provisions of regulation II-2/19 of SOLAS, as amended, or regulation II-2/54 of SOLAS, as amended by the resolutions indicated in II-2/1.2.1, as applicable, and the ventilation system is operated to maintain at least six air changes per hour; or
- the ventilation system of the space is operated to maintain at least ten air changes per hour and non-certified safe electrical systems in the space are capable of being isolated by means other than removal of fuses in the event of failure of the ventilation system or any other circumstance likely to cause accumulation of flammable vapours.

Otherwise stowage is restricted to *on deck only*.

7.5.2.8 Cargo transport units with flammable gases or liquids having a flashpoint of less than 23°C c.c. and transported on deck shall be stowed at least 3 m from any potential sources of ignition.

- 7.5.2.9 Mechanically operated refrigeration or heating equipment fitted to any cargo transport unit shall not be operated during the voyage when stowed in a closed ro-ro cargo space or a special category space on a passenger ship.
- 7.5.2.10 Electrically operated refrigeration or heating equipment fitted to any cargo transport unit stowed in a closed ro-ro cargo space or special category space on a passenger ship shall not be operated when flammable gases or liquids having a flashpoint of less than 23°C c.c. are present in the cargo transport unit or in the same space, unless:
- the design, construction and equipment of the space comply with the provisions of regulation II-2/19 of SOLAS, as amended, or regulation II-2/54 of SOLAS, as amended by the resolutions indicated in II-2/1.2.1, as applicable; or
  - the ventilation system of the space is operated to maintain at least ten air changes per hour and all electrical systems in the space are capable of being isolated by means other than removal of fuses in the event of ventilation failure or other circumstance likely to cause accumulation of flammable vapours;
  - and, in either case, the refrigeration or heating equipment of the cargo transport unit shall comply with paragraph 7.3.7.6.
- 7.5.2.11 In ships the keel of which was laid before 1 September 1984 and for which regulation II-2/20 of SOLAS, as amended, or regulations II-2/37 and 38 of SOLAS, as amended by the resolutions indicated in II-2/1.2.1, are not applicable to a closed ro-ro cargo space, mechanical ventilation shall be provided to the satisfaction of the Administration. The ventilation fans shall be operating at all times when vehicles are in such spaces.
- 7.5.2.12 If continuous ventilation is impracticable in a closed ro-ro cargo space other than a special category space on a passenger ship, ventilation fans shall be operated daily for a limited period, as weather permits. In any case, prior to discharge, the fans shall be operated for a reasonable period. The ro-ro cargo space shall be proved gas-free at the end of the period. When the ventilation is not continuous, electrical systems which are not certified safe shall be isolated.
- 7.5.2.13 The master of a ship carrying dangerous goods in ro-ro cargo spaces shall ensure that, during loading and unloading operations and during the voyage, regular inspections of these spaces are made by an authorized crew member or responsible person in order to achieve early detection of any hazard.

### 7.5.3 Segregation provisions

7.5.3.1 The provisions for segregation between cargo transport units onboard ro-ro ships are given in the table in 7.5.3.2.

7.5.3.2 Table of segregation of cargo transport units on board ro-ro ships

| Segregation requirement  | Horizontal   |                      |  |                    |                                       |                  |                               |
|--|--------------|----------------------|--|--------------------|---------------------------------------|------------------|-------------------------------|
|  |              | Closed versus closed |  | Closed versus open |                                       | Open versus open |                               |
|  |              | On deck              | Under deck                                 | On deck            | Under deck                            | On deck          | Under deck                    |
| “Away from”<br>.1  | Fore and aft | No restriction       | No restriction                             | No restriction     | No restriction                        | At least 3 m     | At least 3 m                  |
|  | Athwartships | No restriction       | No restriction                             | No restriction     | No restriction                        | At least 3 m     | At least 3 m                  |
| “Separated from”<br>.2   | Fore and aft | At least 6 m         | At least 6 m or one bulkhead               | At least 6 m       | At least 6 m or one bulkhead          | At least 6 m     | At least 12 m or one bulkhead |
|  | Athwartships | At least 3 m         | At least 3 m or one bulkhead               | At least 3 m       | At least 6 m or one bulkhead          | At least 6 m     | At least 12 m or one bulkhead |
| “Separated by a complete compartment or hold from”<br>.3                             | Fore and aft | At least 12 m        | At least 24 m + deck                       | At least 24 m      | At least 24 m + deck                  | At least 36 m    | Two decks or two bulkheads    |
|  | Athwartships | At least 12 m        | At least 24 m + deck                       | At least 24 m      | At least 24 m + deck                  | Prohibited       | Prohibited                    |
| “Separated longitudinally by an intervening complete compartment or hold from”<br>.4 | Fore and aft | At least 36 m        | Two bulkheads or at least 36 m + two decks | At least 36 m      | At least 48 m including two bulkheads | At least 48 m    | Prohibited                    |
|  | Athwartships | Prohibited           | Prohibited                                 | Prohibited         | Prohibited                            | Prohibited       | Prohibited                    |

**Note:** All bulkheads and decks shall be resistant to fire and liquid.

## Chapter 7.6

### *Stowage and segregation on general cargo ships*

#### 7.6.1 Introduction

- 7.6.1.1 The provisions of this chapter apply to the stowage and segregation of dangerous goods stowed in the conventional way on board general cargo ships. They apply also to containers which are transported in conventional cargo spaces, including cargo spaces on the weather deck, not properly fitted to give a permanent stowage of the containers during transport.
- 7.6.1.2 For ships carrying containers in stowage positions which are properly fitted for the permanent stowage of containers the provisions of chapter 7.4 apply.

#### 7.6.2 Stowage and handling provisions

##### 7.6.2.1 Provisions for all classes

- 7.6.2.1.1 The minimum stacking height for testing packagings intended to contain dangerous goods in accordance with chapter 6.1 is 3 m. For IBCs and large packagings, the stacking test load shall be determined in accordance with 6.5.6.6.4 and 6.6.5.3.3.4 respectively.
- 7.6.2.1.2 Drums containing dangerous goods shall always be stowed in an upright position unless otherwise authorized by the competent authority.
- 7.6.2.1.3 The stowage of dangerous goods shall be so arranged as to ensure clear walkways and access to all facilities necessary for the safe working of the ship. When dangerous goods are stowed on deck, hydrants, sounding pipes and the like and access thereto shall be kept free and clear of such goods.
- 7.6.2.1.4 Fibreboard packagings, paper bags and other packages susceptible to water damage shall be stowed *under deck* or, if they are stowed on deck, they shall be so protected that at no time are they exposed to weather or to seawater.
- 7.6.2.1.5 Portable tanks shall not be overstowed by other cargo unless they are designed for that purpose or unless they are protected to the satisfaction of the competent authority.
- 7.6.2.1.6 Cargo spaces and decks shall be clean and dry as relevant to the hazards of the dangerous goods to be carried. In order to reduce the risk of ignition, the space shall be free of dust from other cargoes, such as grain or coal dust.
- 7.6.2.1.7 Packages and cargo transport units found to be damaged, leaking or sifting shall not be loaded on a general cargo ship. Care shall be taken to ensure that excessive water, snow, ice or foreign matter adhering to packages and cargo transport units shall be removed before loading.
- 7.6.2.1.8 Packages and cargo transport units and any other goods shall be adequately braced and secured for the voyage.\* Packages shall be loaded in such a way that there will be a minimum likelihood of damage to them and to any fittings during transport. Fittings on packages or portable tanks shall be adequately protected.

##### 7.6.2.2 Provisions for flammable gases and highly flammable liquids

- 7.6.2.2.1 In cargo ships of 500 gross tons or over and passenger ships constructed before 1 September 1984, and in cargo ships of less than 500 gross tons constructed before 1 February 1992, flammable gases or flammable liquids having a flashpoint of less than 23°C c.c., shall be stowed on deck only, unless otherwise approved by the Administration.
- 7.6.2.2.2 Flammable gases or liquids having a flashpoint less than 23°C c.c. transported on deck shall be stowed at least 3 m from any potential source of ignition.

\* Refer to regulation VII/5 of SOLAS, as amended.

**7.6.2.3 Ventilation provisions**

7.6.2.3.1 In cargo ships of 500 gross tons or over and passenger ships constructed before 1 September 1984, and in cargo ships of less than 500 gross tons constructed before 1 February 1992, the following dangerous goods, may be stowed *under deck* only if the cargo space is equipped with mechanical ventilation and if under deck stowage is permitted in the Dangerous Goods List:

- dangerous goods of class 2.1;
- dangerous goods of class 3 with a flashpoint of less than 23°C c.c.;
- dangerous goods of class 4.3;
- dangerous goods of class 6.1 with a subsidiary hazard of class 3;
- dangerous goods of class 8 with a subsidiary hazard of class 3, and
- dangerous goods to which a specific stowage requirement requiring mechanical ventilation in column 16a of the Dangerous Goods List is assigned.

Otherwise containers shall be stowed on deck only.

7.6.2.3.2 The capacity of the mechanical ventilation (number of air changes per hour) shall be to the satisfaction of the Administration.

**7.6.2.4 Provisions for class 1**

7.6.2.4.1 All compartments or holds and cargo transport units shall be locked or suitably secured in order to prevent unauthorized access. The means of locking and securing shall be such that, in the case of emergency, access can be gained without delay.

7.6.2.4.2 Loading and unloading procedures and equipment used should be of such a nature that sparks are not produced, in particular where the floors of the cargo compartment are not constructed of close-boarded wood. All cargo handlers should be briefed by the shipper or receiver of the potential risks and necessary precautions, prior to commencing the handling of explosives. In the event of the contents of packages being affected by water whilst on board, immediate advice shall be sought from the shipper; pending this advice, handling of the packages shall be avoided.

**7.6.2.4.3 Segregation on deck**

When goods in different compatibility groups are transported on deck, they shall be stowed not less than 6 m apart unless their mixed stowage is allowed according to 7.2.7.

**7.6.2.4.4 Segregation in single hold ships**

In a single hold ship, dangerous goods of class 1 shall be segregated in accordance with 7.2.7 except that:

- .1 Goods in Division 1.1 or 1.2 of compatibility group B may be stowed in the same hold as substances of compatibility group D provided:
  - the net explosives mass of goods of compatibility group B does not exceed 50 kg; and
  - such goods are stowed in a closed cargo transport unit which is stowed at least 6 m from the substances of compatibility group D.
- .2 Goods in Division 1.4 of compatibility group B may be stowed in the same hold as substances of compatibility group D provided they are separated either by a distance of at least 6 m or by a steel division.

7.6.2.4.5 In the event that a package containing goods of class 1 is found to be suffering from breakage or leakage expert advice should be obtained for its safe handling and disposal.

**7.6.2.5 Provisions for class 2**

7.6.2.5.1 When pressure receptacles are stowed in a vertical position they shall be stowed in a block, cribbed or boxed-in with suitable sound lumber and the box or crib dunnaged to provide clearance from a steel deck. Pressure receptacles in a box or crib shall be braced to prevent any movement. The box or crib (gas rack) shall be securely chocked and lashed to prevent movement in any direction.

7.6.2.5.2 Pressure receptacles stowed on deck shall be protected from sources of heat.

**7.6.2.6 Provisions for class 3**

7.6.2.6.1 Class 3 substances with a flashpoint of less than 23°C c.c. packaged in jerricans, plastics (3H1, 3H2), drums, plastics (1H1, 1H2), plastics receptacles in a plastic drum (6HH1, 6HH2) and Plastic Intermediate Bulk Containers (IBCs 31H1 and 31H2), shall be stowed *on deck only* unless packed in a closed cargo transport unit.

**7.6.2.7.3 Stowage provisions for SEED CAKE (UN 1386)**

**7.6.2.7.3.1** Stowage provisions for SEED CAKE, containing vegetable oil (a) mechanically expelled seeds, containing more than 10% oil or more than 20% oil and moisture combined:

- .1 through and surface ventilation is required;
- .2 if the voyage exceeds 5 days, the ship shall be equipped with facilities for introducing carbon dioxide or inert gas into the cargo spaces;
- .3 bags shall always be stowed in double strip, as shown in 7.6.2.7.2.3 of this Code for fish meal, unstabilized; and
- .4 regular temperature readings shall be taken at varying depths in the cargo space and recorded. If the temperature of the cargo exceeds 55°C and continues to increase, ventilation to the cargo spaces shall be restricted. If self-heating continues, then carbon dioxide or inert gas shall be introduced.

**7.6.2.7.3.2** Stowage provisions for SEED CAKE, containing vegetable oil (b) solvent extractions and expelled seeds containing not more than 10% of oil and, when the amount of moisture is higher than 10%, not more than 20% of oil and moisture combined:

- .1 surface ventilation is required to assist in removing any residual solvent vapour;
- .2 if bags are stowed without provision for ventilation to circulate throughout the stow and the voyage exceeds 5 days, regular temperature readings shall be taken at varying depths in the hold and recorded; and
- .3 if the voyage exceeds 5 days, the vessel shall be equipped with facilities for introducing carbon dioxide or inert gas into the cargo spaces.

**7.6.2.8 Provisions for class 5.1**

**7.6.2.8.1** Cargo spaces shall be cleaned before oxidizing substances are loaded into them. All combustible materials which are not necessary for the stowage of such cargoes shall be removed from the hold.

**7.6.2.8.2** As far as reasonably practicable, non-combustible securing and protecting materials and only a minimum of clean dry wooden dunnage shall be used.

**7.6.2.8.3** Precautions shall be taken to avoid the penetration of oxidizing substances into other cargo spaces, bilges, etc., which may contain combustible material.

△ **7.6.2.8.4** UN 1942 AMMONIUM NITRATE and UN 2067 AMMONIUM NITRATE BASED FERTILIZER may be stowed under deck in a clean cargo space capable of being opened up in an emergency. The possible need to open hatches in case of fire to provide maximum ventilation and to apply water in an emergency and the consequent risk to the stability of the ship through flooding of cargo space shall be considered before loading. The requirement for opening the cargo space hatches applies to the weather deck and tween deck hatches (if any).

**7.6.2.8.5** After discharge, cargo spaces used for the transport of oxidizing substances shall be inspected for contamination. A space that has been contaminated shall be properly cleaned and examined before being used for other cargoes.

**7.6.2.9 Provisions for self-reactive substances of class 4.1 and for class 5.2**

**7.6.2.9.1** Packages shall be stowed protected from sources of heat.

**7.6.2.9.2** When stowage arrangements are made, it shall be borne in mind that it may become appropriate to jettison a package or packages of this cargo.

**7.6.2.10 Provisions for classes 6.1 and 8**

**7.6.2.10.1** After discharge, spaces used for the transport of substances of this class shall be inspected for contamination. A space which has been contaminated shall be properly cleaned and examined before being used for other cargoes.

**7.6.2.10.2** Substances of class 8 shall be kept as dry as reasonably practicable, since in the presence of moisture they may be corrosive to most metals and some also react violently with water.

**Part 7 – Provisions concerning transport operations**

---

**7.6.2.11 Stowage of goods of class 9****7.6.2.11.1 Stowage provisions for AMMONIUM NITRATE BASED FERTILIZER, UN 2071**

7.6.2.11.1.1 AMMONIUM NITRATE BASED FERTILIZER, UN 2071 shall be stowed in a clean cargo space capable of being opened up in an emergency. In the case of bagged fertilizer or fertilizer in containers or in bulk containers, it is sufficient if, in the case of an emergency, the cargo is accessible through free approaches (hatch entries), and mechanical ventilation enables the master to exhaust any gases or fumes resulting from decomposition. The possible need to open hatches in case of fire to provide maximum ventilation and to apply water in an emergency, and the consequent risk to the stability of the ship through flooding of the cargo space, shall be considered before loading.

7.6.2.11.1.2 If suppression of decomposition should prove impracticable (such as in bad weather), there would not necessarily be immediate danger to the structure of the ship. However, the residue left after decomposition may have only half the mass of the original cargo; this loss of mass may also affect the stability of the ship and shall be considered before loading.

7.6.2.11.1.3 AMMONIUM NITRATE BASED FERTILIZER, UN 2071 shall be stowed out of direct contact with a metal engine-room bulkhead. In the case of bagged material, this may be done, for example, by using wooden boards to provide an air space between the bulkhead and the cargo. This requirement need not apply to short international voyages.

7.6.2.11.1.4 In the case of ships not fitted with smoke-detecting or other suitable devices, arrangements shall be made during the voyage to inspect cargo spaces containing these fertilizers at intervals not exceeding 4 h (such as to sniff at the ventilators serving them) to ensure early detection of decomposition should that occur.

**7.6.2.11.2 Stowage provisions for FISH MEAL, STABILIZED (UN 2216, class 9)**

7.6.2.11.2.1 For stowage provisions for FISH MEAL, STABILIZED (UN 2216, class 9), see 7.6.2.7.2.

**7.6.2.12 Stowage of dangerous goods in flexible bulk containers**

7.6.2.12.1 The stowage of dangerous goods in flexible bulk containers is not permitted on deck.

7.6.2.12.2 Flexible bulk containers shall be stowed in such a way that there are no void spaces between flexible bulk containers in the hold. If the flexible bulk containers do not completely fill the hold, adequate measures shall be taken to avoid shifting of cargo.

7.6.2.12.3 The maximum permissible stacking height of flexible bulk containers shall never exceed three high.

7.6.2.12.4 When flexible bulk containers are fitted with venting devices, the stowage of the flexible bulk containers shall not impede their function.

**7.6.3 Segregation provisions****7.6.3.1 Segregation from foodstuffs**

7.6.3.1.1 For the purpose of this subsection, the terms “away from”, “separated from” and “separated by a complete compartment or hold from” are defined in 7.6.3.2.

7.6.3.1.2 Dangerous goods having a primary or subsidiary hazard of classes 2.3, 6.1, 7 (with the exception of UN 2908, 2909, 2910 and 2911), 8 and dangerous goods for which it is referred to in segregation code SG29 or SG50 in column 16b of the Dangerous Goods List stowed in a conventional way shall be “separated from” foodstuffs stowed in a conventional way. If either dangerous goods or foodstuffs are in a closed cargo transport unit, dangerous goods shall be stowed “away from” foodstuffs. If both dangerous goods and foodstuffs are in different closed cargo transport units, no segregation requirements shall apply.

7.6.3.1.3 Dangerous goods of class 6.2 stowed in a conventional way shall be “separated by a complete compartment or hold from” foodstuffs stowed in a conventional way. If either dangerous goods or foodstuffs are in a closed cargo transport unit, dangerous goods shall be stowed “separated from” foodstuffs.

7.6.3.2 Segregation of packages containing dangerous goods and stowed in the conventional way

**Definitions of the segregation terms**

*Away from:*

Effectively segregated so that the incompatible goods cannot interact dangerously in the event of an accident but may be transported in the same compartment or hold or *on deck*, provided a minimum horizontal separation of 3 m, projected vertically, is obtained.

*Separated from:*

In different compartments or holds when stowed *under deck*. Provided the intervening deck is resistant to fire and liquid, a vertical separation, i.e. in different compartments, may be accepted as equivalent to this segregation. For *on deck* stowage, this segregation means a separation by a distance of **at least 6 m horizontally**.

*Separated by a complete compartment or hold from:*

Either a vertical or a horizontal separation. If the intervening decks are not resistant to fire and liquid, then only a longitudinal separation, i.e. by an intervening complete compartment or hold, is acceptable. For *on deck* stowage, this segregation means a separation by a distance of **at least 12 m horizontally**. The same distance has to be applied if one package is stowed on deck, and the other one in an upper compartment.

**Note:** One of the two decks must be resistant to fire and to liquid

*Separated longitudinally by an intervening complete compartment or hold from:*

Vertical separation alone does not meet this requirement. Between a package *under deck* and one on deck, a minimum distance of 24 m, including a complete compartment, must be maintained longitudinally. For *on deck* stowage, this segregation means a separation by a distance of **at least 24 m longitudinally**.

**Legend**

- Reference package . . . . .
- Package containing incompatible goods . . . . .
- Deck resistant to fire and liquid . . . . .

**Note:** Vertical lines represent transverse watertight bulkheads between cargo spaces.

Part 7 – Provisions concerning transport operations

- 7.6.3.3 Segregation of dangerous goods stowed in the conventional way from those transported in cargo transport units**
- 7.6.3.3.1** Dangerous goods stowed in the conventional way shall be segregated from goods transported in open cargo transport units in accordance with 7.6.3.2.
- 7.6.3.3.2** Dangerous goods stowed in the conventional way shall be segregated from goods transported in closed cargo transport units in accordance with 7.6.3.2 except that:
- .1 where “away from” is required, no segregation between the packages and the closed cargo transport units is required; and
  - .2 where “separated from” is required, the segregation between the packages and the closed cargo transport units may be as for “away from” as defined in 7.6.3.2.
- 7.6.3.4 Segregation of dangerous goods in cargo transport units stowed in conventional cargo spaces**
- 7.6.3.4.1** Dangerous goods in different closed cargo transport units (closed freight containers) stowed in holds and compartments not properly fitted to give a permanent stowage of the containers during transport shall be segregated from each other in accordance with 7.6.3.2 except that:
- .1 where “away from” is required, no segregation between the closed cargo transport units is required; and
  - .2 where “separated from” is required, the segregation between the closed cargo transport units may be as for “away from” as defined in 7.6.3.2.
- 7.6.3.5 Segregation between bulk materials possessing chemical hazards and dangerous goods in packaged form**
- 7.6.3.5.1** Unless otherwise required in this Code or in the IMSBC Code, segregation between bulk materials possessing chemical hazards and dangerous goods in packaged form shall be in accordance with the following table.
- 7.6.3.5.2 Segregation table**

| Bulk materials (classified as dangerous goods)                | Dangerous goods in packaged form |                   |            |     |     |            |   |     |     |     |     |     |     |     |   |   |   |
|---|----------------------------------|-------------------|------------|-----|-----|------------|---|-----|-----|-----|-----|-----|-----|-----|---|---|---|
|   | CLASS                            | 1.1<br>1.2<br>1.5 | 1.3<br>1.6 | 1.4 | 2.1 | 2.2<br>2.3 | 3 | 4.1 | 4.2 | 4.3 | 5.1 | 5.2 | 6.1 | 6.2 | 7 | 8 | 9 |

| Miscellaneous dangerous substances and articles               | 9                                | X                 | X          | X   | X   | X          | X | X   | X   | X   | X   | X   | X   | X   | X | X | X |
| Materials hazardous only in bulk (MHB)                        |                                  | X                 | X          | X   | X   | X          | X | X   | X   | X   | X   | X   | X   | 3   | X | X | X |

Numbers and symbols relate to the following terms, as defined in this chapter:

- 1 – “away from”
- 2 – “separated from”
- 3 – “separated by a complete compartment or hold from”
- 4 – “separated longitudinally by an intervening complete compartment or hold from”
- X – the segregation, if any, is shown in the Dangerous Goods List in this Code or the individual entries in the IMSBC Code

7.6.3.5.3 *Definitions of the segregation terms*

*Away from:*

Effectively segregated so that incompatible materials cannot interact dangerously in the event of an accident but may be transported in the same compartment or hold or *on deck* provided a minimum horizontal separation of 3 m, projected vertically, is provided.

*Separated from:*

In different holds when stowed *under deck*. Provided an intervening deck is resistant to fire and liquid, a vertical separation, i.e. in different compartments, may be accepted as equivalent to this segregation.

*Separated by a complete compartment or hold from:*

Either a vertical or a horizontal separation. If the decks are not resistant to fire and liquid, then only a longitudinal separation, i.e. by an intervening complete compartment, is acceptable.

*Separated longitudinally by an intervening complete compartment or hold from:*

Vertical separation alone does not meet this requirement.

**Legend**

- Reference bulk material .....
- Package containing incompatible goods .....
- Deck resistant to fire and liquid .....

**Note:** Vertical lines represent transverse watertight bulkheads between cargo spaces.

## Chapter 7.7

### *Shipborne barges on barge-carrying ships*

#### 7.7.1 Introduction

7.7.1.1 The provisions of this chapter are applicable to shipborne barges which contain packaged dangerous goods or solid bulk materials possessing chemical hazards while aboard barge-carrying ships.

7.7.1.2 Barges used for the shipborne transport of packaged dangerous goods or solid bulk materials possessing chemical hazards shall be of proper design and adequate strength to resist the stresses imposed by the conditions of the services in which they are employed and they shall be adequately maintained. Shipborne barges shall be approved in accordance with provisions for certification of a recognized classification society, or any organization approved by and acting on behalf of the competent authority of the countries concerned.

#### 7.7.2 Definitions

7.7.2.1 *Loading*, for the purpose of this chapter, means the placement of cargo into a shipborne barge.

7.7.2.2 *Stowage*, for the purposes of this chapter, means the placement of a shipborne barge aboard the barge-carrying ship.

#### 7.7.3 Barge loading

7.7.3.1 Packages shall be examined and any found to be damaged, leaking or sifting shall not be loaded into a shipborne barge. Care shall be taken to ensure that excessive water, snow, ice or foreign matter adhering to packages shall be removed before loading into a shipborne barge.

7.7.3.2 Packages containing dangerous goods, cargo transport units and any other goods within a shipborne barge shall be adequately braced and secured for the voyage. Packages shall be loaded in such a way that there will be a minimum likelihood of damage to them and to any fittings during transport. Fittings on packages or portable tanks shall be adequately protected.

7.7.3.3 Certain dry dangerous goods may be transported in bulk in shipborne barges; this is indicated by the Code "BK2" in column 13 of the Dangerous Goods List. Where such solid bulk materials possessing chemical hazards are transported in shipborne barges, it shall be ensured that at all times the cargo is evenly distributed, properly trimmed and secured.

7.7.3.4 Shipborne barges into which packaged dangerous goods or solid bulk materials possessing chemical hazards are to be loaded shall be examined visually for hull or hatch cover damage which could impair watertight integrity. If there is evidence of such damage, the shipborne barge may not be used for the transport of packaged dangerous goods or solid bulk materials possessing chemical hazards and shall not be loaded.

7.7.3.5 Dangerous goods which have to be segregated from each other according to the provisions in chapter 7.2 shall not be transported in the same barge with the exception of dangerous goods which shall be segregated "away from" each other which may be transported in the same barge with the approval of the competent authority. In such cases an equivalent standard of safety shall be maintained.

7.7.3.6 Dangerous goods having a primary or subsidiary hazard of classes 2.3, 6.1, 6.2, 7 (with the exception of UN 2908, 2909, 2910 and 2911), 8 and dangerous goods for which it is referred to in segregation code SG29 or SG50 in column 16b of the Dangerous Goods List shall not be transported together with foodstuffs (see 1.2.1) in the same barge.

7.7.3.7 Notwithstanding the provisions in 7.7.3.6, the following dangerous goods may be transported with foodstuffs in the same barge provided that they are not loaded within 3 m from foodstuffs:

- .1 dangerous goods of packing group III of classes 6.1 and 8;
- .2 dangerous goods of packing group II of class 8;
- .3 any other dangerous goods of packing group III with a subsidiary hazard of classes 6.1 or 8; and

.4 dangerous goods having a reference to 7.7.3.7 in column 16b of the Dangerous Goods List.

7.7.3.8 Shipborne barges containing a residue of a dangerous cargo or shipborne barges loaded with empty packagings still containing a residue of a dangerous substance shall comply with the same provisions as barges loaded with the substance itself.

#### 7.7.3.9 Stowage of dangerous goods in flexible bulk containers

7.7.3.9.1 Flexible bulk containers shall be stowed in the barge in such a way that there are no void spaces between the flexible bulk containers in the barge. If the flexible bulk containers do not completely fill the barge, adequate measures shall be taken to avoid shifting of cargo.

7.7.3.9.2 The maximum permissible height of the stack of the flexible bulk containers shall never exceed three high.

7.7.3.9.3 When flexible bulk containers are fitted with venting devices, the stowage of the flexible bulk containers in their barge shall not impede their function.

### 7.7.4 Stowage of shipborne barges

7.7.4.1 Stowage of shipborne barges carrying packaged dangerous goods or solid bulk materials possessing chemical hazards aboard barge-carrying ships shall be as required for the substance in chapter 7.1 and in column 16a of the Dangerous Goods List. When a shipborne barge is loaded with more than one substance, and the stowage locations differ for the substances (i.e. some substances require *on deck* stowage while other substances require *under deck* stowage), the shipborne barge containing these substances shall be stowed on deck.

7.7.4.2 Provision shall be made to ensure that shipborne barges stowed under deck and loaded with cargoes requiring ventilation because of their dangerous nature are ventilated to the extent necessary.

7.7.4.3 Where it is required that a dangerous good shall be protected from sources of heat, this provision shall be applied to the shipborne barge as a whole, unless suitable alternative measures are provided.

7.7.4.4 When packaged dangerous goods or solid bulk materials possessing chemical hazards are loaded in shipborne barges aboard barge-carrying ships having the capability of providing fixed fire-fighting systems or fire-detection systems to individual barges, care shall be taken to ensure that these systems are attached to the shipborne barge and operating properly.

7.7.4.5 When packaged dangerous goods or solid bulk materials possessing chemical hazards are loaded in shipborne barges aboard barge-carrying ships having fixed fire-fighting systems or fire-detection systems installed in individual barge holds, care shall be taken to ensure that the ventilation closures on the shipborne barges are open, to permit the fire fighting medium to enter the barges in case of fire.

7.7.4.6 When ventilation ducts are provided to individual shipborne barges, the ventilation fans shall be secured when fire-fighting medium is introduced into the hold to permit the medium to enter the shipborne barges.

### 7.7.5 Segregation between barges on board barge-carrying ships

7.7.5.1 For barge-carrying ships which incorporate other cargo spaces or any other method of stowage, the appropriate chapter shall apply to the relevant cargo space.

7.7.5.2 When a shipborne barge is loaded with two or more substances with different provisions for segregation, the most stringent segregation applicable shall be applied.

7.7.5.3 “Away from” and “separated from” require no segregation between shipborne barges.

7.7.5.4 “Separated by a complete compartment or hold from” means, for barge-carrying ships with vertical holds, that separate holds are required. On barge-carrying ships having horizontal barge levels, separate barge levels are required and the barges shall not be in the same vertical line.

7.7.5.5 “Separated longitudinally by an intervening complete compartment or hold from” means, for barge-carrying ships with vertical holds, that separation by an intervening hold or engine room is required. On barge-carrying ships having horizontal barge levels, separate barge levels and a longitudinal separation by at least two intervening barge spaces is required.

## Chapter 7.8

### *Special requirements in the event of an incident and fire precautions involving dangerous goods*

**Note:** The provisions of this chapter are not mandatory.

#### 7.8.1 General

7.8.1.1 In the event of an incident involving dangerous goods, detailed recommendations are contained in *The EmS Guide: Revised Emergency Response Procedures for Ships Carrying Dangerous Goods*.

7.8.1.2 In the event of personnel exposure during an incident involving dangerous goods, detailed recommendations are contained in *Medical First Aid Guide for Use in Accidents Involving Dangerous Goods (MFAG)*.

7.8.1.3 In the event that a package containing dangerous goods is found to be suffering from breakage or leakage while the ship is in port, the port authorities should be informed and appropriate procedures should be followed.

#### 7.8.2 General provisions in the event of incidents

7.8.2.1 Recommendations on emergency action may differ depending on whether or not the goods are stowed on deck or under deck or whether a substance is gaseous, liquid or solid. When dealing with incidents involving flammable gases, or flammable liquids with a flashpoint of 60°C closed-cup (c.c.) or below, all sources of ignition (such as naked lights, unprotected light bulbs, electric handtools) should be avoided.

7.8.2.2 In general, the recommendation is to wash spillages on deck overboard with copious quantities of water and, where there is likely to be a dangerous reaction with water, from as far away as practicable. Disposal of spilt dangerous goods overboard is a matter for judgement by the master, bearing in mind that the safety of the crew has priority over pollution of the sea. If it is safe to do so, spillages and leakages of substances, articles and materials identified in this Code as MARINE POLLUTANT should be collected for safe disposal. Inert absorbent material should be used for liquids.

7.8.2.3 Toxic, corrosive and/or flammable vapours in under deck cargo spaces should, where possible, be dispersed before undertaking any emergency action. Where a mechanical ventilation system is used, care will be necessary to ensure that flammable vapours are not ignited.

7.8.2.4 If there is any reason to suspect leakage of these substances, entry into a hold or cargo space should not be permitted until the master or responsible officer has taken all safety considerations into account and is satisfied that it is safe to do so.

7.8.2.5 Emergency entry into the hold under other circumstances should only be undertaken by trained crew wearing self-contained breathing apparatus and other protective clothing.

7.3.2.6 A careful inspection for structural damage should be carried out after dealing with spillages of substances corrosive to steel and cryogenic liquids.

#### 7.8.3 Special provisions for incidents involving infectious substances

7.8.3.1 If any person responsible for the transport or opening of packages containing infectious substances becomes aware of damage to or leakage from such packages, he should:

- .1 avoid handling the package or keep handling to a minimum;
- .2 inspect adjacent packages for contamination and put aside any that have been contaminated;
- .3 inform the appropriate public health authority or veterinary authority, and provide information on any other countries of transit where persons may have been exposed to danger; and
- .4 notify the consignor and/or the consignee.

### 7.8.3.2 Decontamination

A cargo transport unit, a bulk container or a cargo space of a ship, which has been used to transport infectious substances, shall be inspected for release of the substance before re-use. If infectious substances were released during transport, the cargo transport unit, the bulk container or the cargo space of a ship shall be decontaminated before it is re-used. Decontamination may be achieved by any means which effectively inactivates the infectious substance released.

## 7.8.4 Special provisions for incidents involving radioactive material

7.8.4.1 If it is evident that a package is damaged or leaking, or if it is suspected that the package may have leaked or been damaged, access to the package should be restricted and a qualified person should, as soon as possible, assess the extent of contamination and the resultant dose rate of the package. The scope of the assessment should include the package, the conveyance, the adjacent loading and unloading areas, and, if necessary, all other material which has been transported in the conveyance. When necessary, additional steps for the protection of people, property and the environment, in accordance with provisions established by the relevant competent authority, should be taken to overcome and minimize the consequences of such leakage or damage.

7.8.4.2 Packages damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport may be removed to an acceptable interim location under supervision, but should not be forwarded until repaired or reconditioned and decontaminated.

7.8.4.3 In the event of a nuclear or radiological emergency during the transport of radioactive material, provisions as established by relevant national and/or international organizations, should be observed to protect people, property and the environment. This includes arrangements for preparedness and response established in accordance with the national and/or international requirements and in a consistent and coordinated manner with the national and/or international emergency arrangements.

7.8.4.4 Attention is drawn to the latest versions of both *The EmS Guide: Revised Emergency Response Procedures for Ships Carrying Dangerous Goods* and the *Medical First Aid Guide for Use in Accidents Involving Dangerous Goods (MFAAG)*.

7.8.4.5 The arrangements for preparedness and response should be based on the graded approach and take into consideration the identified hazards and their potential consequences, including the formation of other dangerous substances that may result from the reaction between the contents of a consignment and the environment in the event of a nuclear or radiological emergency. Guidance for the establishment of such arrangements is contained in “Preparedness and Response for a Nuclear or Radiological Emergency”, IAEA Safety Standards Series No. GSR Part 7, IAEA, Vienna (2015); “Criteria for Use in Preparedness and Response for a Nuclear or Radiological Emergency”, IAEA Safety Standards Series No. GSG-2, IAEA, Vienna (2011); “Arrangements for Preparedness for a Nuclear or Radiological Emergency”, IAEA Safety Standards Series No. GS-G-2.1, IAEA, Vienna (2007), and “Arrangements for the Termination of a Nuclear or Radiological Emergency”, IAEA Safety Standards Series No. GSG-11, IAEA, Vienna (2018).

7.8.4.6 In the event of a package containing radioactive material suffering from breakage or leakage while the ship is in port, the port authorities should be informed and advice obtained from them or from the competent authority.\* Procedures have been drawn up in many countries for summoning radiological assistance in any such emergency.

## 7.8.5 General fire precautions

7.8.5.1 The prevention of fire in a cargo of dangerous goods is achieved by practising good seamanship, observing in particular the following precautions:

- .1 keep combustible material away from ignition sources;
- .2 protect a flammable substance by adequate packing;
- .3 reject damaged or leaking packages;
- .4 stow packages protected from accidental damage or heating;
- .5 segregate packages from substances liable to start or spread fire;
- .6 where appropriate and practicable, stow dangerous goods in an accessible position so that packages in the vicinity of a fire may be protected;

\* Reference is made to chapter 7.9 and the IAEA list of national competent authorities responsible for approvals and authorizations in respect of the transport of radioactive material. The list is updated annually.

**Part 7 – Provisions concerning transport operations**

---

- .7 enforce prohibition of smoking in dangerous areas and display clearly recognizable “NO SMOKING” notices or signs; and
- .8 the dangers from short-circuits, earth leakages or sparking will be apparent. Lighting and power cables and fittings should be maintained in good condition. Cables or equipment found to be unsafe should be disconnected. Where a bulkhead is required to be suitable for segregation purposes, cables and conduit penetrations of the decks and bulkheads should be sealed against the passage of gas and vapours.

When stowing dangerous goods on deck, the position and design of auxiliary machinery, electrical equipment and cable runs should be considered in order to avoid sources of ignition.

- 7.8.5.2 Fire precautions applying to individual classes, and where necessary to individual substances, are recommended in 7.8.2 and 7.8.6 to 7.8.9 and in the Dangerous Goods List.

**7.8.6 Special fire precautions for class 1**

- 7.8.6.1 The greatest risk in the handling and transport of goods of class 1 is that of fire from a source external to the goods, and it is vital that any fire should be detected and extinguished before it can reach such goods. Consequently, it is essential that fire precautions, fire-fighting measures and equipment are of a high standard and ready for immediate application and use.

- 7.8.6.2 Compartments containing goods of class 1 and adjacent cargo spaces should be provided with a fire-detection system. If such spaces are not protected by a fixed fire-extinguishing system, they should be accessible for fire-fighting operations.

- 7.8.6.3 No repair work should be carried out in a compartment containing goods of class 1. Special care should be exercised in carrying out repairs in any adjacent space. No welding, burning, cutting, or riveting operations involving the use of fire, flame, spark, or arc-producing equipment should be carried out in any space other than machinery spaces and workshops where fire-extinguishing arrangements are available, except in any emergency and, if in port, with prior authorization of the port authority.

**7.8.7 Special fire precautions for class 2**

- 7.8.7.1 Effective ventilation should be provided to remove any leakage of gas from within the cargo space or spaces, bearing in mind that some gases are heavier than air and may accumulate in dangerous concentrations in the lower part of the ship.

- 7.8.7.2 Measures should be taken to prevent leaking gases from penetrating into any other part of the ship.

- 7.8.7.3 If there is any reason to suspect leakage of a gas, entry into cargo spaces or other enclosed spaces should not be permitted until the master or responsible officer has taken all safety considerations into account and is satisfied that it is safe to do so. Emergency entry under other circumstances should only be undertaken by trained crew wearing self-contained breathing apparatus, and protective clothing when recommended, and always under the supervision of a responsible officer.

- 7.8.7.4 Leakage from pressure receptacles containing flammable gases may give rise to explosive mixtures with air. Such mixtures, if ignited, may result in explosion and fire.

**7.8.8 Special fire precautions for class 3**

- 7.8.8.1 Flammable liquids give off flammable vapours which, especially in an enclosed space, form explosive mixtures with air. Such vapours, if ignited, may cause a “flashback” to the place in which the substances are stowed. Due regard should be paid to the provision of adequate ventilation to prevent accumulation of vapours.

**7.8.9 Special fire precautions and fire fighting for class 7**

- 7.8.9.1 The radioactive contents of Excepted, Industrial, and Type A packages are so restricted that, in the event of an accident and damage to the package, there is a high probability that any material released, or shielding efficiency lost, would not give rise to such radiological hazard as to hamper fire-fighting or rescue operations.

- 7.8.9.2 Type B(U) packages, Type B(M) packages and Type C packages are designed to be strong enough to withstand severe fire without significant loss of contents or dangerous loss of radiation shielding.

## Chapter 7.9

### *Exemptions, approvals and certificates*

#### 7.9.1 Exemptions

**Note 1** The provisions of this section do not apply to exemptions mentioned in chapters 1 to 7.8 of this Code and to approvals (including permits, authorizations or agreements) and certificates which are referred to in chapters 1 to 7.8 of this Code. For the said approvals and certificates, see 7.9.2.

**Note 2** The provisions of this section do not apply to class 7. For consignments of radioactive material for which conformity with any provision of this Code applicable to class 7 is impracticable, refer to 1.5.4.

7.9.1.1 Where this Code requires that a particular provision for the transport of dangerous goods shall be complied with, a competent authority or competent authorities (port State of departure, port State of arrival or flag State) may authorize any other provision by exemption if satisfied that such provision is at least as effective and safe as that required by this Code. Acceptance of an exemption authorized under this section by a competent authority not party to it is subject to the discretion of that competent authority. Accordingly, prior to any shipment covered by the exemption, the recipient of the exemption shall notify other competent authorities concerned.

7.9.1.2 Competent authority or competent authorities which have taken the initiative with respect to the exemption:

- .1 shall send a copy of such exemption to the International Maritime Organization which shall bring it to the attention of the Contracting Parties to SOLAS and/or MARPOL, as appropriate, and
- .2 if appropriate, take action to amend the IMDG Code to include the provisions covered by the exemption.

7.9.1.3 The period of validity of the exemption shall be not more than five years from the date of authorization. An exemption that is not covered under 7.9.1.2.2 may be renewed in accordance with the provisions of this section.

7.9.1.4 A copy of the exemption shall accompany each consignment when offered to the carrier for transport under the terms of the exemption. A copy of the exemption or an electronic copy thereof shall be maintained on board each ship transporting dangerous goods in accordance with the exemption, as appropriate.

#### 7.9.2 Approvals (including permits, authorizations or agreements) and certificates

7.9.2.1 Approvals, including permits, authorizations or agreements, and certificates referred to in chapters 1 to 7.8 of this Code and issued by the competent authority (authorities when the Code requires a multilateral approval) or a body authorized by that competent authority (e.g. approvals for alternative packaging in 4.1.3.7, approval for segregation as in 7.3.4.1 or certificates for portable tanks in 6.7.2.18.1) shall be recognized, as appropriate:

- .1 by other contracting parties to SOLAS if they comply with the requirements of the *International Convention for the Safety of Life at Sea, 1974* (SOLAS), as amended; and/or
- .2 by other contracting parties to MARPOL if they comply with the requirements of the *International Convention for the Prevention of Pollution from Ships, 1973*, as modified by the Protocol of 1978 relating thereto (MARPOL, Annex III), as amended.

#### 7.9.3 Contact information for the main designated national competent authorities

Contact information for the main designated national competent authorities concerned is reproduced in this paragraph and obtained from the GISIS Module on Contact Points.\*

\* Member States are invited to access GISIS in order to update their corresponding main designated national competent authorities' contact information through their GISIS Account Managers. Public access to GISIS Module of Contact Points, in order to electronically obtain the most updated contact information, is provided through the following link: <https://gisis.imo.org/Public/>.

# **PART 3**

**DANGEROUS GOODS LIST,  
SPECIAL PROVISIONS AND EXCEPTIONS**

## Chapter 3.1

---

### General

#### 3.1.1 Scope and general provisions

- 3.1.1.1 The Dangerous Goods List in chapter 3.2 lists many of the dangerous goods most commonly transported. The list includes entries for specific chemical substances and articles and generic or “not otherwise specified” entries. Since it is not practical to include a separate entry for every chemical substance or article of commercial importance specifically by name, especially names for mixtures and solutions of various chemical constituents and concentrations, the Dangerous Goods List also includes generic or “not otherwise specified” names (e.g. EXTRACTS, LIQUID, for flavour or aroma, UN 1197 or FLAMMABLE LIQUID, N.O.S., UN 1993). On this basis, the Dangerous Goods List is intended to include an appropriate name or entry for any dangerous good which may be transported.
- 3.1.1.2 Where a dangerous good is specifically listed by name in the Dangerous Goods List, it shall be transported in accordance with the provisions in the List which are appropriate for that dangerous good. A generic or “not otherwise specified” entry may be used to permit the transport of substances, materials or articles which do not appear specifically by name in the Dangerous Goods List. Such a dangerous good may be transported only after its dangerous properties have been determined. Dangerous goods shall be classified according to the class definitions, tests and criteria. The name which most appropriately describes the dangerous goods shall be used. Only when the specific name of the dangerous goods does not appear in the Dangerous Goods List or the associated primary or subsidiary hazards assigned to it are not appropriate may a generic or “not otherwise specified” name be used. The classification shall be made by the shipper/consignor or by the appropriate competent authority where so specified in the Code. Once the class of the dangerous good has been so established, all conditions for transport, as provided in this Code, shall be met. Any dangerous good having or suspected of having explosive characteristics shall first be considered for inclusion in class 1. Some collective entries may be of the generic or “not otherwise specified” type provided that the Code contains provisions ensuring safety, both by excluding extremely dangerous goods from normal transport and by covering all subsidiary hazards inherent in some goods.
- 3.1.1.3 Inherent instability in goods may take different dangerous forms, for example explosion, polymerization with intense evolution of heat or emission of flammable, toxic, corrosive or asphyxiant gases. The Dangerous Goods List indicates that certain dangerous goods, or dangerous goods in a specific form, concentration or state, are prohibited for transport by sea. This means that the goods specified are not suitable for transport by sea under normal conditions of transport. This does not mean that such goods may not be transported under any circumstances. For most goods, such inherent instability can be controlled by suitable packaging, dilution, stabilization, addition of an inhibitor, temperature control or other measures.
- 3.1.1.4 Where precautionary measures are laid down in the Dangerous Goods List in respect of a given dangerous good (such as that it shall be “stabilized” or “with x% water or phlegmatizer”), such dangerous good may not normally be transported when these measures have not been taken, unless the item in question is listed elsewhere (such as class 1) without any indication of, or with different, precautionary measures.
- 3.1.1.5 Certain substances, by the nature of their chemical composition, tend to polymerize or otherwise react in a dangerous manner under certain conditions of temperature or in contact with a catalyst. Mitigation of this tendency can be carried out either by requiring special transport conditions or by adding adequate amounts of chemical inhibitors or stabilizers to the product. These products shall be sufficiently stabilized to prevent any dangerous reaction during the intended voyage. If this cannot be ensured, the transport of such products is prohibited.
- 3.1.1.6 Where the contents of a portable tank is to be transported heated, the transport temperature is to be maintained during the intended voyage unless it is established that crystallization or solidification on cooling would not result in instability, which can occur with some stabilized or inhibited products.

## Part 3 – Dangerous Goods List, special provisions and exceptions

3

## 3.1.2 Proper shipping names

**Note 1:** The proper shipping names of the dangerous goods are those listed in chapter 3.2, Dangerous Goods List. Synonyms, secondary names, initials, abbreviations of names, etc. have been included in the Index to facilitate the search for the proper shipping name (see part 5, Consignment procedures).

**Note 2:** For proper shipping names to be used for transport of samples, see 2.0.4. For proper shipping names to be used for transport of wastes, see 5.4.1.4.3.3.

3.1.2.1 The proper shipping name is that portion of the entry most accurately describing the goods in the Dangerous Goods List, which is shown in upper-case characters (plus any numbers, Greek letters, 'sec', 'tert', and the letters *m*, *n*, *o*, *p*, which form an integral part of the name). An alternative proper shipping name may be shown in brackets following the main proper shipping name (such as ETHANOL (ETHYL ALCOHOL)). Portions of an entry appearing in lower case need not be considered as part of the proper shipping name but may be used.

△ 3.1.2.2 When a combination of several distinct proper shipping names are listed under a single UN number, and these are separated by "or" in lower case or are punctuated by commas, only the most appropriate shall be shown in the transport document and package marks.

Examples illustrating the selection of the proper shipping name for such entries are:

.1 UN 1057 LIGHTERS or LIGHTER REFILLS – The proper shipping name is the most appropriate of the following possible combinations:

LIGHTERS  
LIGHTER REFILLS;

.2 UN 2583 ALKYL SULPHONIC ACIDS, SOLID or ARYL SULPHONIC ACIDS, SOLID with more than 5% free sulphuric acid – The proper shipping name is the most appropriate of the following:

ALKYL SULPHONIC ACIDS, SOLID  
ARYL SULPHONIC ACIDS, SOLID;

.3 UN 2793 FERROUS METAL BORINGS, SHAVINGS, TURNINGS or CUTTINGS in a form liable to self-heating. The proper shipping name is the most appropriate of the following combinations:

FERROUS METAL BORINGS  
FERROUS METAL SHAVINGS  
FERROUS METAL TURNINGS  
FERROUS METAL CUTTINGS.

3.1.2.3 Proper shipping names may be used in the singular or plural as appropriate. In addition, when qualifying words are used as part of the proper shipping name, their sequence on documentation or packages is optional. Commercial or military names for goods of class 1, which contain the proper shipping name supplemented by additional text, may be used.

3.1.2.4 Many substances have an entry for both the liquid and solid state (see definitions for *liquids* and *solids* in 1.2.1), or for the solid and solution. These are allocated separate UN numbers which are not necessarily adjacent to each other. Details are provided in the alphabetical index, e.g.:

NITROXYLENES, LIQUID – 6.1 1665  
NITROXYLENES, SOLID – 6.1 3447.

3.1.2.5 Where it is not already included, the qualifying word "MOLTEN" shall be added to the proper shipping name when a substance which is solid in accordance with the definition in 1.2.1 is offered for transport in the molten state (such as ALKYLPHENOL, SOLID, N.O.S., MOLTEN). For elevated temperature substances, see 5.4.1.4.3.4.

3.1.2.6 Except for self-reactive substances and organic peroxides and unless it is already included in capital letters in the name indicated in the Dangerous Goods List, the word STABILIZED shall be added as part of the proper shipping name of the substance which without stabilization would be forbidden from transport in accordance with 1.1.3 due to it being liable to dangerously react under conditions normally encountered in transport (such as TOXIC LIQUID, ORGANIC, N.O.S., STABILIZED). When temperature control is used to stabilize such substances to prevent the development of any dangerous excess pressure, or the evolution of excessive heat, or when chemical stabilization is used in combination with temperature control, then:

.1 For liquids and solids where the SAPT (measured without or with inhibitor, when chemical stabilization is applied) is less than or equal to that prescribed in 2.4.2.5.2, special provision 386 of chapter 3.3 and the provisions of 7.3.7 apply;

.2 Unless it is already included in capital letters in the name indicated in the Dangerous Goods List, the words "TEMPERATURE CONTROLLED" shall be added as part of the proper shipping name;

.3 For gases: the conditions of transport shall be approved by the competent authority.

3.1.2.7 Hydrates may be transported under the proper shipping name for the anhydrous substance.

### 3.1.2.8 Generic or “not otherwise specified” (N.O.S.) entries

3.1.2.8.1 Generic and “not otherwise specified” proper shipping names that are assigned to special provision 274 or 318 in column 6 of the Dangerous Goods List shall be supplemented with the technical or chemical group names unless a national law or international convention prohibits its disclosure if it is a controlled substance. For explosives of class 1, the dangerous goods description may be supplemented by additional descriptive text to indicate commercial or military names. Technical and chemical group names shall be entered in brackets immediately following the proper shipping name. An appropriate modifier, such as “contains” or “containing” or other qualifying words such as “mixture”, “solution”, etc., and the percentage of the technical constituent may also be used. For example: “UN 1993 Flammable liquid, n.o.s. (contains xylene and benzene), 3, PG II”.

3.1.2.8.1.1 The technical name shall be a recognized chemical or biological name or other name currently used in scientific and technical handbooks, journals and texts. Trade names shall not be used for this purpose. In the case of pesticides, only ISO common name(s), other name(s) in *The WHO Recommended Classification of Pesticides by Hazard and Guidelines to Classification*, or the name(s) of the active substance(s) may be used.

3.1.2.8.1.2 When a mixture of dangerous goods or articles containing dangerous goods are described by one of the “N.O.S.” or “generic” entries to which special provision 274 has been allocated in the Dangerous Goods List, not more than the two constituents which most predominantly contribute to the hazard or hazards of the mixture or of the articles need to be shown, excluding controlled substances when their disclosure is prohibited by national law or international convention. If a package containing a mixture is labelled with any subsidiary hazard label, one of the two technical names shown in brackets shall be the name of the constituent which compels the use of the subsidiary hazard label.

3.1.2.8.1.3 Examples illustrating the selection of the proper shipping name supplemented with the technical name of goods for such N.O.S. entries are:

UN 2902 PESTICIDE, LIQUID, TOXIC, N.O.S. (drazoxolon)

UN 3394 ORGANOMETALLIC SUBSTANCE, LIQUID, PYROPHORIC, WATER-REACTIVE  
(trimethylgallium).

UN 3540 ARTICLES CONTAINING FLAMMABLE LIQUID, N.O.S. (pyrrolidine)

### 3.1.2.9 Marine pollutants

3.1.2.9.1 For the purpose of documentation, the proper shipping name of “not otherwise specified” (N.O.S.) entries which are classified as marine pollutants in accordance with 2.10.3, shall be supplemented with the recognized chemical name of the constituent which most predominantly contributes to the classification as marine pollutant unless otherwise provided by SP274.

3.1.2.9.2 An example illustrating the selection of the proper shipping name supplemented with the recognized technical name of goods for such entries are is indicated below:

UN 1993 FLAMMABLE LIQUID, N.O.S. (propyl acetate, di-*n*-butyltin di-2-ethylhexanoate) class 3 PG III  
(50°C c.c.) MARINE POLLUTANT

### 3.1.3 Mixtures or solutions

**Note:** Where a substance is specifically listed by name in the Dangerous Goods List, it shall be identified in transport by the proper shipping name in the Dangerous Goods List. Such substances may contain technical impurities (for example those deriving from the production process) or additives for stability or other purposes that do not affect their classification. However, a substance listed by name containing technical impurities or additives for stability or other purposes affecting its classification shall be considered a mixture or solution (see 2.0.2.2 and 2.0.2.5).

3.1.3.1 A mixture or solution is not subject to the provisions of this Code if the characteristics, properties, form or physical state of the mixture or solution are such that it does not meet the criteria, including human experience criteria, for inclusion in any class.

3.1.3.2 A mixture or solution meeting the classification criteria of this Code composed of a single predominant substance identified by name in the Dangerous Goods List and one or more substances not subject to the provisions of this Code and/or traces of one or more substances identified by name in the Dangerous Goods List, shall be assigned the UN number and proper shipping name of the predominant substance named in the Dangerous Goods List unless:

- .1 the mixture or solution is identified by name in the Dangerous Goods List;
- .2 the name and description of the substance named in the Dangerous Goods List specifically indicate that they apply only to the pure substance;
- .3 the hazard class or division, subsidiary hazard(s), packing group, or physical state of the mixture or solution is different from that of the substance named in the Dangerous Goods List; or

**Part 3 – Dangerous Goods List, special provisions and exceptions**

- 3
- .4 the hazard characteristics and properties of the mixture or solution necessitate emergency response measures that are different from those required for the substance identified by name in the Dangerous Goods List.
- 3.1.3.3 Qualifying words such as “MIXTURE” or “SOLUTION”, as appropriate, shall be added as part of the proper shipping name, for example, “ACETONE SOLUTION”. In addition, the concentration of the mixture or solution may also be indicated after the basic description of the mixture or solution, for example, “ACETONE 75% SOLUTION”.
- 3.1.3.4 A mixture or solution meeting the classification criteria of this Code that is not identified by name in the Dangerous Goods List and that is composed of two or more dangerous goods shall be assigned to an entry that has the proper shipping name, description, hazard class or division, subsidiary hazard(s) and packing group that most precisely describe the mixture or solution.

**3.1.4 Segregation groups**

- 3.1.4.1 For the purpose of segregation, dangerous goods having certain similar chemical properties have been grouped together in segregation groups, see 7.2.5.
- 3.1.4.2 It is recognized that not all substances, mixtures, solutions or preparations falling within a segregation group are listed in the IMDG Code by name. These are shipped under N.O.S. entries. Although these N.O.S. entries are not themselves listed in the segregation groups (see 3.1.4.4), the consignor shall decide whether inclusion under the segregation group is appropriate and, if so, shall mention that fact in the transport document (see 5.4.1.5.11).
- 3.1.4.3 The segregation groups in this Code do not cover substances which fall outside the classification criteria of the Code. It is recognized that some non-hazardous substances have similar chemical properties as substances listed in the segregation groups. A consignor or the person responsible for packing the goods into a cargo transport unit who does have knowledge of the chemical properties of such non-dangerous goods may decide to implement the segregation provisions of a related segregation group on a voluntary basis.
- 3.1.4.4 The following segregation groups are identified.

**1 Acids (SGG1)**

|      |                                    |
|------|------------------------------------|
| 1052 | Hydrogen fluoride, anhydrous       |
| 1182 | Ethyl chloroformate                |
| 1183 | Ethylchlorosilane                  |
| 1238 | Methyl chloroformate               |
| 1242 | Methylchlorosilane                 |
| 1250 | Methyltrichlorosilane              |
| 1295 | Trichlorosilane                    |
| 1298 | Trimethylchlorosilane              |
| 1305 | Vinyltrichlorosilane               |
| 1572 | Cacodylic acid                     |
| 1595 | Dimethyl sulphate                  |
| 1715 | Acetic anhydride                   |
| 1716 | Acetyl bromide                     |
| 1717 | Acetyl chloride                    |
| 1718 | Butyl acid phosphate               |
| 1722 | Allyl chloroformate                |
| 1723 | Allyl iodide                       |
| 1724 | Allyltrichlorosilane, stabilized   |
| 1725 | Aluminium bromide, anhydrous       |
| 1726 | Aluminium chloride, anhydrous      |
| 1727 | Ammonium hydrogendifluoride, solid |
| 1728 | Amyltrichlorosilane                |
| 1729 | Anisoyl chloride                   |
| 1730 | Antimony pentachloride, liquid     |
| 1731 | Antimony pentachloride solution    |

|      |   |
|------|---|
| 1732 | Antimony pentafluoride                                  |
| 1733 | Antimony trichloride                                    |
| 1736 | Benzoyl chloride  |
| 1737 | Benzyl bromide  |
| 1738 | Benzyl chloride   |
| 1739 | Benzyl chloroformate                                    |
| 1740 | Hydrogendifluorides, n.o.s.                             |
| 1742 | Boron trifluoride acetic acid complex, liquid           |
| 1743 | Boron trifluoride propionic acid complex, liquid        |
| 1744 | Bromine or bromine solution                             |
| 1745 | Bromine pentafluoride                                   |
| 1746 | Bromine trifluoride                                     |
| 1747 | Butyltrichlorosilane                                    |
| 1750 | Chloroacetic acid solution                              |
| 1751 | Chloroacetic acid, solid                                |
| 1752 | Chloroacetyl chloride                                   |
| 1753 | Chlorophenyltrichlorosilane                             |
| 1754 | Chlorosulphonic acid (with or without sulphur trioxide) |
| 1755 | Chromic acid solution                                   |
| 1756 | Chromic fluoride, solid                                 |
| 1757 | Chromic fluoride solution                               |
| 1758 | Chromium oxychloride                                    |
| 1762 | Cyclohexenyltrichlorosilane                             |
| 1763 | Cyclohexyltrichlorosilane                               |
| 1764 | Dichloroacetic acid                                     |
| 1765 | Dichloroacetyl chloride                                 |
| 1766 | Dichlorophenyltrichlorosilane                           |
| 1767 | Diethyldichlorosilane                                   |
| 1768 | Difluorophosphoric acid, anhydrous                      |
| 1769 | Diphenyldichlorosilane                                  |
| 1770 | Diphenylmethyl bromide                                  |
| 1771 | Dodecyltrichlorosilane                                  |
| 1773 | Ferric chloride, anhydrous                              |
| 1775 | Fluoroboric acid  |
| 1776 | Fluorophosphoric acid, anhydrous                        |
| 1777 | Fluorosulphonic acid                                    |
| 1778 | Fluorosilicic acid                                      |
| 1779 | Formic acid with more than 85% acid by mass             |
| 1780 | Fumaryl chloride  |
| 1781 | Hexadecyltrichlorosilane                                |
| 1782 | Hexafluorophosphoric acid                               |
| 1784 | Hexyltrichlorosilane                                    |
| 1786 | Hydrofluoric acid and sulphuric acid mixture            |
| 1787 | Hydriodic acid  |
| 1788 | Hydrobromic acid  |
| 1789 | Hydrochloric acid                                       |
| 1790 | Hydrofluoric acid                                       |
| 1792 | Iodine monochloride, solid                              |
| 1793 | Isopropyl acid phosphate                                |
| 1794 | Lead sulphate with more than 3% free acid               |

**Part 3 – Dangerous Goods List, special provisions and exceptions**

|      |  |
|------|--|
| 1796 | Nitrating acid mixture   |
| 1798 | Nitrohydrochloric acid   |
| 1799 | Nonyltrichlorosilane   |
| 1800 | Octadecyltrichlorosilane   |
| 1801 | Octyltrichlorosilane   |
| 1802 | Perchloric acid with not more than 50% acid, by mass                   |
| 1803 | Phenolsulphonic acid, liquid   |
| 1804 | Phenyltrichlorosilane  |
| 1805 | Phosphoric acid, solution  |
| 1806 | Phosphorus pentachloride   |
| 1807 | Phosphorus pentoxide   |
| 1808 | Phosphorus tribromide  |
| 1809 | Phosphorus trichloride   |
| 1810 | Phosphorus oxychloride   |
| 1811 | Potassium hydrogendifluoride, solid                                    |
| 1815 | Propionyl chloride   |
| 1816 | Propyltrichlorosilane  |
| 1817 | Pyrosulphuryl chloride   |
| 1818 | Silicon tetrachloride  |
| 1826 | Nitrating acid mixture, spent  |
| 1827 | Stannic chloride, anhydrous  |
| 1828 | Sulphur chlorides  |
| 1829 | Sulphur trioxide, inhibited or sulphur trioxide, stabilized            |
| 1830 | Sulphuric acid with more than 51% acid                                 |
| 1831 | Sulphuric acid, fuming   |
| 1832 | Sulphuric acid, spent  |
| 1833 | Sulphurous acid  |
| 1834 | Sulphuryl chloride   |
| 1836 | Thionyl chloride   |
| 1837 | Thiophosphoryl chloride  |
| 1838 | Titanium tetrachloride   |
| 1839 | Trichloroacetic acid   |
| 1840 | Zinc chloride solution   |
| 1848 | Propionic acid with not less than 10% and less than 90% acid, by mass  |
| 1873 | Perchloric acid with more than 50% but not more than 72% acid, by mass |
| 1898 | Acetyl iodide  |
| 1902 | Diisooctyl acid phosphate  |
| 1905 | Selenic acid   |
| 1906 | Sludge acid  |
| 1938 | Bromoacetic acid solution  |
| 1939 | Phosphorus oxybromide  |
| 1940 | Thioglycolic acid  |
| 2031 | Nitric acid, other than red fuming                                     |
| 2032 | Nitric acid, red fuming  |
| 2214 | Phthalic anhydride with more than 0.05% of maleic anhydride            |
| 2215 | Maleic anhydride   |
| 2218 | Acrylic acid, inhibited  |
| 2225 | Benzenesulphonyl chloride  |
| 2226 | Benzotrichloride   |
| 2240 | Chromosulphuric acid   |

|      |   |
|------|---|
| 2262 | Dimethylcarbamoyl chloride  |
| 2267 | Dimethyl thiophosphoryl chloride  |
| 2305 | Nitrobenzenesulphonic acid  |
| 2308 | Nitrosylsulphuric acid, liquid  |
| 2331 | Zinc chloride, anhydrous  |
| 2353 | Butyryl chloride  |
| 2395 | Isobutyryl chloride   |
| 2407 | Isopropyl chloroformate   |
| 2434 | Dibenzylchlorosilane  |
| 2435 | Ethylphenyldichlorosilane   |
| 2437 | Methylphenyldichlorosilane  |
| 2438 | Trimethylacetyl chloride  |
| 2439 | Sodium hydrogendifluoride   |
| 2440 | Stannic chloride pentahydrate   |
| 2442 | Trichloroacetyl chloride  |
| 2443 | Vanadium oxytrichloride   |
| 2444 | Vanadium tetrachloride  |
| 2475 | Vanadium trichloride  |
| 2495 | Iodine pentafluoride  |
| 2496 | Propionic anhydride   |
| 2502 | Valeryl chloride  |
| 2503 | Zirconium tetrachloride   |
| 2506 | Ammonium hydrogen sulphate  |
| 2507 | Chloroplatinic acid, solid  |
| 2508 | Molybdenum pentachloride  |
| 2509 | Potassium hydrogen sulphate   |
| 2511 | 2-Chloropropionic acid  |
| 2513 | Bromoacetyl bromide   |
| 2531 | Methacrylic acid, stabilized  |
| 2564 | Trichloroacetic acid solution   |
| 2571 | Alkylsulphuric acids  |
| 2576 | Phosphorus oxybromide, molten   |
| 2577 | Phenylacetyl chloride   |
| 2578 | Phosphorus trioxide   |
| 2580 | Aluminium bromide solution  |
| 2581 | Aluminium chloride solution   |
| 2582 | Ferric chloride solution  |
| 2583 | Alkylsulphonic acids, solid or arylsulphonic acids, solid with more than 5% free sulphuric acid       |
| 2584 | Alkylsulphonic acids, liquid or arylsulphonic acids, liquid with more than 5% free sulphuric acid     |
| 2585 | Alkylsulphonic acids, solid or arylsulphonic acids, solid with not more than 5% free sulphuric acid   |
| 2586 | Alkylsulphonic acids, liquid or arylsulphonic acids, liquid with not more than 5% free sulphuric acid |
| 2604 | Boron trifluoride diethyl etherate  |
| 2626 | Chloric acid, aqueous solution with not more than 10% chloric acid                                    |
| 2642 | Fluoroacetic acid   |
| 2670 | Cyanuric chloride   |
| 2691 | Phosphorus pentabromide   |
| 2692 | Boron tribromide  |
| 2698 | Tetrahydrophthalic anhydrides with more than 0.05% maleic anhydride                                   |
| 2699 | Trifluoroacetic acid  |

## Part 3 – Dangerous Goods List, special provisions and exceptions

|      |   |
|------|---|
| 2739 | Butyric anhydride   |
| 2740 | Propyl chloroformate  |
| 2742 | Chloroformates, toxic, corrosive, flammable, n.o.s.                       |
| 2743 | <i>n</i> -Butyl chloroformate   |
| 2744 | Cyclobutyl chloroformate  |
| 2745 | Chloromethyl chloroformate  |
| 2746 | Phenyl chloroformate  |
| 2748 | 2-Ethylhexyl chloroformate  |
| 2751 | Diethylthiophosphoryl chloride  |
| 2789 | Acetic acid, glacial or acetic acid solution, more than 80% acid, by mass |
| 2790 | Acetic acid solution, more than 10% but not more than 80% acid, by mass   |
| 2794 | Batteries, wet, filled with acid electric storage                         |
| 2796 | Sulphuric acid with not more than 51% acid or battery fluid, acid         |
| 2798 | Phenylphosphorus dichloride   |
| 2799 | Phenylphosphorus thiodichloride   |
| 2802 | Copper chloride   |
| 2817 | Ammonium hydrogendifluoride solution                                      |
| 2819 | Amyl acid phosphate   |
| 2820 | Butyric acid  |
| 2823 | Crotonic acid, solid  |
| 2826 | Ethyl chlorothioformate   |
| 2829 | Caproic acid  |
| 2834 | Phosphorous acid  |
| 2851 | Boron trifluoride dihydrate   |
| 2865 | Hydroxylamine sulphate  |
| 2869 | Titanium trichloride mixture  |
| 2879 | Selenium oxychloride  |
| 2967 | Sulphamic acid  |
| 2985 | Chlorosilanes, flammable, corrosive, n.o.s.                               |
| 2986 | Chlorosilanes, corrosive, flammable, n.o.s.                               |
| 2987 | Chlorosilanes, corrosive, n.o.s.  |
| 2988 | Chlorosilanes, water-reactive, flammable, corrosive, n.o.s.               |
| 3246 | Methanesulphonyl chloride   |
| 3250 | Chloroacetic acid, molten   |
| 3260 | Corrosive solid, acidic, inorganic, n.o.s.                                |
| 3261 | Corrosive solid, acidic, organic, n.o.s.                                  |
| 3264 | Corrosive liquid, acidic, inorganic, n.o.s.                               |
| 3265 | Corrosive liquid, acidic, organic, n.o.s.                                 |
| 3277 | Chloroformates, toxic, corrosive, n.o.s.                                  |
| 3361 | Chlorosilanes, toxic, corrosive, n.o.s.                                   |
| 3362 | Chlorosilanes, toxic, corrosive, flammable, n.o.s.                        |
| 3412 | Formic acid with not less than 10% but not more than 85% acid by mass     |
| 3412 | Formic acid with not less than 5% but not more than 10% acid by mass      |
| 3419 | Boron trifluoride acetic acid complex, solid                              |
| 3420 | Boron trifluoride propionic acid complex, solid                           |
| 3421 | Potassium hydrogendifluoride solution                                     |
| 3425 | Bromoacetic acid, solid   |
| 3453 | Phosphoric acid, solid  |
| 3456 | Nitrosylsulphuric acid, solid   |
| 3463 | Propionic acid with not less than 90% acid by mass                        |

- 3472 Crotonic acid, liquid  
3498 Iodine monochloride, liquid
- 2 Ammonium compounds (SGG2)**
- 0004 Ammonium picrate dry or wetted with less than 10% water, by mass  
0222 Ammonium nitrate, with more than 0.2% combustible substances  
0402 Ammonium perchlorate  
1310 Ammonium picrate, wetted with not less than 10% water, by mass  
1439 Ammonium dichromate  
1442 Ammonium perchlorate  
1444 Ammonium persulphate  
1546 Ammonium arsenate  
1630 Mercury ammonium chloride  
1727 Ammonium hydrogendifluoride, solid
- 1835 Tetramethylammonium hydroxide aqueous solution with more than 2.5% but less than 25% tetramethylammonium hydroxide
- △ 1835 Tetramethylammonium hydroxide aqueous solution with not more than 2.5% tetramethylammonium hydroxide
- 1843 Ammonium dinitro-*o*-cresolate, solid  
1942 Ammonium nitrate with not more than 0.2% combustible substances  
2067 Ammonium nitrate based fertilizer  
2071 Ammonium nitrate based fertilizer  
2073 Ammonia solution, relative density less than 0.880 at 15°C in water, with more than 35% but not more than 50% ammonia  
2426 Ammonium nitrate, liquid (hot concentrated solution)  
2505 Ammonium fluoride  
2506 Ammonium hydrogen sulphate  
2683 Ammonium sulphide solution  
2687 Dicyclohexylammonium nitrite  
2817 Ammonium hydrogendifluoride solution  
2818 Ammonium polysulphide solution  
2854 Ammonium fluorosilicate  
2859 Ammonium metavanadate  
2861 Ammonium polyvanadate  
2863 Sodium ammonium vanadate  
3375 Ammonium nitrate emulsion or suspension or gel, intermediate for blasting explosives  
3423 Tetramethylammonium hydroxide, solid  
3424 Ammonium dinitro-*o*-cresolate solution
- 3560 Tetramethylammonium hydroxide aqueous solution with not less than 25% tetramethylammonium hydroxide
- 3 Bromates (SGG3)**
- 1450 Bromates, inorganic, n.o.s.  
1473 Magnesium bromate  
1484 Potassium bromate  
1494 Sodium bromate  
2469 Zinc bromate  
2719 Barium bromate  
3213 Bromates, inorganic, aqueous solution, n.o.s.
- 4 Chlorates (SGG4)**
- 1445 Barium chlorate, solid  
1452 Calcium chlorate

**Part 3 – Dangerous Goods List, special provisions and exceptions**

- 3**
- 1458 Chlorate and borate mixture
  - 1459 Chlorate and magnesium chloride mixture, solid
  - 1461 Chlorates, inorganic, n.o.s.
  - 1485 Potassium chlorate
  - 1495 Sodium chlorate
  - 1506 Strontium chlorate
  - 1513 Zinc chlorate
  - 2427 Potassium chlorate, aqueous solution
  - 2428 Sodium chlorate, aqueous solution
  - 2429 Calcium chlorate, aqueous solution
  - 2573 Thallium chlorate
  - 2721 Copper chlorate
  - 2723 Magnesium chlorate
  - 3405 Barium chlorate solution
  - 3407 Chlorate and magnesium chloride mixture solution
- 5 Chlorites (SGG5)**
- 1453 Calcium chlorite
  - 1462 Chlorites, inorganic, n.o.s.
  - 1496 Sodium chlorite
  - 1908 Chlorite solution
- 6 Cyanides (SGG6)**
- 1541 Acetone cyanhydrin, stabilized
  - 1565 Barium cyanide
  - 1575 Calcium cyanide
  - 1587 Copper cyanide
  - 1588 Cyanides, inorganic, solid, n.o.s.
  - 1620 Lead cyanide
  - 1626 Mercuric potassium cyanide
  - 1636 Mercury cyanide
  - 1642 Mercury oxycyanide, desensitized
  - 1653 Nickel cyanide
  - 1679 Potassium cuprocyanide
  - 1680 Potassium cyanide, solid
  - 1684 Silver cyanide
  - 1689 Sodium cyanide, solid
  - 1694 Bromobenzyl cyanides, liquid
  - 1713 Zinc cyanide
  - 1889 Cyanogen bromide
  - 1935 Cyanide solution, n.o.s.
  - 2205 Adiponitrile
  - 2316 Sodium cuprocyanide, solid
  - 2317 Sodium cuprocyanide solution
  - 3413 Potassium cyanide solution
  - 3414 Sodium cyanide solution
  - 3449 Bromobenzyl cyanides, solid
- 7 Heavy metals and their salts (including their organometallic compounds) (SGG7)**
- 0129 Lead azide, wetted, with not less than 20% water, or mixture of alcohol and water, by mass
  - 0130 Lead styphnate (lead trinitroresorcinate), wetted with not less than 20% water, or mixture of alcohol and water, by mass

|      |  |
|------|--|
| 0135 | Mercury fulminate, wetted with not less than 20% water, or mixture of alcohol and water, by mass |
| 1347 | Silver picrate, wetted with not less than 30% water, by mass                                     |
| 1389 | Alkali metal amalgam, liquid   |
| 1392 | Alkaline earth metal amalgam, liquid   |
| 1435 | Zinc ashes   |
| 1436 | Zinc dust or zinc powder   |
| 1469 | Lead nitrate   |
| 1470 | Lead perchlorate, solid  |
| 1493 | Silver nitrate   |
| 1513 | Zinc chlorate  |
| 1514 | Zinc nitrate   |
| 1515 | Zinc permanganate  |
| 1516 | Zinc peroxide  |
| 1587 | Copper cyanide   |
| 1616 | Lead acetate   |
| 1617 | Lead arsenates   |
| 1618 | Lead arsenites   |
| 1620 | Lead cyanide   |
| 1623 | Mercuric arsenate  |
| 1624 | Mercuric chloride  |
| 1625 | Mercuric nitrate   |
| 1626 | Mercuric potassium cyanide   |
| 1627 | Mercurous nitrate  |
| 1629 | Mercury acetate  |
| 1630 | Mercury ammonium chloride  |
| 1631 | Mercury benzoate   |
| 1634 | Mercury bromides   |
| 1636 | Mercury cyanide  |
| 1637 | Mercury gluconate  |
| 1638 | Mercury iodide   |
| 1639 | Mercury nucleate   |
| 1640 | Mercury oleate   |
| 1641 | Mercury oxide  |
| 1642 | Mercury oxycyanide, desensitized   |
| 1643 | Mercury potassium iodide   |
| 1644 | Mercury salicylate   |
| 1645 | Mercury sulphate   |
| 1646 | Mercury thiocyanate  |
| 1649 | Motor fuel anti-knock mixture  |
| 1653 | Nickel cyanide   |
| 1674 | Phenylmercuric acetate   |
| 1683 | Silver arsenite  |
| 1684 | Silver cyanide   |
| 1712 | Zinc arsenate and zinc arsenite mixture  |
| 1713 | Zinc cyanide   |
| 1714 | Zinc phosphide   |
| 1794 | Lead sulphate with more than 3% free acid  |
| 1838 | Titanium tetrachloride   |
| 1840 | Zinc chloride solution   |
| 1872 | Lead dioxide   |

## Part 3 – Dangerous Goods List, special provisions and exceptions

|      |  |
|------|--|
| 1894 | Phenylmercuric hydroxide   |
| 1895 | Phenylmercuric nitrate   |
| 1931 | Zinc dithionite  |
| 1931 | Zinc hydrosulphite   |
| 2024 | Mercury compound, liquid, n.o.s.   |
| 2025 | Mercury compound, solid, n.o.s.  |
| 2026 | Phenylmercuric compound, n.o.s.  |
| 2291 | Lead compound, soluble, n.o.s.   |
| 2331 | Zinc chloride, anhydrous   |
| 2441 | Titanium trichloride, pyrophoric or titanium trichloride mixture, pyrophoric |
| 2469 | Zinc bromate   |
| 2546 | Titanium powder, dry   |
| 2714 | Zinc resinate  |
| 2777 | Mercury based pesticide, solid, toxic  |
| 2778 | Mercury based pesticide, liquid, flammable, toxic                            |
| 2809 | Mercury  |
| 2855 | Zinc fluorosilicate  |
| 2869 | Titanium trichloride mixture   |
| 2878 | Titanium, sponge granules or titanium, sponge powders                        |
| 2881 | Metal catalyst, dry  |
| 2989 | Lead phosphite, dibasic  |
| 3011 | Mercury based pesticide, liquid, toxic, flammable                            |
| 3012 | Mercury based pesticide, liquid, toxic                                       |
| 3089 | Metal powder, flammable, n.o.s.  |
| 3174 | Titanium disulphide  |
| 3181 | Metal salts of organic compounds, flammable, n.o.s.                          |
| 3189 | Metal powder, self-heating, n.o.s.   |
| 3401 | Alkali metal amalgam, solid  |
| 3402 | Alkaline earth metal amalgam, solid  |
| 3408 | Lead perchlorate solution  |
| 3483 | Motor fuel anti-knock mixture, flammable                                     |

**8 Hypochlorites (SGG8)**

|      |   |
|------|---|
| 1471 | Lithium hypochlorite  |
| 1748 | Calcium hypochlorite, dry or calcium hypochlorite mixture, dry with more than 39% available chlorine (8.8% available oxygen)                        |
| 1791 | Hypochlorite solution   |
| 2208 | Calcium hypochlorite mixture, dry with more than 10% but not more than 39% available chlorine   |
| 2741 | Barium hypochlorite with more than 22% available chlorine   |
| 2880 | Calcium hypochlorite, hydrated or calcium hypochlorite, hydrated mixture with not less than 5.5% but not more than 16% water                        |
| 3212 | Hypochlorites, inorganic, n.o.s.  |
| 3255 | <i>tert</i> -Butyl hypochlorite   |
| 3485 | Calcium hypochlorite, dry, corrosive or calcium hypochlorite mixture, dry, corrosive with more than 39% available chlorine (8.8% available oxygen)  |
| 3486 | Calcium hypochlorite mixture, dry, corrosive with more than 10% but not more than 39% available chlorine  |
| 3487 | Calcium hypochlorite, hydrated, corrosive or calcium hypochlorite, hydrated mixture, corrosive, with not less than 5.5% but not more than 16% water |

**9 Lead and its compounds (SGG9)**

|      |   |
|------|---|
| 0129 | Lead azide, wetted with not less than 20% water, or mixture of alcohol and water, by mass |
|------|---|

- 0130 Lead styphnate, wetted with not less than 20% water, or mixture of alcohol and water, by mass
- 0130 Lead trinitroresorcinate, wetted with not less than 20% water, or mixture of alcohol and water, by mass
- 1469 Lead nitrate
- 1470 Lead perchlorate, solid
- 1616 Lead acetate
- 1617 Lead arsenates
- 1618 Lead arsenites
- 1620 Lead cyanide
- 1649 Motor fuel anti-knock mixture
- 1794 Lead sulphate with more than 3% free acid
- 1872 Lead dioxide
- 2291 Lead compound, soluble, n.o.s.
- 2989 Lead phosphide, dibasic
- 3408 Lead perchlorate solution
- 3483 Motor fuel anti-knock mixture, flammable
- 10 Liquid halogenated hydrocarbons (SGG10)**
- 1099 Allyl bromide
- 1100 Allyl chloride
- 1107 Amyl chloride
- 1126 1-Bromobutane
- 1127 Chlorobutanes
- 1134 Chlorobenzene
- 1150 1,2-Dichloroethylene
- 1152 Dichloropentanes
- 1184 Ethylene dichloride
- 1278 1-Chloropropane
- 1279 1,2-Dichloropropane
- 1303 Vinylidene chloride, stabilized
- 1591 *o*-Dichlorobenzene
- 1593 Dichloromethane
- 1605 Ethylene dibromide
- 1647 Methyl bromide and ethylene dibromide mixture, liquid
- 1669 Pentachloroethane
- 1701 Xylyl bromide
- 1702 1,1,2,2-Tetrachloroethane
- 1710 Trichloroethylene
- 1723 Allyl iodide
- 1737 Benzyl bromide
- 1738 Benzyl chloride
- 1846 Carbon tetrachloride
- 1887 Bromochloromethane
- 1888 Chloroform
- 1891 Ethyl bromide
- 1897 Tetrachloroethylene
- 1991 Chloroprene, stabilized
- 2234 Chlorobenzotrifluorides
- 2238 Chlorotoluenes
- 2279 Hexachlorobutadiene
- 2321 Trichlorobenzenes, liquid

**Part 3 – Dangerous Goods List, special provisions and exceptions****3**

|      |                           |
|------|---------------------------|
| 2322 | Trichlorobutene           |
| 2339 | 2-Bromobutane             |
| 2341 | 1-Bromo-3-methylbutane    |
| 2342 | Bromomethylpropanes       |
| 2343 | 2-Bromopentane            |
| 2344 | Bromopropanes             |
| 2356 | 2-Chloropropane           |
| 2362 | 1,1-Dichloroethane        |
| 2387 | Fluorobenzene             |
| 2388 | Fluorotoluenes            |
| 2390 | 2-Iodobutane              |
| 2391 | Iodomethylpropanes        |
| 2392 | Iodopropanes              |
| 2456 | 2-Chloropropene           |
| 2504 | Tetrabromoethane          |
| 2515 | Bromoform                 |
| 2554 | Methylallyl chloride      |
| 2644 | Methyl iodide             |
| 2646 | Hexachlorocyclopentadiene |
| 2664 | Dibromomethane            |
| 2688 | 1-Bromo-3-chloropropane   |
| 2831 | 1,1,1-Trichloroethane     |
| 2872 | Dibromochloropropanes     |

**11 Mercury and mercury compounds (SGG11)**

|      |  |
|------|--|
| 0135 | Mercury fulminate, wetted with not less than 20% water, or mixture of alcohol and water, by mass |
| 1389 | Alkali metal amalgam, liquid   |
| 1392 | Alkaline earth metal amalgam, liquid   |
| 1623 | Mercuric arsenate  |
| 1624 | Mercuric chloride  |
| 1625 | Mercuric nitrate   |
| 1626 | Mercuric potassium cyanide   |
| 1627 | Mercurous nitrate  |
| 1629 | Mercury acetate  |
| 1630 | Mercury ammonium chloride  |
| 1631 | Mercury benzoate   |
| 1634 | Mercury bromides   |
| 1636 | Mercury cyanide  |
| 1637 | Mercury gluconate  |
| 1638 | Mercury iodide   |
| 1639 | Mercury nucleate   |
| 1640 | Mercury oleate   |
| 1641 | Mercury oxide  |
| 1642 | Mercury oxycyanide, desensitized   |
| 1643 | Mercury potassium iodide   |
| 1644 | Mercury salicylate   |
| 1645 | Mercury sulphate   |
| 1646 | Mercury thiocyanate  |
| 1894 | Phenylmercuric hydroxide   |
| 1895 | Phenylmercuric nitrate   |

- 2024 Mercury compound, liquid, n.o.s.  
2025 Mercury compound, solid, n.o.s.  
2026 Phenylmercuric compound, n.o.s.  
2777 Mercury based pesticide, solid, toxic  
2778 Mercury based pesticide, liquid, flammable, toxic  
2809 Mercury  
3011 Mercury based pesticide, liquid, toxic, flammable  
3012 Mercury based pesticide, liquid, toxic  
3401 Alkali metal amalgam, solid  
3402 Alkaline earth metal amalgam, solid
- 12 Nitrites and their mixtures (SGG12)**  
1487 Potassium nitrate and sodium nitrite mixture  
1488 Potassium nitrite  
1500 Sodium nitrite  
2627 Nitrites, inorganic, n.o.s.  
2726 Nickel nitrite  
3219 Nitrites, inorganic, aqueous solution, n.o.s.
- 13 Perchlorates (SGG13)**  
1442 Ammonium perchlorate  
1447 Barium perchlorate, solid  
1455 Calcium perchlorate  
1470 Lead perchlorate, solid  
1475 Magnesium perchlorate  
1481 Perchlorates, inorganic, n.o.s.  
1489 Potassium perchlorate  
1502 Sodium perchlorate  
1508 Strontium perchlorate  
3211 Perchlorates, inorganic, aqueous solution, n.o.s.  
3406 Barium perchlorate solution  
3408 Lead perchlorate solution
- 14 Permanganates (SGG14)**  
1448 Barium permanganate  
1456 Calcium permanganate  
1482 Permanganates, inorganic, n.o.s.  
1490 Potassium permanganate  
1503 Sodium permanganate  
1515 Zinc permanganate  
3214 Permanganates, inorganic, aqueous solution, n.o.s.
- 15 Powdered metals (SGG15)**  
1309 Aluminium powder, coated  
1326 Hafnium powder, wetted with not less than 25% water  
1352 Titanium powder, wetted with not less than 25% water  
1358 Zirconium powder, wetted with not less than 25% water  
1383 Pyrophoric alloy or pyrophoric metal, n.o.s.  
1396 Aluminium powder, uncoated  
1398 Aluminium silicon powder, uncoated  
1418 Magnesium powder or magnesium alloys powder  
1435 Zinc ashes  
1436 Zinc dust or zinc powder  
1854 Barium alloys, pyrophoric

**Part 3 – Dangerous Goods List, special provisions and exceptions**

- 2008 Zirconium powder, dry  
 2009 Zirconium, dry, sheets, strip or coiled wire  
 2545 Hafnium powder, dry  
 2546 Titanium powder, dry  
 2878 Titanium sponge powders  
 2881 Metal catalyst, dry  
 2950 Magnesium granules, coated, particle size not less than 149 microns  
 3078 Cerium, turnings or gritty powder  
 3089 Metal powder, flammable, n.o.s.  
 3170 Aluminium smelting by-products or aluminium remelting by-products  
 3189 Metal powder, self-heating, n.o.s.

**16 Peroxides (SGG16)**

- 1449 Barium peroxide  
 1457 Calcium peroxide  
 1472 Lithium peroxide  
 1476 Magnesium peroxide  
 1483 Peroxides, inorganic, n.o.s.  
 1491 Potassium peroxide  
 1504 Sodium peroxide  
 1509 Strontium peroxide  
 1516 Zinc peroxide  
 2014 Hydrogen peroxide, aqueous solution, 20–60%  
 2015 Hydrogen peroxide, aqueous solution, stabilized  
 2466 Potassium superoxide  
 2547 Sodium superoxide  
 3149 Hydrogen peroxide and peroxyacetic acid mixture  
 3377 Sodium perborate monohydrate  
 3378 Sodium carbonate peroxyhydrate

**17 Azides (SGG17)**

- 0129 Lead azide, wetted with not less than 20% water, or mixture of alcohol and water, by mass  
 0224 Barium azide, dry or wetted with less than 50% water, by mass  
 1571 Barium azide, wetted with not less than 50% water, by mass  
 1687 Sodium azide

**18 Alkalis (SGG18)**

- 1005 Ammonia, anhydrous  
 1160 Dimethylamine, aqueous solution  
 1163 Dimethylhydrazine, unsymmetrical  
 1235 Methylamine, aqueous solution  
 1244 Methylhydrazine  
 1289 Sodium methylate solution in alcohol  
 1382 Potassium sulphide, anhydrous or potassium sulphide with less than 30% water of crystallization  
 1385 Sodium sulphide, anhydrous or sodium sulphide with less than 30% water of crystallization  
 1431 Sodium methylate  
 1604 Ethylenediamine  
 1719 Caustic alkali liquid, n.o.s.  
 1813 Potassium hydroxide, solid  
 1814 Potassium hydroxide solution  
 1819 Sodium aluminate solution  
 1823 Sodium hydroxide, solid  
 1824 Sodium hydroxide solution

|        |   |
|--------|---|
| 1825   | Sodium monoxide   |
| ■ 1835 | Tetramethylammonium hydroxide aqueous solution with more than 2.5% but less than 25% tetramethylammonium hydroxide                    |
| △ 1835 | Tetramethylammonium hydroxide aqueous solution with not more than 2.5% tetramethylammonium hydroxide                                  |
| 1847   | Potassium sulphide, hydrated with not less than 30% water of crystallization  |
| 1849   | Sodium sulphide, hydrated with not less than 30% water  |
| 1907   | Soda lime with more than 4% sodium hydroxide  |
| 1922   | Pyrrolidine   |
| 2029   | Hydrazine, anhydrous  |
| 2030   | Hydrazine, aqueous solution with more than 37% hydrazine, by mass   |
| 2033   | Potassium monoxide  |
| 2073   | Ammonia solution, relative density less than 0.880 at 15°C in water, with more than 35% but not more than 50% ammonia                 |
| 2079   | Diethylenetriamine  |
| 2259   | Triethylenetetramine  |
| 2270   | Ethylamine, aqueous solution, with not less than 50% but not more than 70% ethylamine   |
| 2318   | Sodium hydrosulphide with less than 25% water of crystallization  |
| 2320   | Tetraethylenepentamine  |
| 2379   | 1,3-Dimethylbutylamine  |
| 2382   | Dimethylhydrazine, symmetrical  |
| 2386   | 1-Ethylpiperidine   |
| 2399   | 1-Methylpiperidine  |
| 2401   | Piperidine  |
| 2491   | Ethanolamine or ethanolamine solution   |
| 2579   | Piperazine  |
| 2671   | Aminopyridines ( <i>o</i> -, <i>m</i> -, <i>p</i> -)  |
| 2672   | Ammonia solution relative density between 0.880 and 0.957 at 15°C in water, with more than 10% but not more than 35% ammonia, by mass |
| 2677   | Rubidium hydroxide solution   |
| 2678   | Rubidium hydroxide  |
| 2679   | Lithium hydroxide solution  |
| 2680   | Lithium hydroxide   |
| 2681   | Caesium hydroxide solution  |
| 2682   | Caesium hydroxide   |
| 2683   | Ammonium sulphide solution  |
| 2733   | Amines, flammable, corrosive, n.o.s. or polyamines, flammable, corrosive, n.o.s.  |
| 2734   | Amines, liquid, corrosive, flammable, n.o.s. or polyamines, liquid, corrosive, flammable, n.o.s.                                      |
| 2735   | Amines, liquid, corrosive, n.o.s. or polyamines, liquid, corrosive, n.o.s.  |
| 2795   | Batteries, wet, filled with alkali, electric storage  |
| 2797   | Battery fluid, alkali   |
| 2818   | Ammonium polysulphide solution  |
| 2949   | Sodium hydrosulphide, hydrated with not less than 25% water of crystallization  |
| 3028   | Batteries, dry, containing potassium hydroxide, solid electric storage  |
| 3073   | Vinylpyridines, stabilized  |
| 3206   | Alkali metal alcoholates, self-heating, corrosive, n.o.s.   |
| 3253   | Disodium trioxosilicate   |
| 3259   | Amines, solid, corrosive, n.o.s. or polyamines, solid, corrosive, n.o.s.  |
| 3262   | Corrosive solid, basic, inorganic, n.o.s.   |
| 3263   | Corrosive solid, basic, organic, n.o.s.   |
| 3266   | Corrosive liquid, basic, inorganic, n.o.s.  |

**Part 3 – Dangerous Goods List, special provisions and exceptions**

---

- 3
- 3267 Corrosive liquid, basic, organic, n.o.s.
  - 3274 Alcoholates solution, n.o.s. in alcohol
  - 3293 Hydrazine, aqueous solution with not more than 37% hydrazine, by mass
  - 3318 Ammonia solution, relative density less than 0.880 at 15°C in water, with more than 50% ammonia
  - 3320 Sodium borohydride and sodium hydroxide solution with not more than 12% sodium borohydride and not more than 40% sodium hydroxide, by mass
  - 3423 Tetramethylammonium hydroxide, solid
  - 3484 Hydrazine aqueous solution, flammable, with more than 37% hydrazine, by mass
  - 3560 Tetramethylammonium hydroxide aqueous solution with not less than 25% tetramethylammonium hydroxide

## Chapter 3.2

### *Dangerous Goods List*

#### 3.2.1 Structure of the Dangerous Goods List

The Dangerous Goods List is divided into 18 columns as follows:

- Column 1    **UN No.** – this column contains the United Nations number assigned to a dangerous good by the United Nations Sub-Committee of Experts on the Transport of Dangerous Goods (UN List).
- Column 2    **Proper shipping name (PSN)** – this column contains the proper shipping names in upper-case characters, which may have to be followed by additional descriptive text in lower-case characters (see 3.1.2). Proper shipping names may be shown in plural where isomers of similar classification exist. Hydrates may be included under the proper shipping name for the anhydrous substances. Unless otherwise indicated for an entry in the Dangerous Goods List, the word “SOLUTION” in a proper shipping name means one or more named dangerous goods dissolved in a liquid that is not otherwise subject to this Code. When a flashpoint is mentioned in this column, the data is based on closed-cup (c.c.) methods.
- Column 3    **Class or division** – this column contains the class and, in the case of class 1, the division and the compatibility group assigned to the substance or article according to the classification system described in part 2, chapter 2.1.
- Column 4    **Subsidiary hazard(s)** – this column contains the class number(s) of any subsidiary hazard(s) which have been identified by applying the classification system described in part 2. This column also identifies a dangerous good as a marine pollutant as follows:
- P – Marine pollutant: a non-exhaustive list of known marine pollutants, based on previous criteria and assignment. The absence of the symbol P or the presence of a “-” in that column does not preclude the application of 2.10.3.
- △ Column 5    **Packing group** – this column contains the packing group number (i.e. I, II or III) where assigned to the substance. If more than one packing group is indicated for the entry, the packing group of the substance or formulation to be transported shall be determined, based on its properties, through application of the hazard grouping criteria as provided in part 2.
- Column 6    **Special provisions** – this column contains a number referring to any special provision(s) indicated in chapter 3.3 that is relevant to the substance or article. Special provisions apply to all packing groups permitted for a particular substance or article unless the wording makes it otherwise apparent. The special provision numbers specific to the sea mode start from 900.
- Note:** When a special provision is no longer needed, this special provision is deleted but the special provision number is not allocated again, in order not to confuse the users of this Code. For this reason, some of the numbers are missing.
- Column 7a    **Limited quantities** – this column provides the maximum quantity per inner packaging or article for transporting dangerous goods as limited quantities in accordance with chapter 3.4.
- Column 7b    **Excepted quantities** – this column provides an alpha-numeric code described in subsection 3.5.1.2 which indicates the maximum quantity per inner and outer packaging for transporting dangerous goods as excepted quantities in accordance with chapter 3.5.
- Column 8    **Packing instructions** – this column contains alpha-numeric codes which refer to the relevant packing instruction(s) in 4.1.4. The packing instructions indicate the packagings (including large packagings) which may be used for the transport of substances and articles.
- A code including the letter “P” refers to packing instructions for the use of packagings described in chapter 6.1, 6.2 or 6.3.

## Part 3 – Dangerous Goods List, special provisions and exceptions

- A code including the letters “LP” refers to packing instructions for the use of large packagings described in chapter 6.6.
- When a code including the letter(s) “P” or “LP” is not provided, it means that the substance is not allowed in that type of packaging.
- Column 9 **Special packing provisions** – this column contains alpha-numeric codes which refer to the relevant special packing provisions specified in 4.1.4. The special packing provisions indicate the packagings (including large packagings).
- A special packing provision including the letters “PP” refers to a special packing provision applicable to the use of a packing instruction bearing the Code “P” in 4.1.4.1.
- A special packing provision including the letter “L” refers to a special packing provision applicable to a packing instruction bearing the code “LP” in 4.1.4.3.
- Column 10 **IBC packing instructions** – this column contains alpha-numeric codes that refer to the relevant IBC instruction, which indicates the type of IBC that shall be used for the transport of the substance under reference. A code including the letters “IBC” refers to packing instructions for the use of IBCs described in chapter 6.5. When a code is not provided, it means the substance is not authorized in IBC.
- Column 11 **IBC special provisions** – this column contains an alpha-numeric code, including the letter “B”, which refers to special packing provisions applicable to the use of packing instructions bearing the code “IBC” in 4.1.4.2.
- Column 12 [Reserved]
- Column 13 **Tank and bulk container instructions** – this column contains T codes (see 4.2.5.2.6) applicable to the transport of dangerous goods in portable tanks and road tank vehicles.
- When a T code is not provided in this column, it means that the dangerous goods are not authorized for transport in tanks unless specifically approved by the competent authority.
- A code including the letters “BK” refers to the type of bulk containers used for the transport of bulk goods described in chapters 4.3 and 6.9.
- The gases authorized for transport in MEGCs are indicated in the column “MEGC” in tables 1 and 2 of packing instruction P200 in 4.1.4.1.
- Column 14 **Tank special provisions** – this column contains TP notes (see 4.2.5.3) applicable to the transport of dangerous goods in portable tanks and road tank vehicles. The TP notes specified in this column apply to the portable tanks specified in column 13.
- Column 15 **EmS** – this column refers to the relevant emergency schedules for FIRE and SPILLAGE in “The EmS Guide – Revised Emergency Response Procedures for Ships Carrying Dangerous Goods”.
- The first EmS code refers to the relevant Fire Schedule (e.g. Fire Schedule Alfa “F-A” General Fire Schedule).
- The second EmS code refers to the relevant Spillage Schedule (e.g. Spillage Schedule Alfa “S-A” Toxic Substances).
- Underlined EmS codes (special cases) indicate a substance, material or article for which additional advice is given in the emergency response procedures.
- For dangerous goods offered for transport under N.O.S. entries or other generic entries, the most relevant emergency response procedures may vary with the properties of the hazardous constituents. As a consequence, shippers may have to declare different EmS codes from those indicated, if, to their knowledge, such codes are more appropriate.
- The provisions in this column are not mandatory.
- Column 16a **Stowage and handling** – this column contains the stowage and handling codes as specified in 7.1.5 and 7.1.6.
- Column 16b **Segregation** – this column contains the segregation group codes as specified in 7.2.5.2 and the segregation codes as specified in 7.2.8.
- Column 17 **Properties and observations** – this column contains properties of and observations on the dangerous goods listed. The provisions in this column are not mandatory.
- Properties of most gases include an indication of its density in relation to air. The figures in brackets give the density relative to air.
- .1 “lighter than air” when the vapour density is down to half that of air;

- .2 “much lighter than air” when the vapour density is less than half that of air;
- .3 “heavier than air” when the vapour density is up to twice that of air; and
- .4 “much heavier than air” when the vapour density is more than twice that of air.

When explosive limits are given, these refer to the volume percentage of the vapour of the substance when mixed with air.

The ease and extent to which different liquids mix with water varies greatly and most entries have included an indication of miscibility. In these cases “miscible with water” normally means capable of being mixed with water in all proportions to form a completely homogeneous liquid.

Column 18 UN No. – see column 1.

### 3.2.2 Abbreviations and symbols

The following abbreviations and symbols are used in the Dangerous Goods List and have the meanings shown:

| Abbreviation/symbol | Column | Meaning                 |
|---------------------|--------|-------------------------|
| N.O.S.              | 2      | Not otherwise specified |
| P                   | 4      | Marine pollutant        |

| 1001   | –                                  | –             | –                      | <u>F-D, S-U</u>         | Category D SW1 SW2 | Flammable gas with slight odour. Explosive limits: 2.1% to 80%. Lighter than air (0.907). Rough handling and exposure to local heating should be avoided, since these conditions may result in delayed explosion. Empty cylinders should be carried with the same precautions as filled cylinders.  | 1001   |
| 1002   | –                                  | –             | –                      | F-C, S-V                | Category A         | Non-flammable gas.  | 1002   |
| 1003   | –                                  | T75           | –                      | <u>F-C, S-W</u>         | Category D         | Liquefied, non-flammable gas. Strong oxidizing agent. Mixtures of liquid air with combustible materials or oils may explode. May ignite organic materials.  | 1003   |
| 1005   | –                                  | T50           | –                      | F-C, S-U                | Category D SW2     | Liquefied, non-flammable, toxic and corrosive gas with a pungent odour. Lighter than air (0.6). Suffocating in low concentrations. Even though this substance has a flammability hazard, it only exhibits such hazard under extreme fire conditions in confined areas. Reacts violently with acids. Highly irritating to skin, eyes and mucous membranes.             | 1005   |
| 1006   | –                                  | –             | –                      | F-C, S-V                | Category A         | Inert gas. Heavier than air (1.4).  | 1006   |
| 1008   | –                                  | –             | –                      | F-C, S-U                | Category D SW2     | Non-flammable, toxic and corrosive gas. Forms dense white corrosive fumes in moist air. Reacts violently with water, evolving hydrogen fluoride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to glass and most metals. Much heavier than air (2.35). Highly irritating to skin, eyes and mucous membranes. | 1008   |
| 1009   | –                                  | T50           | –                      | F-C, S-V                | Category A         | Liquefied, non-flammable gas with a slight odour. Much heavier than air (5.2).  | 1009   |
| 1010   | –                                  | T50           | –                      | F-D, S-U                | Category B SW1 SW2 | Liquefied, flammable gas with an unpleasant odour. Explosive limits: 2% to 12%. Heavier than air (1.84).  | 1010   |
| 1011   | –                                  | T50           | –                      | F-D, S-U                | Category E SW2     | Flammable hydrocarbon gas. Explosive limits: 1.8% to 8.4%. Heavier than air (2.11).   | 1011   |
| 1012   | –                                  | T50           | –                      | F-D, S-U                | Category E SW2     | Flammable hydrocarbon gas. Explosive limits: 1.6% to 10%. Heavier than air (2.0).   | 1012   |
| 1013   | –                                  | –             | –                      | F-C, S-V                | Category A         | Liquefied, non-flammable gas. Heavier than air (1.5). Cannot remain in the liquid state above 31°C.   | 1013   |
| 1016   | –                                  | –             | –                      | F-D, S-U                | Category D SW2     | Flammable, toxic, odourless gas. Explosive limits: 12% to 75%. Slightly lighter than air (0.97).  | 1016   |
| 1017   | –                                  | T50           | TP19                   | F-C, S-U                | Category D SW2     | Non-flammable, toxic and corrosive yellow gas with a pungent odour. Corrosive to glass and to most metals. Much heavier than air (2.4). Highly irritating to skin, eyes and mucous membranes. Powerful oxidant which may cause fire.  | 1017   |
| 1018   | –                                  | T50           | –                      | F-C, S-V                | Category A         | Liquefied, non-flammable gas with a chloroform-like odour. Much heavier than air (3.0).   | 1018   |

Flashpoint: –39°C c.c. Explosive limits: 1.7% to 10.1%. Boiling point: 55°C. Miscible with water. Harmful if swallowed. Causes burns to skin, eyes and mucous membranes. Higher concentrations cause dangerous lung irritation.  | 1154   |
| –      | T11                                | TP2                | F-E, S-D               | Category E<br>SW2       | –                                   | Colourless, volatile and mobile liquid with a pleasant aromatic odour. Flashpoint: –40°C c.c. Explosive limits: 1.7% to 48%. Boiling point: 34°C. Immiscible with water. In the presence of oxygen or on long standing or exposure to sunlight, unstable peroxides sometimes form; these may explode spontaneously or when heated. Strongly narcotic. Readily ignited by static electricity. | 1155   |
| –      | T4                                 | TP1                | F-E, S-D               | Category B              | –                                   | Colourless, mobile liquid. Flashpoint: 13°C c.c. Lower explosive limit: 1.6%. Immiscible with water.   | 1156   |
| –      | T2                                 | TP1                | F-E, S-D               | Category A              | –                                   | Colourless liquid. Flashpoint: 49°C c.c. Explosive limits: 0.8% to 7.1%. Immiscible with water.  | 1157   |
| –      | T7                                 | TP1                | F-E, S-C               | Category B              | SG35                                | Colourless, volatile liquid with a fishy odour. Flashpoint: –7°C c.c. Explosive limits: 1.1% to 7.1%. Partially miscible with water. Harmful by inhalation. Causes burns to skin, eyes and mucous membranes.   | 1158   |
| –      | T4                                 | TP1                | F-E, S-D               | Category E<br>SW2       | –                                   | Colourless liquid with an ether-like odour. Flashpoint: –29°C c.c. Explosive limits: 1.1% to 21%. Immiscible with water. In the presence of oxygen or on long standing or exposure to sunlight, unstable peroxides sometimes form; these may explode spontaneously or when heated. Strongly narcotic. Readily ignited by static electricity.   | 1159   |
| –      | T7                                 | TP1                | F-E, S-C               | Category B              | SGG18<br>SG35                       | Aqueous solution of a flammable gas with an ammonia-like odour. Flashpoint for 60% solution in water: –32°C c.c. Explosive limits: 2.8% to 14.4%. Boiling point for 60% solution in water: 36°C. Flashpoint for 25% solution in water: 0°C c.c. Miscible with water. Harmful by inhalation. Causes burns to skin, eyes and mucous membranes. Reacts violently with acids.                    | 1160   |
| –      | T4                                 | TP1                | F-E, S-D               | Category B              | –                                   | Colourless liquid. Immiscible with water. Flashpoint: 18°C c.c.  | 1161   |
| –      | T10                                | TP2<br>TP7<br>TP13 | F-E, S-C               | Category B<br>SW2       | –                                   | Colourless liquid with a pungent odour. Flashpoint: –9°C c.c. Explosive limits: 1.4% to 9.5%. Immiscible with water. Reacts with water to form a complex mixture of dimethylsiloxanes and evolves hydrogen chloride, a toxic and corrosive gas. Harmful by inhalation. Causes burns to skin, eyes and mucous membranes.  | 1162   |
| –      | T20                                | TP2<br>TP13        | F-E, S-C               | Category D<br>SW2       | SGG18<br>SG5<br>SG8<br>SG13<br>SG35 | Colourless liquid with an ammonia-like odour. Flashpoint: –18°C c.c. Explosive limits: 2% to 95%. Miscible with water, generating heat. Reacts violently with acids. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. May react dangerously with oxidizing substances.  | 1163   |
| –      | T7                                 | TP2                | F-E, S-D               | Category E<br>SW2       | –                                   | Colourless liquid with a disagreeable odour. Flashpoint: –37°C c.c. Explosive limits: 2.2% to 19.7%. Boiling point: 37°C. Immiscible with water. When involved in a fire, evolves toxic gases. Narcotic in high concentrations.  | 1164   |
| –      | T4                                 | TP1                | F-E, S-D               | Category B              | –                                   | Colourless liquid with an ether-like odour. Flashpoint: 12°C c.c. Explosive limits: 2% to 22%. Miscible with water. Harmful by inhalation.   | 1165   |

| –      | T2                                 | TP1                | F-E, S-D               | Category A               | –  | Colourless, volatile liquid with a pineapple-like odour. Flashpoint: 26°C c.c. Immiscible with water.   | 1180   |
| –      | T7                                 | TP2                | F-E, S-D               | Category A               | –  | Colourless, flammable liquid with a pungent and fruity odour. Flashpoint: 54°C c.c. Immiscible with water. When heated, evolves toxic and corrosive fumes. Toxic if swallowed, by skin contact or by inhalation.  | 1181   |
| –      | T20                                | TP2<br>TP13        | F-E, S-C               | Category D<br>SW2        | SGG1<br>SG5<br>SG8<br>SG36<br>SG49                         | Colourless liquid. Flashpoint: 16°C c.c. Reacts and decomposes with water or heat, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes.                         | 1182   |
| –      | T14                                | TP2<br>TP7<br>TP13 | F-G, S-O               | Category D<br>SW2<br>H1  | SGG1<br>SG5<br>SG8<br>SG13<br>SG25<br>SG26<br>SG36<br>SG49 | Colourless, very volatile liquid with a pungent odour. Flashpoint: –1°C c.c. Immiscible with water. Reacts violently with water or steam to produce heat which may lead to self-ignition; toxic and corrosive fumes will be evolved. May react vigorously in contact with oxidizing substances. Causes burns to skin, eyes and mucous membranes.                            | 1183   |
| –      | T7                                 | TP1                | F-E, S-D               | Category B<br>SW2        | SGG10  | Colourless liquid with a chloroform-like odour. Flashpoint: 13°C c.c. Explosive limits: 6.2% to 15.9%. Immiscible with water. Toxic by inhalation. Irritating to skin, eyes and mucous membranes.   | 1184   |
| –      | T22                                | TP2<br>TP13        | F-E, S-D               | Category D<br>SW1<br>SW2 | –  | Colourless oily flammable liquid with a pungent ammonia-like odour. Flashpoint: –13°C c.c. Boiling point: 55°C. Explosive limits: 3.6% to 6.0%. Miscible with water. Highly toxic if swallowed, by skin contact or by inhalation.   | 1185   |

| –      | T4                                 | TP1                | F-E, S-D               | Category B              | –                | Colourless liquid. Flashpoint: –1°C c.c. Explosive limits: 1.8% to 11.5%. Miscible with water.  | 1193   |
| –      | –                                  | –                  | F-E, S-D               | Category D<br>SW2       | –                | Alcoholic solution of ethyl nitrite. Extremely volatile, with an aromatic, ethereal odour. Explosive limits of the pure product: 3% to 50%. Boiling point of pure product: 17°C. Miscible or partially miscible with water. Decomposes under exposure to air, light, water or heat to evolve toxic nitrous fumes. Toxic if swallowed, by skin contact or by inhalation. Inhalation of ethyl nitrite vapours, even in small quantities, rapidly affects the heart and can be dangerous. Transport of ETHYL NITRITE pure is prohibited. | 1194   |
| –      | T4                                 | TP1                | F-E, S-D               | Category B              | –                | Colourless liquid with a pineapple-like odour. Flashpoint: 12°C c.c. Explosive limits: 1.8% to 11%. Immiscible with water.  | 1195   |
| –      | T10                                | TP2<br>TP7<br>TP13 | F-E, S-C               | Category B<br>SW2       | –                | Colourless liquid with a pungent odour. Flashpoint: 14°C c.c. Readily hydrolysed by moisture, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. Causes burns to skin and eyes. Irritating to mucous membranes.   | 1196   |
| –      | T4                                 | TP1<br>TP8         | F-E, S-D               | Category B              | –                | Usually consist of alcoholic solutions. Miscibility with water depends upon the composition.  | 1197   |
| –      | T2                                 | TP1                | F-E, S-D               | Category A              | –                | See entry above.  | 1197   |
| –      | T4                                 | TP1                | F-E, S-C               | Category A<br>SW2       | –                | Colourless liquids with a pungent odour. Flashpoint: 32–60°C c.c. Miscible with water. Irritating to skin, eyes and mucous membranes.   | 1198   |
| –      | T7                                 | TP2                | F-E, S-D               | Category A              | –                | Colourless or reddish-brown, mobile liquids with a pungent odour. Miscible with water. Explosive limits for 2-FURALDEHYDE: 2.1% to 19.3%. Flashpoints: 2-FURALDEHYDE 60°C c.c., 3-FURALDEHYDE 48°C c.c. Toxic if swallowed, by skin contact or by inhalation.   | 1199   |
| –      | T4                                 | TP1                | F-E, S-D               | Category B              | –                | Colourless, oily liquid with a disagreeable odour. A mixture consisting of amyl alcohols. Immiscible with water.  | 1201   |
| –      | T2                                 | TP1                | F-E, S-D               | Category A              | –                | See entry above.  | 1201   |
| –      | T2                                 | TP1                | F-E, S-E               | Category A              | –                | Immiscible with water.  | 1202   |
| –      | T4                                 | TP1                | F-E, S-E               | Category E              | –                | Immiscible with water.  | 1203   |
| –      | –                                  | –                  | F-E, S-D               | Category B              | –                | Immiscible with water. Ignites readily. When involved in a fire, evolves toxic nitrous fumes. Not explosive in this state but damage to, or leakage from, a package may allow solvent to evaporate and thus leave the nitroglycerin in an explosive state.  | △ 1204 |
| –      | T4                                 | TP2                | F-E, S-D               | Category B              | –                | Colourless, volatile liquids. Explosive limits: 1.1% to 6.7%. n-HEPTANE: flashpoint –4°C c.c. Immiscible with water. Irritating to skin, eyes and mucous membranes.   | 1206   |

| -      | -                                  | -                  | F-E, S-D               | Category B               | -   | See entry above.   | 1308   |
| -      | T3                                 | TP33               | F-G, S-G               | Category A<br>H1         | SGG15<br>SG17<br>SG25<br>SG26<br>SG32<br>SG35<br>SG36<br>SG52 | If uncoated, it possesses the property of evolving hydrogen gas when in contact with water, especially seawater; if treated with oil or wax, it does not at ordinary temperatures. Reacts readily with acids and caustic alkalis, evolving hydrogen, a flammable gas. Reacts readily with iron oxide, producing a thermite effect. May form explosive mixtures with oxidizing substances. In the event of breakage of receptacles, the scattered powder is readily ignited by sparks or open flame and may give rise to an explosive atmosphere. | 1309   |
| -      | T1                                 | TP33               | F-G, S-G               | Category A<br>H1         | SGG15<br>SG17<br>SG25<br>SG26<br>SG32<br>SG35<br>SG36<br>SG52 | See entry above.   | 1309   |
| -      | -                                  | -                  | F-B, S-J               | Category D               | SGG2<br>SG7<br>SG30   | Desensitized explosive. Substance in pure form consists of yellow crystals. Explosive and sensitive to friction in the dry state. May form extremely sensitive compounds with heavy metals or their salts. Harmful if swallowed or by skin contact.  | 1310   |
| -      | T1                                 | TP33               | F-A, S-I               | Category A               | -   | White, translucent lumps. Camphor-like odour. Insoluble in water. Harmful by ingestion.  | 1312   |
| -      | T1                                 | TP33               | F-A, S-I               | Category A               | -   | Yellowish-white, amorphous powder or lumps. Insoluble in water. Liable to spontaneous heating. Irritating to skin and mucous membranes.  | 1313   |
| -      | T1                                 | TP33               | F-A, S-I               | Category A               | -   | Yellowish-white, amorphous powder or lumps. Insoluble in water. Liable to spontaneous heating. Irritating to skin and mucous membranes.  | 1314   |

Contains 2% to 10% alkaline earth metals and may contain up to 98% mercury. Reacts with moisture, water or acids, evolving hydrogen, a flammable gas. When heated, evolves toxic vapours.  | 1392   |
| –      | T3                                 | TP33               | F-G, S-N               | Category E<br>H1                | SG26<br>SG35                          | When containing a substantial proportion of alkaline earth metals, readily decomposed by water and reacts violently with acids, evolving hydrogen, which may be ignited by the heat of the reaction.   | 1393   |
| –      | T3                                 | TP33               | F-G, S-N               | Category A<br>H1                | SG26<br>SG35                          | Yellow crystals or powder. In contact with water, rapidly evolves methane, a flammable gas. Reacts violently with acids.   | 1394   |
| –      | T3<br>BK2                          | TP33               | F-G, S-N               | Category A<br>SW2<br>SW5<br>H1  | SG26<br>SG32<br>SG35<br>SG36          | In contact with water, caustic alkalis or acids, evolves hydrogen, a flammable gas. Impurities may, under similar circumstances, produce phosphine and arsine, which are highly toxic gases.   | 1395   |
| –      | T3                                 | TP33               | F-G, S-O               | Category A<br>H1                | SGG15<br>SG26<br>SG32<br>SG35<br>SG36 | In contact with water, caustic alkalis or acids, evolves hydrogen, a flammable gas. When finely divided aluminium dust is scattered, it is easily ignited by naked lights, causing explosion. May explode when in contact with oxidizing substances. Reacts with liquid halogenated hydrocarbons.  | 1396   |
| –      | T1                                 | TP33               | F-G, S-O               | Category A<br>H1                | SGG15<br>SG26<br>SG32<br>SG35<br>SG36 | See entry above.   | 1396   |

Part 3 – Dangerous Goods List, special provisions and exceptions

Reacts with acids or decomposes slowly in contact with water or damp air, evolving phosphine, a spontaneously flammable and highly toxic gas. Reacts violently with oxidizing substances. Toxic if swallowed, by skin contact or by inhalation.   | 1397   |
| –      | T1<br>BK2                          | TP33          | F-G, S-N               | Category A<br>SW2<br>SW5<br>H1 | SGG15<br>SG26<br>SG32<br>SG35<br>SG36 | In contact with water, caustic alkalis or acids, generates heat and evolves hydrogen, a flammable gas. May also evolve silanes, which are toxic and may ignite spontaneously.   | 1398   |
| –      | T3                                 | TP33          | F-G, S-O               | Category E<br>H1               | SG26<br>SG35                          | Readily decomposes in water and reacts violently with acids, evolving hydrogen, which may be ignited by the heat of the reaction. Harmful if swallowed or by dust inhalation.   | 1400   |
| –      | T3                                 | TP33          | F-G, S-O               | Category E<br>H1               | SG26<br>SG35                          | Readily decomposes in water and reacts violently with acids, evolving hydrogen, which may be ignited by the heat of the reaction.   | 1401   |
| –      | –                                  | –             | F-G, S-N               | Category B<br>H1               | SG26<br>SG35                          | Solid. In contact with water, rapidly evolves acetylene, a highly flammable gas, which may be ignited by the heat of the reaction. Acetylene forms highly explosive compounds with salts of some heavy metals. Reacts violently with acids.   | 1402   |
| –      | T3                                 | TP33          | F-G, S-N               | Category B<br>H1               | SG26<br>SG35                          | See entry above.  | 1402   |
| –      | T1                                 | TP33          | F-G, S-N               | Category A<br>H1               | SG26<br>SG35                          | Powder or granules. Contains calcium carbide as an impurity. In contact with water, evolves ammonia and acetylene, which is a highly flammable gas. Reacts vigorously with acids.   | 1403   |
| –      | –                                  | –             | F-G, S-O               | Category E<br>H1               | SG26<br>SG35                          | Solid. In contact with water, acids or moisture, evolves hydrogen, which may be ignited by the heat of the reaction.  | 1404   |
| –      | T3                                 | TP33          | F-G, S-N               | Category B<br>SW5<br>H1        | SG26<br>SG35                          | In contact with water, evolves hydrogen, a flammable gas. If calcium carbide is present as an impurity, acetylene will also be evolved. In contact with acids, evolves silane, a spontaneously flammable gas.   | 1405   |
| –      | T1                                 | TP33          | F-G, S-N               | Category B<br>SW5<br>H1        | SG26<br>SG35                          | See entry above.  | 1405   |
| –      | –                                  | –             | F-G, S-N               | Category D<br>H1               | SG26<br>SG35                          | White, ductile, soft metal. Reacts violently with moisture, water or acids, evolving hydrogen, which may be ignited by the heat of the reaction. Highly reactive, sometimes with explosive effect.  | 1407   |
| –      | T1<br>BK2                          | TP33          | F-G, S-N               | Category A<br>SW2<br>SW5<br>H1 | SG26<br>SG35<br>SG36                  | In contact with moisture, water, alkalis or acids, may evolve hydrogen, a flammable gas, which may form explosive mixtures with air, and also arsine and phosphine, which are highly toxic gases. These gases are evolved in proportions which, under mechanically ventilated conditions, make the poison hazard by far predominant over the explosion hazard. The rate of gas evolution is greatest from freshly broken surfaces, so is liable to increase whenever the cargo is disturbed, such as during loading. Toxic if swallowed, by skin contact or by vapour inhalation. | 1408   |
| –      | –                                  | –             | F-G, S-L               | Category D<br>H1               | SG26<br>SG35                          | Solids. React with water, moisture or acids, evolving hydrogen, which may be ignited by the heat of the reaction.   | 1409   |
| –      | T3                                 | TP33          | F-G, S-L               | Category D<br>H1               | SG26<br>SG35                          | See entry above.  | 1409   |
| –      | –                                  | –             | F-G, S-M               | Category E<br>H1               | SG26<br>SG35                          | White powder. In contact with water, acids or moisture, evolves hydrogen, which may be ignited by the heat of the reaction.   | 1410   |
| –      | –                                  | –             | F-G, S-M               | Category D<br>SW2<br>H1        | SG26                                  | Clear, colourless solution of lithium aluminium hydride in ether. Reacts readily with water, evolving hydrogen, a flammable gas. Evaporates readily to leave a residue which is easily ignited by a spark or friction.  | 1411   |
| –      | –                                  | –             | F-G, S-O               | Category E<br>H1               | SG26<br>SG35                          | Crystalline, hygroscopic solid. In contact with water, acids or moisture, evolves hydrogen, which may be ignited by the heat of the reaction.   | 1413   |

| –      | T9                                 | TP7<br>TP33        | F-G, S-N               | Category E H1           | SG26<br>SG35                  | White, ductile, soft metal. Floats on water. Readily decomposes in water and reacts violently with acids, evolving hydrogen, which may be ignited by the heat of the reaction. For fire-fighting purposes, dry lithium chloride powder, dry sodium chloride or graphite powder should be carried on board when this substance is transported.  | 1415   |
| –      | T3                                 | TP33               | F-G, S-N               | Category A SW5 H1       | SG26                          | Shiny lumps, crystals or powder, with sharp irritating odour. Reacts readily with water, evolving hydrogen and silane, flammable gases. Enough heat may be generated to ignite the gas mixture in air.   | 1417   |
| –      | –                                  | –                  | F-G, S-O               | Category A H1           | SGG15<br>SG26<br>SG32<br>SG35 | In contact with moisture, water or acids, evolves hydrogen, a flammable gas. Magnesium dust is easily ignited, causing explosion. May explode when in contact with oxidizing substances. For fire-fighting purposes, dry lithium chloride powder, dry sodium chloride or graphite powder should be carried on board when this substance is transported. Reacts with liquid halogenated hydrocarbons. | 1418   |
| –      | T3                                 | TP33               | F-G, S-O               | Category A H1           | SGG15<br>SG26<br>SG32<br>SG35 | See entry above.   | 1418   |

| –      | T3                                 | TP33          | F-H, S-Q               | Category A               | SGG4<br>SG38<br>SG49                         | Solids. React vigorously with sulphuric acid. React fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. Transport of ammonium chlorate and mixtures of a chlorate with an ammonium salt is prohibited.   | 1461   |
| –      | T3                                 | TP33          | F-H, S-Q               | Category A               | SGG5<br>SG38<br>SG49                         | Solids. React vigorously with sulphuric acid. React fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. Transport of ammonium chlorite and mixtures of a chlorite with an ammonium salt is prohibited.   | 1462   |
| –      | T3                                 | TP33          | F-A, S-Q               | Category A               | SG6<br>SG16<br>SG19                          | Dark purplish-red deliquescent crystals. Soluble in water. Mixtures with combustible material may ignite spontaneously and may even explode. In the presence of moisture, corrosive to most metals. Causes burns to skin, eyes and mucous membranes.  | 1463   |
| –      | T1                                 | TP33          | F-A, S-Q               | Category A               | –  | Hygroscopic solid. Mixture of neodymium nitrate and praseodymium nitrate. Mixtures with combustible material are readily ignited and may burn fiercely. Harmful if swallowed.   | 1465   |
| –      | T1                                 | TP33          | F-A, S-Q               | Category A               | –  | Violet deliquescent crystals. Soluble in water. Melting point: 47°C. Mixtures with combustible material are readily ignited and may burn fiercely. Solutions in water are slightly corrosive to most metals. Harmful if swallowed.  | 1466   |
| –      | T1                                 | TP33          | F-A, S-Q               | Category A               | SG45   | White granules. Soluble in water. Mixtures with combustible material are sensitive to friction and are liable to ignite. NITROGUANIDINE is a different substance.   | 1467   |
| –      | T3                                 | TP33          | F-A, S-Q               | Category A               | SGG7<br>SGG9                                 | White crystals. Soluble in water. Mixtures with combustible material are readily ignited and may burn fiercely. Toxic if swallowed, by skin contact or by dust inhalation.  | 1469   |
| –      | T3                                 | TP33          | F-H, S-Q               | Category A               | SGG7<br>SGG9<br>SG13<br>SG38<br>SG49         | White crystals or powder. Soluble in water. Reacts vigorously with sulphuric acid. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. Toxic if swallowed, by skin contact or by dust inhalation. | 1470   |
| –      | T3                                 | TP33          | F-H, S-Q               | Category A<br>SW1<br>SW8 | SGG8<br>SG35<br>SG38<br>SG49<br>SG53<br>SG60 | White powder with pungent odour. Soluble in water. Critical ambient temperature of decomposition may be as low as 60°C. May cause fire in contact with organic material or ammonium compounds. Reacts with acids, evolving chlorine, an irritating, corrosive and toxic gas. In the presence of moisture, corrosive to most metals. Dust irritates mucous membranes.  | 1471   |

React vigorously with sulphuric acid. React fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. Transport of ammonium permanganate and mixtures of a permanganate with an ammonium salt is <b>prohibited</b> . | 1482   |

| –      | T3                                 | TP33          | F-H, S-Q               | Category A               | SGG13<br>SG38<br>SG49                         | Colourless crystals or powder, soluble in water. Reacts vigorously with sulphuric acid. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion.                                  | 1508   |
| –      | T3                                 | TP33          | F-G, S-Q               | Category C<br>H1         | SGG16<br>SG16<br>SG26<br>SG35<br>SG59         | Colourless powder. Particularly if wetted with small quantities of water, a mixture with combustible materials may ignite following impact or friction. When involved in a fire, or in contact with water or acids, decomposes, evolving oxygen.   | 1509   |
| –      | –                                  | –             | F-H, S-Q               | Category D<br>SW2        | SG16  | Colourless liquid with a pungent odour. Freezing point: 12.5°C. Insoluble in water. Mixtures with combustible material are readily ignited, burn fiercely and may also explode by friction or shock. Highly toxic if swallowed, by skin contact or by inhalation.  | 1510   |
| –      | T1                                 | TP33          | F-A, S-Q               | Category A<br>H1         | –   | White crystals or powder. Soluble in water. Mixtures with combustible material are sensitive to friction and are liable to ignite. Irritating to skin, eyes and mucous membranes.  | 1511   |
| –      | –                                  | –             | –                      | –                        | –   | Transport is prohibited.   | 1512   |
| –      | T3                                 | TP33          | F-H, S-Q               | Category A               | SGG4<br>SGG7<br>SG38<br>SG49                  | Colourless or yellowish crystals. Soluble in water. Reacts vigorously with sulphuric acid. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion.                               | 1513   |
| –      | T3                                 | TP33          | F-H, S-Q               | Category A               | SGG7  | Colourless solid. Soluble in water. Melting point: 36°C. Mixtures with combustible material are readily ignited and may burn fiercely. Solutions in water are slightly corrosive. Harmful if swallowed.  | 1514   |
| –      | T3                                 | TP33          | F-H, S-Q               | Category D               | SGG7<br>SGG14<br>SG38<br>SG49<br>SG60         | Violet-brown or black crystals or powder. Soluble in water. Reacts vigorously with sulphuric acid and hydrogen peroxide. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. | 1515   |
| –      | T3                                 | TP33          | F-G, S-Q               | Category C<br>H1         | SGG7<br>SGG16<br>SG16<br>SG26<br>SG35<br>SG59 | White powder. Particularly if wetted with small quantities of water, a mixture with combustible material may ignite following impact or friction. When involved in a fire, or in contact with water or acids, decomposes, evolving oxygen.   | 1516   |
| –      | –                                  | –             | F-B, S-J               | Category D               | SG7<br>SG30                                   | Desensitized explosive. Highly explosive in the dry state or if insufficiently wetted. May react violently in contact with heavy metals or their salts.  | 1517   |
| –      | T20                                | TP2<br>TP13   | F-A, S-A               | Category D<br>SW1<br>SW2 | SGG6<br>SG35<br>SG36                          | Colourless to amber liquid evolving toxic vapour. Miscible with water. Unstable in contact with acids and alkalis, evolving hydrogen cyanide, a highly toxic and flammable gas. Highly toxic if swallowed, by skin contact or by inhalation.   | 1541   |
| –      | T6                                 | TP33          | F-A, S-A               | Category A               | –   | A wide range of toxic solids, generally of vegetable origin. Toxic if swallowed, by skin contact or by inhalation.   | 1544   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A               | –   | See entry above.   | 1544   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A               | –   | See entry above.   | 1544   |

Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. May explode if involved in a fire. Toxic if swallowed, by skin contact or by dust inhalation. Should be sufficiently phlegmatized (mercury oxycyanide-mercury cyanide mixtures containing not less than 65% by mass of mercury cyanide can be regarded as adequately phlegmatized). Transport of MERCURY OXYCYANIDE pure is prohibited. | 1642   |

| –      | T7                                 | TP2           | F-A, S-A               | Category A              | –                | See entry above.  | 1658   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A              | –                | White crystals. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation.  | 1659   |
| –      | –                                  | –             | F-C, S-W               | Category D<br>SW2       | SG6<br>SG19      | Non-flammable, toxic and corrosive gas. Strong oxidizing agent. On contact with air, gives off brown fumes which are toxic by inhalation, with delayed effect similar to phosgene. Heavier than air (1.04). Highly irritating to skin, eyes and mucous membranes.                             | 1660   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A              | –                | Yellow crystals. Toxic if swallowed, by skin contact or by dust inhalation. <i>ortho</i> -NITROANILINES may be carried in the molten state.   | 1661   |
| –      | T7                                 | TP2           | F-A, S-A               | Category A<br>SW2       | –                | Oily liquid, evolving toxic vapour. Melting point: approximately 6°C. Toxic if swallowed, by skin contact or by inhalation.   | 1662   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A              | –                | Yellow crystals. Some isomers may have a melting point as low as 44°C. Toxic if swallowed, by skin contact or by dust inhalation. May be carried in the molten state.   | 1663   |
| –      | T7                                 | TP2           | F-A, S-A               | Category A              | –                | Yellow liquids. Melting points: <i>ortho</i> -NITROTOLUENE: –4°C, <i>meta</i> -NITROTOLUENE: 15°C. Toxic if swallowed, by skin contact or by inhalation.  | 1664   |
| –      | T7                                 | TP2           | F-A, S-A               | Category A              | –                | Yellow liquids. Melting points: 2-NITRO-3-XYLENE: 14°C to 16°C, 3-NITRO-2-XYLENE: 7°C to 9°C, 4-NITRO-3-XYLENE: 2°C. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation.   | 1665   |
| –      | T7                                 | TP2           | F-A, S-A               | Category A<br>SW2       | SGG10            | Colourless liquid. Toxic if swallowed, by skin contact or by inhalation.  | 1669   |
| –      | T20                                | TP2<br>TP13   | F-A, S-A               | Category D<br>SW2       | –                | Yellow, oily, volatile liquid evolving irritating vapour ("Tear Gas"). Slowly decomposes in contact with water, producing hydrochloric acid. Reacts with iron or steel, evolving carbon tetrachloride. Corrosive to most metals. Highly toxic if swallowed, by skin contact or by inhalation. | 1670   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A              | –                | Colourless or white crystals or crystallized mass. Melting point: 43°C (pure product). Soluble in water. Toxic if swallowed, by skin contact or by vapour inhalation. Rapidly absorbed through the skin.  | 1671   |
| –      | T14                                | TP2<br>TP13   | F-A, S-A               | Category D<br>SW2       | –                | Pale yellow, oily liquid with an irritating unpleasant odour. Highly toxic if swallowed, by skin contact or by inhalation.  | 1672   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A              | –                | White crystals or powder. Toxic if swallowed, by skin contact or by dust inhalation. May be carried in the molten state.  | 1673   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A              | SGG7             | Toxic if swallowed, by skin contact or by dust inhalation.  | 1674   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A              | –                | Colourless crystals or white powder. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation.   | 1677   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A              | –                | White powder. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation.  | 1678   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A              | SGG6<br>SG35     | White crystals or powder. Soluble in water. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by dust inhalation.  | 1679   |
| –      | T6                                 | TP33          | F-A, S-A               | Category B              | SGG6<br>SG35     | White, deliquescent crystals or lumps. Soluble in water. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Highly toxic if swallowed, by skin contact or by dust inhalation.  | 1680   |

Part 3 – Dangerous Goods List, special provisions and exceptions

Chapter 3.2 – Dangerous Goods List

Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by dust inhalation.   | 1684   |
| -      | T3                                 | TP33          | F-A, S-A               | Category A                     | -                             | Colourless crystals. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation.  | 1685   |
| -      | T7                                 | TP2           | F-A, S-A               | Category A                     | -                             | Colourless. Toxic if swallowed, by skin contact or by inhalation.  | 1686   |
| -      | T4                                 | TP2           | F-A, S-A               | Category A                     | -                             | See entry above.   | 1686   |
| -      | -                                  | -             | F-A, S-A               | Category A                     | SGG17<br>SG15<br>SG30<br>SG35 | Colourless crystals. May react vigorously with acids to form hydrazoic acid, which is an explosive. May form extremely sensitive compounds with heavy metals or their salts. May explode if involved in a fire. Toxic if swallowed, by skin contact or by dust inhalation. | 1687   |
| -      | T3                                 | TP33          | F-A, S-A               | Category A                     | SG35                          | White, deliquescent solid with a foul odour. Reacts with acids, evolving dimethylarsine, an extremely toxic gas. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation.  | 1688   |
| -      | T6                                 | TP33          | F-A, S-A               | Category B                     | SGG6<br>SG35                  | White, deliquescent crystals or lumps. Soluble in water. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Highly toxic if swallowed, by skin contact or by dust inhalation.   | 1689   |
| -      | T1                                 | TP33          | F-A, S-A               | Category A                     | SG35                          | White crystals or powder. React with acids, evolving hydrogen fluoride, a toxic, irritating and corrosive gas, apparent as white fumes. Toxic if swallowed, by skin contact or by inhalation.  | 1690   |
| -      | T3                                 | TP33          | F-A, S-A               | Category A                     | -                             | White powder. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation.   | 1691   |
| -      | T6                                 | TP33          | F-A, S-A               | Category A                     | -                             | White crystals or powder. Strychnine is slightly soluble; the salts are soluble in water. Highly toxic if swallowed, by skin contact or by dust inhalation.  | 1692   |
| -      | -                                  | -             | F-A, S-A               | Category D<br>SW2              | -                             | "Tear gas substance" is a generic term for substances which, in minute quantities dispersed in air, cause extreme eye irritation and profuse tears. Toxic if swallowed, by skin contact or by inhalation.  | 1693   |
| -      | -                                  | -             | F-A, S-A               | Category D<br>SW2              | -                             | See entry above.   | 1693   |

| –      | T4                                 | TP1           | F-A, S-A               | Category A<br>SW2              | SGG10                              | Colourless liquid with a chloroform-like odour. When involved in a fire, evolves extremely toxic fumes (phosgene). Toxic if swallowed, by skin contact or by inhalation.   | 1710   |
| –      | T7                                 | TP2           | F-A, S-A               | Category A                     | –                                  | Toxic if swallowed, by skin contact or by inhalation.  | 1711   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A                     | SGG7                               | Crystalline solid. Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation.  | 1712   |
| –      | T6                                 | TP33          | F-A, S-A               | Category A                     | SGG6<br>SGG7<br>SG35               | White crystals or powder. Insoluble in water. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Highly toxic if swallowed, by skin contact or by dust inhalation.  | 1713   |
| –      | –                                  | –             | F-G, S-N               | Category E<br>SW2<br>SW5<br>H1 | SGG7<br>SG26<br>SG35               | Grey crystals or powder. Reacts with acids or decomposes slowly in contact with water or damp air, evolving phosphine, a spontaneously flammable and highly toxic gas. Reacts violently with oxidizing substances.   | 1714   |
| –      | T7                                 | TP2           | F-E, S-C               | Category A<br>SW2              | SGG1<br>SG36<br>SG49               | Colourless, flammable liquid with an irritating odour. Flashpoint: 54°C c.c. Immiscible with water. In the presence of moisture, corrosive to most metals. Vapour irritates mucous membranes.  | 1715   |
| –      | T8                                 | TP2           | F-A, S-B               | Category C<br>SW2              | SGG1<br>SG36<br>SG49               | Colourless liquid. Reacts violently with water, evolving hydrogen bromide, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Vapour irritates mucous membranes.   | 1716   |
| –      | T8                                 | TP2           | F-E, S-C               | Category B<br>SW2              | SGG1<br>SG36<br>SG49               | Colourless liquid. Flashpoint: 5°C c.c. Boiling point: 51°C. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.                    | 1717   |
| –      | T4                                 | TP1           | F-A, S-B               | Category A                     | SGG1<br>SG36<br>SG49               | Yellow liquid. Insoluble in water. Mildly corrosive to most metals.  | 1718   |
| –      | T11                                | TP2<br>TP27   | F-A, S-B               | Category A                     | SGG18<br>SG22<br>SG35              | Corrosive to aluminium, zinc and tin. Reacts violently with acids. Reacts with ammonium salts, evolving ammonia gas. Causes burns to skin, eyes and mucous membranes.  | 1719   |
| –      | T7                                 | TP1<br>TP28   | F-A, S-B               | Category A                     | SGG18<br>SG22<br>SG35              | See entry above.   | 1719   |
| –      | T14                                | TP2<br>TP13   | F-E, S-C               | Category D<br>SW2              | SGG1<br>SG5<br>SG8<br>SG36<br>SG49 | Colourless, flammable liquid, extremely irritating odour, causes tears. Flashpoint: 31°C c.c. When involved in a fire, evolves toxic gases. In the presence of moisture, corrosive to most metals. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | 1722   |

Part 3 – Dangerous Goods List, special provisions and exceptions

Chapter 3.2 – Dangerous Goods List

Forms corrosive vapours in moist air. Reacts violently with water, evolving heat and hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Highly irritating to skin, eyes and mucous membranes. The solid hydrated form of this substance is not subject to the provisions of this Code.   | 1726   |
| –      | T3                                 | TP33               | F-A, S-B               | Category A<br>SW1<br>SW2 | SGG1<br>SGG2<br>SG35<br>SG36<br>SG49               | White deliquescent crystals. Decomposed by heat or acids, evolving hydrogen fluoride, a toxic, extremely irritating and corrosive gas, apparent as white fumes. In the presence of moisture, highly corrosive to glass, other siliceous materials and most metals. Causes burns to skin and mucous membranes.  | 1727   |
| –      | T10                                | TP2<br>TP7<br>TP13 | F-A, S-B               | Category C<br>SW2        | SGG1<br>SG36<br>SG49                               | Colourless liquid with a pungent odour. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. When involved in a fire, evolves toxic gases. In the presence of moisture, highly corrosive to most metals. Vapour irritates mucous membranes.   | 1728   |
| –      | T3                                 | TP33               | F-A, S-B               | Category C<br>SW2        | SGG1<br>SG36<br>SG49                               | Crystalline powder. Melting point: 22°C. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Vapour irritates mucous membranes.  | 1729   |
| –      | T7                                 | TP2                | F-A, S-B               | Category C<br>SW2        | SGG1<br>SG36<br>SG49                               | Yellow, oily liquid with an offensive odour. May solidify by absorption of moisture. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.  | 1730   |
| –      | T7                                 | TP2                | F-A, S-B               | Category C<br>SW2        | SGG1<br>SG36<br>SG49                               | Yellow liquid with an offensive odour. Corrosive to most metals. Causes burns to skin, eyes and mucous membranes.  | 1731   |
| –      | T4                                 | TP1                | F-A, S-B               | Category C<br>SW2        | SGG1<br>SG36<br>SG49                               | See entry above.   | 1731   |
| –      | T7                                 | TP2                | F-A, S-B               | Category D<br>SW2        | SGG1<br>SG6<br>SG8<br>SG10<br>SG12<br>SG36<br>SG49 | Colourless liquid with a pungent odour. When anhydrous, mildly corrosive to glass, other siliceous materials and most metals. Reacts violently with water, evolving hydrogen fluoride, an irritating gas, highly corrosive to glass and other siliceous materials and most metals. Powerful oxidant, may cause fire in contact with readily flammable organic substances. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin and mucous membranes. | 1732   |
| –      | T3                                 | TP33               | F-A, S-B               | Category C<br>SW2        | SGG1<br>SG36<br>SG49                               | Reacts slowly with water, evolving hydrogen chloride, an irritating and corrosive gas. In the presence of moisture, corrosive to most metals.  | 1733   |

Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Vapour irritates mucous membranes.  | 1736   |
| –                    | T8                                 | TP2<br>TP13            | F-A, S-B                | Category D<br>SW2<br>H1        | SGG1<br>SGG10<br>SG36<br>SG49                       | Colourless liquid with a pungent odour, causes tears. In the presence of moisture, corrosive to most metals. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes.   | 1737   |
| –                    | T8                                 | TP2<br>TP13            | F-A, S-B                | Category D<br>SW2<br>H1        | SGG1<br>SGG10<br>SG36<br>SG49                       | Colourless liquid with a pungent odour. Causes tears. Immiscible with water, but hydrolyses slowly in contact with it. In the presence of moisture, corrosive to most metals. Toxic if swallowed, by skin contact or by vapour inhalation. Causes burns to skin, eyes and mucous membranes.   | 1738   |
| –                    | T10                                | TP2<br>TP13            | F-A, S-B                | Category D<br>SW2              | SGG1<br>SG36<br>SG49                                | Colourless liquid with an irritating odour. Reacts with water. When involved in a fire, evolves toxic gases. In the presence of moisture, highly corrosive to most metals. Causes severe burns to skin, eyes and mucous membranes.  | 1739   |
| –                    | T3                                 | TP33                   | F-A, S-B                | Category A<br>SW1<br>SW2       | SGG1<br>SG35<br>SG36<br>SG49                        | Crystalline solids. Decomposed by heat or acid, evolving hydrogen fluoride, an extremely irritating and corrosive gas. In the presence of moisture, corrosive to glass, other siliceous materials and most metals. Cause burns to skin, eyes and mucous membranes.  | 1740   |
| –                    | T1                                 | TP33                   | F-A, S-B                | Category A<br>SW1<br>SW2       | SGG1<br>SG35<br>SG36<br>SG49                        | See entry above.  | 1740   |
| –                    | –                                  | –                      | F-C, S-U                | Category D<br>SW1<br>SW2       | –   | Non-flammable, toxic and corrosive gas. Forms dense white corrosive fumes in moist air. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Much heavier than air (2.35). Highly irritating to skin, eyes and mucous membranes.   | 1741   |
| –                    | T8                                 | TP2                    | F-A, S-B                | Category A                     | SGG1<br>SG36<br>SG49                                | Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.   | 1742   |
| –                    | T8                                 | TP2                    | F-A, S-B                | Category A                     | SGG1<br>SG36<br>SG49                                | Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.   | 1743   |
| –                    | T22                                | TP2<br>TP10<br>TP13    | F-A, S-B                | Category D<br>SW1<br>SW2<br>H2 | SGG1<br>SG6<br>SG16<br>SG17<br>SG19<br>SG36<br>SG49 | Very dark brown, heavy liquid with an extremely irritating odour. Density: 3.1 (pure product). Boiling point: 59°C. Powerful oxidant; may cause fire in contact with organic materials such as wood, cotton or straw. Highly corrosive to most metals. Solutions have the same properties to a lesser degree, depending on concentration. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes.  | 1744   |
| –                    | T22                                | TP2<br>TP13            | F-A, S-B                | Category D<br>SW1<br>SW2       | SGG1<br>SG6<br>SG16<br>SG19<br>SG36<br>SG49         | Colourless, heavy liquid with an extremely irritating odour. Boiling point: 40°C. Powerful oxidant; may cause fire in contact with organic material such as wood, cotton or straw. Reacts violently with water, evolving hydrogen fluoride, a toxic, extremely corrosive gas apparent as white fumes. In contact with acids or acid fumes, evolves highly toxic fumes of bromine, fluorine and their compounds. Highly corrosive to most metals. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | 1745   |

Powerful oxidant; may cause fire in contact with organic material such as wood, cotton or straw. Reacts violently with water, evolving hydrogen fluoride, a toxic, extremely corrosive gas apparent as white fumes. In contact with acids or acid fumes, evolves highly toxic fumes of bromine, fluorine and their compounds. Highly corrosive to most metals. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes.  | 1746   |
| –      | T10                                | TP2<br>TP7<br>TP13 | F-E, S-C               | Category C<br>SW2         | SGG1<br>SG36<br>SG49                         | Colourless, flammable liquid with a pungent odour. Flashpoint: 52°C c.c. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. When involved in a fire, evolves toxic gases. In the presence of moisture, highly corrosive to most metals. Vapour irritates mucous membranes.   | 1747   |
| –      | –                                  | –                  | F-H, S-Q               | Category D<br>SW1<br>SW11 | SGG8<br>SG35<br>SG38<br>SG49<br>SG53<br>SG60 | White or yellowish solid (powder, granules or tablets) with chlorine-like odour. Soluble in water. May cause fire in contact with organic material or ammonium compounds. Substances are liable to exothermic decomposition at elevated temperatures. This condition may lead to fire or explosion. Decomposition can be initiated by heat or by impurities (e.g. powdered metals (iron, manganese, cobalt, magnesium) and their compounds). Liable to heat slowly. Reacts with acids, evolving chlorine, an irritating, corrosive and toxic gas. In the presence of moisture, corrosive to most metals. Dust irritates mucous membranes. | 1748   |

Forms dense, white, corrosive fumes in moist air. Reacts violently with water, evolving hydrogen fluoride, an irritating and corrosive gas apparent as white fumes. Corrosive to glass and to most metals. Powerful oxidizing agent which may cause fires with combustible materials. Much heavier than air. Highly irritating to skin, eyes and mucous membranes.  | 1749   |
| –      | T7                                 | TP2                | F-A, S-B               | Category C<br>SW2         | SGG1<br>SG36<br>SG49                         | Colourless liquid. Corrosive to most metals. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes.   | 1750   |
| –      | T3                                 | TP33               | F-A, S-B               | Category C<br>SW2         | SGG1<br>SG36<br>SG49                         | Colourless, very deliquescent crystals. Melting point may be as low as 50°C. In the presence of moisture, corrosive to most metals. Toxic if swallowed, by skin contact or by dust inhalation. Causes burns to skin, eyes and mucous membranes.   | 1751   |
| –      | T20                                | TP2<br>TP13        | F-A, S-B               | Category D<br>SW2         | SGG1<br>SG36<br>SG49                         | Colourless liquid, with extremely irritating odour, causing tears. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes.  | 1752   |
| –      | T10                                | TP2<br>TP7         | F-A, S-B               | Category C<br>SW2         | SGG1<br>SG36<br>SG49                         | Colourless liquid with a pungent odour. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. When involved in a fire, evolves toxic gases. In the presence of moisture, highly corrosive to most metals. Irritating to skin, eyes and mucous membranes.  | 1753   |
| –      | T20                                | TP2                | F-A, S-B               | Category C<br>SW2         | SGG1<br>SG36<br>SG49                         | Colourless liquid with a pungent odour. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Causes severe burns to skin, eyes and mucous membranes.   | 1754   |

Highly corrosive to glass, other siliceous materials and most metals. Toxic if swallowed, by skin contact or by inhalation. Both the liquid and its fumes cause severe burns to skin, eyes and mucous membranes.   | 1790   |

Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. When involved in a fire, evolves toxic gases. In the presence of moisture, highly corrosive to most metals. Vapour irritates mucous membranes.   | 1804   |
| –      | T4                                 | TP1                | F-A, S-B               | Category A               | SGG1<br>SG36<br>SG49                               | Miscible in water. Mildly corrosive to most metals.  | 1805   |
| –      | T3                                 | TP33               | F-A, S-B               | Category C<br>SW2        | SGG1<br>SG6<br>SG8<br>SG10<br>SG12<br>SG36<br>SG49 | Colourless, crystalline powder. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. Powerful oxidant; may cause fire in contact with organic materials such as wood, cotton or straw. In the presence of moisture, highly corrosive to most metals.  | 1806   |
| –      | T3                                 | TP33               | F-A, S-B               | Category A               | SGG1<br>SG36<br>SG49                               | Crystalline powder, very deliquescent. Reacts violently with water and organic materials such as wood, cotton or straw, generating heat. In the presence of moisture, mildly corrosive to most metals.   | 1807   |
| –      | T7                                 | TP2                | F-A, S-B               | Category C<br>SW2        | SGG1<br>SG36<br>SG49                               | Colourless liquid with a pungent odour. Reacts violently with water, evolving hydrogen bromide, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.  | 1808   |
| –      | T20                                | TP2<br>TP13        | F-A, S-B               | Category D<br>SW2        | SGG1<br>SG36<br>SG49                               | Colourless liquid with a pungent odour. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes.                                | 1809   |
| –      | T20                                | TP2<br>TP13        | F-A, S-B               | Category D<br>SW2        | SGG1<br>SG36<br>SG49                               | Colourless liquid with a pungent odour. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. Highly toxic if swallowed, by skin contact or by inhalation.                                | 1810   |
| –      | T3                                 | TP33               | F-A, S-B               | Category A<br>SW1<br>SW2 | SGG1<br>SG35<br>SG36<br>SG49                       | White crystalline solid. Decomposed by heat or acids, evolving hydrogen fluoride, a toxic, extremely irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to glass, other siliceous materials and most metals. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | 1811   |
| –      | T1                                 | TP33               | F-A, S-A               | Category A               | SG35   | White, deliquescent crystals or powder. Decomposed by acids, evolving hydrogen fluoride, an irritating and corrosive gas. Toxic if swallowed, by skin contact or by inhalation.  | 1812   |
| –      | T3                                 | TP33               | F-A, S-B               | Category A               | SGG18<br>SG35                                      | White pellets, flakes, lumps or solid blocks, deliquescent. Reacts with ammonium salts, evolving ammonia gas. In the presence of moisture, corrosive to aluminium, zinc and tin. Causes burns to skin, eyes and mucous membranes. Reacts violently with acids.   | 1813   |
| –      | T7                                 | TP2                | F-A, S-B               | Category A               | SGG18<br>SG35                                      | Colourless liquid. Reacts with ammonium salts, evolving ammonia gas. Corrosive to aluminium, zinc and tin. Causes burns to skin, eyes and mucous membranes. Reacts violently with acids.   | 1814   |
| –      | T4                                 | TP1                | F-A, S-B               | Category A               | SGG18<br>SG35                                      | See entry above.   | 1814   |
| –      | T7                                 | TP1                | F-E, S-C               | Category B<br>SW2        | SGG1<br>SG36<br>SG49                               | Colourless liquid. Flashpoint: 12°C c.c. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas, apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.   | 1815   |

Boiling point: 69°C. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Causes severe burns to skin, eyes and mucous membranes. Highly toxic if swallowed, by skin contact or by inhalation.         | 1834   |
| –      | T7                                 | TP2           | F-A, S-B               | Category A                | SGG2<br>SGG18<br>SG35                | Colourless liquid with a strong ammonia-like odour that is miscible with water. Corrosive to metal. When heated emits toxic fumes of nitrogen oxides and ammonia. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes, and mucous membranes. Reacts violently with acids.   | 1835 △ |
| –      | T7                                 | TP2           | F-A, S-B               | Category A                | SGG2<br>SGG18<br>SG35                | See entry above.  | 1835 △ |
| –      | T10                                | TP2<br>TP13   | F-A, S-B               | Category C<br>SW2         | SGG1<br>SG36<br>SG49                 | Yellow or red liquid. Boiling point: 79°C. Reacts violently with water, evolving hydrogen chloride and sulphur dioxide, irritating and corrosive gases. In the presence of moisture, highly corrosive to most metals. Causes severe burns to skin, eyes and mucous membranes.   | 1836   |
| –      | T7                                 | TP2           | F-A, S-B               | Category C<br>SW2         | SGG1<br>SG36<br>SG49                 | Colourless liquid with a pungent odour. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Vapour irritates mucous membranes.  | 1837   |
| –      | T20                                | TP2<br>TP13   | F-A, S-B               | Category D<br>SW2         | SGG1<br>SGG7<br>SG36<br>SG49         | Colourless liquid. Reacts violently with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.   | 1838   |
| –      | T3                                 | TP33          | F-A, S-B               | Category A                | SGG1<br>SG36<br>SG49                 | Colourless, deliquescent crystals. Melting point of the pure substance: 58°C. In the presence of moisture, corrosive to most metals. Causes burns to skin, eyes and mucous membranes.   | 1839   |
| –      | T4                                 | TP2           | F-A, S-B               | Category A                | SGG1<br>SGG7<br>SG36<br>SG49         | Colourless liquid. Mildly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.  | 1840   |
| –      | T1                                 | TP33          | F-A, S-B               | Category A                | SG29                                 | White crystalline solid. Soluble in water. When heated, decomposes into ammonia and acetaldehyde.   | 1841   |
| –      | T3                                 | TP33          | F-A, S-A               | Category B                | SGG2<br>SG15<br>SG16<br>SG30<br>SG63 | May support combustion and burn without oxygen. When involved in a fire, evolves toxic fumes. Forms extremely sensitive explosive compounds with lead, silver or other heavy metals and their compounds. Toxic if swallowed, by skin contact or by inhalation.  | 1843   |

Vapours may form explosive mixture in air. Forms explosive and extremely sensitive mixtures with oxidizing substances. Toxic if swallowed, by skin contact or by dust inhalation.   | 1868   |
| –      | T1                                 | TP33               | F-G, S-G               | Category A<br>H1         | SG17<br>SG25<br>SG26<br>SG32<br>SG35<br>SG36<br>SG52 | Silvery white metal. Burns with an intense white light and heat. In contact with water, especially seawater, may evolve hydrogen, a flammable gas. Reacts readily with acids and caustic alkali, evolving hydrogen. Reacts readily with iron oxide, producing a thermite effect. Forms explosive mixtures with oxidizing substances.  | 1869   |
| –      | –                                  | –                  | F-G, S-O               | Category E<br>H1         | SG26<br>SG35   | White, crystalline powder. In contact with water, acids or moisture evolves hydrogen, which may be ignited by the heat of the reaction.   | 1870   |
| –      | T3                                 | TP33               | F-A, S-G               | Category E               | –  | Dark grey powder or crystals.   | 1871   |
| –      | T1                                 | TP33               | F-A, S-Q               | Category A               | SGG7<br>SGG9   | Brown powder or crystals. Insoluble in water. Harmful if swallowed.   | 1872   |
| –      | T10                                | TP1                | F-A, S-Q               | Category D               | SGG1<br>SG16<br>SG36<br>SG49                         | Colourless liquid. Mixtures with combustible material may ignite spontaneously and, when involved in a fire, by shock or by friction, may cause an explosion. Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. Transport of PERCHLORIC ACID with more than 72% acid, by mass, is prohibited.   | 1873   |
| –      | T1                                 | TP33               | F-A, S-A               | Category A               | –  | White solid. Evolves heat in contact with water. Toxic if swallowed, by skin contact or by dust inhalation.   | 1884   |
| –      | T3                                 | TP33               | F-A, S-A               | Category A               | –  | White, crystalline solid. Toxic if swallowed, by skin contact or by inhalation.   | 1885   |
| –      | T7                                 | TP2                | F-A, S-A               | Category D<br>SW2        | –  | Colourless liquid evolving vapour which is irritating to eyes and skin ("Tear Gas"). Toxic if swallowed, by skin contact or by inhalation.  | 1886   |
| –      | T4                                 | TP1                | F-A, S-A               | Category A               | SGG10  | Clear, colourless, volatile liquid with a chloroform-like odour. Immiscible with water. When involved in a fire, evolves extremely toxic fumes (phosgene). Toxic if swallowed, by skin contact or by inhalation.  | 1887   |
| –      | T7                                 | TP2                | F-A, S-A               | Category A<br>SW2        | SGG10  | Colourless, volatile liquid. Boiling point: 61°C. Non-flammable. When involved in a fire, evolves extremely toxic fumes (phosgene). Toxic if swallowed, by skin contact or by inhalation. Anaesthetic.  | 1888   |
| –      | T6                                 | TP33               | F-A, S-B               | Category D<br>SW2        | SGG6<br>SG35   | Colourless crystals evolving toxic vapour which is irritating and causes tears. Melting point: approximately 52°C. Boiling point: approximately 62°C. In contact with water evolves hydrogen bromide and hydrogen cyanide, which are highly toxic, flammable and corrosive gases. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | 1889   |

| –      | T2                                 | TP1                 | F-E, S-D               | Category A               | –                    | Colourless liquid. Flashpoint: 38°C to 44°C c.c. Explosive limits: 1.1% to 9.4%. Immiscible with water.  | 1915   |
| –      | T7                                 | TP2                 | F-E, S-D               | Category A               | –                    | Colourless flammable liquid. Flashpoint: 55°C c.c. Immiscible with water, but reacts with it, forming corrosive and toxic fumes. Toxic if swallowed, by skin contact or by inhalation.   | 1916   |
| –      | T4                                 | TP1<br>TP13         | F-E, S-D               | Category C<br>SW1<br>SW2 | –                    | Colourless liquid with a pungent odour. Flashpoint: 16°C c.c. Explosive limits: 1.8% to 14%. Immiscible with water. Irritating to skin, eyes and mucous membranes.   | 1917   |
| –      | T2                                 | TP1                 | F-E, S-E               | Category A               | –                    | Colourless liquid with a chloroform-like odour. Flashpoint: 31°C c.c. Explosive limits: 0.9% to 6.5%. Immiscible with water.   | 1918   |
| –      | T4                                 | TP1<br>TP13         | F-E, S-D               | Category C<br>SW1        | –                    | Colourless, volatile liquid with a pungent odour. Flashpoint: –3°C c.c. Explosive limits: 1.2% to 25%. Immiscible with water. Harmful by inhalation. Irritating to skin, eyes and mucous membranes.                              | 1919   |
| –      | T2                                 | TP2                 | F-E, S-E               | Category A               | –                    | Colourless liquids. Explosive limits: 0.8% to 2.9%. <i>normal</i> -NONANE: flashpoint 31°C c.c. Immiscible with water. Irritating to skin, eyes and mucous membranes.  | 1920   |
| –      | T14                                | TP2<br>TP13         | F-E, S-D               | Category D<br>SW1<br>SW2 | –                    | Colourless liquid with an ammoniacal odour. Flashpoint: –4°C o.c. Miscible with water. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin and eyes.  | 1921   |
| –      | T7                                 | TP1                 | F-E, S-C               | Category B<br>SW2        | SGG18<br>SG35        | Colourless to pale yellow liquid with an ammoniacal odour. Reacts violently with acids. Flashpoint: 3°C c.c. Miscible with water. Harmful by inhalation. Causes burns to skin, eyes and mucous membranes.                        | 1922   |
| –      | T3                                 | TP33                | F-A, S-J               | Category E<br>H1         | –                    | Liable to heat and ignite spontaneously in air and to evolve sulphur dioxide, an irritating gas.   | 1923   |
| –      | –                                  | –                   | F-G, S-L               | Category D<br>H1         | SG26                 | Colourless, yellowish liquid. Decomposes violently in contact with water. Spillage will ignite spontaneously.  | 1928   |
| –      | T3                                 | TP33                | F-A, S-J               | Category E<br>H1         | –                    | Liable to heat and ignite spontaneously in air and to evolve sulphur dioxide, an irritating gas.   | 1929   |
| –      | T1                                 | TP33                | F-A, S-J               | Category A<br>H1         | SGG7<br>SG11<br>SG20 | White, amorphous solid material. Soluble in water. Liable to heat on contact with moisture and heating results in evolution of sulphur dioxide, an intensely irritating gas. Also evolves sulphur dioxide on contact with acids. | 1931   |
| –      | T1                                 | TP33                | F-G, S-L               | Category D<br>H1         | SG26                 | Particle size larger than 840 microns. Readily flammable; may ignite spontaneously in air. In contact with water, may evolve hydrogen, a flammable gas.  | 1932   |
| –      | T14                                | TP2<br>TP13<br>TP27 | F-A, S-A               | Category B<br>SW2        | SGG6<br>SG35         | Liquid evolving toxic vapour. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by inhalation.  | 1935   |
| –      | T11                                | TP2<br>TP13<br>TP27 | F-A, S-A               | Category A<br>SW2        | SGG6<br>SG35         | See entry above.   | 1935   |
| –      | T7                                 | TP2<br>TP13<br>TP28 | F-A, S-A               | Category A<br>SW2        | SGG6<br>SG35         | See entry above.   | 1935   |
| –      | T7                                 | TP2                 | F-A, S-B               | Category A<br>SW2        | SGG1<br>SG36<br>SG49 | Corrosive to most metals. Harmful if swallowed. Causes burns to eyes and skin.   | 1938   |
| –      | T7                                 | TP2                 | F-A, S-B               | Category A<br>SW2        | SGG1<br>SG36<br>SG49 | See entry above.   | 1938   |

| –      | T3                                 | TP33          | F-A, S-B               | Category C<br>SW1<br>SW2<br>H2    | SGG1<br>SG36<br>SG49   | Colourless crystals. Melting point: 56°C. Reacts violently with water, evolving hydrogen bromide, a toxic and corrosive gas apparent as white fumes. Reacts violently with organic materials (such as wood, cotton, straw), causing fire. Decomposes when heated, evolving toxic and corrosive gases. When involved in a fire, evolves toxic and corrosive gases. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.                       | 1939   |
| –      | T7                                 | TP2           | F-A, S-B               | Category A                        | SGG1<br>SG36<br>SG49   | Colourless liquid with a strong, very unpleasant odour. Corrosive to most metals. Harmful if swallowed.  | 1940   |
| –      | T11                                | TP2           | F-A, S-A               | Category A<br>SW1                 | –  | Colourless, heavy liquid. Boiling point: 24°C. Immiscible with water. When involved in a fire, may evolve toxic fumes. Toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes.  | 1941   |
| –      | T1<br>BK2<br>BK3                   | TP33          | F-H, S-Q               | Category C<br>SW1<br>SW14<br>SW23 | SGG2<br>SG16<br>SG42<br>SG45<br>SG47<br>SG48<br>SG51<br>SG56<br>SG58<br>SG59<br>SG61 | Crystals, granules or prills. Soluble in water. Supporter of combustion. A major fire aboard a ship carrying this substance may involve a risk of explosion in the event of contamination (e.g. by fuel oil) or strong confinement. An adjacent detonation may also involve the risk of explosion. If heated strongly, decomposes, giving off toxic gases and gases which support combustion. Transport of AMMONIUM NITRATE liable to self-heating sufficient to initiate decomposition is prohibited. | 1942   |
| –      | –                                  | –             | F-A, S-I               | Category A                        | –  | Intended to be ignited on a specially prepared surface.  | 1944   |

Wholly or partly soluble in water. Supporters of combustion. A major fire aboard a ship carrying these substances may involve a risk of explosion in the event of contamination (e.g. by fuel oil) or strong confinement. An adjacent detonation may also involve a risk of explosion. If heated strongly, decompose, giving off toxic gases and gases which support combustion. Transport of AMMONIUM NITRATE liable to self-heating sufficient to initiate decomposition is prohibited. | 2067   |
| –      | BK2                                | –             | F-H, S-Q               | Category A<br>SW26                | SGG2   | Usually granules. Wholly or partly soluble in water. These mixtures may be subject to self-sustaining decomposition if heated. The temperature in such a reaction can reach 500°C. Decomposition, once initiated, may spread throughout the remainder, producing gases which are toxic. None of these mixtures is subject to the explosion hazard. Transport of AMMONIUM NITRATE liable to self-heating sufficient to initiate decomposition is prohibited.   | 2071   |
| –      | –                                  | –             | F-C, S-U               | Category E<br>SW2                 | SGG2<br>SGG18<br>SG35<br>SG46  | Solution in water of non-flammable gas with a pungent odour. Reacts violently with acids. Extremely dangerous to the eyes.  | 2073   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A<br>SW1<br>H2           | –  | Crystals or powder. Soluble in water. May polymerise violently on melting. Toxic if swallowed, by skin contact or by inhalation.  | 2074   |
| –      | T7                                 | TP2           | F-A, S-A               | Category D<br>SW2                 | –  | Colourless, mobile liquid, evolving toxic vapours which are considerably heavier than air. Toxic if swallowed, by skin contact or by inhalation.  | 2075   |
| –      | T7                                 | TP2           | F-A, S-B               | Category B                        | –  | Colourless to light yellow liquids. Miscible with water. Melting point of meta-CRESOL: 12°C. Toxic if swallowed, by skin contact or by inhalation. Cause burns to skin, eyes and mucous membranes.  | 2076   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A                        | –  | White crystals. Toxic if swallowed, by skin contact or by inhalation.   | 2077   |
| –      | T7                                 | TP2<br>TP13   | F-A, S-A               | Category C<br>SW1<br>SW2          | –  | Colourless to pale yellow liquid with a pungent odour. Immiscible with water but reacts with it to form carbon dioxide. Melting point: 20°C (pure product). Toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes.  | 2078   |
| –      | T7                                 | TP2           | F-A, S-B               | Category A<br>SW2                 | SGG18<br>SG35  | Yellow hygroscopic liquid with ammoniacal odour. Soluble in water. Strongly alkaline, corrosive. Can form explosive mixtures with nitric acid. Reacts with oxidizing substances. Corrosive to copper and its alloys. Reacts violently with acids. Liquid and vapour can cause severe damage to skin and eyes.   | 2079   |
| –      | –                                  | –             | –                      | –                                 | –  | Transport is prohibited.  | 2186   |
| –      | T75                                | TP5           | F-C, S-V               | Category D                        | –  | Non-flammable, liquefied gas, colourless and odourless. Heavier than air (1.5). Cannot remain in the liquid state above 31°C.   | 2187   |
| –      | –                                  | –             | F-D, S-U               | Category D<br>SW2                 | –  | Flammable, toxic, colourless gas with a garlic odour. Explosive limits: 3.9% to 77.8%. Much heavier than air (2.8).   | 2188   |
| –      | –                                  | –             | F-D, S-U               | Category D<br>SW2                 | SG4<br>SG9<br>SG72   | Flammable, toxic and corrosive gas. Reacts with water, evolving hydrogen chloride. Highly irritating to skin, eyes and mucous membranes.  | 2189   |
| –      | –                                  | –             | F-C, S-W               | Category D<br>SW2<br>H1           | SG6<br>SG19  | Non-flammable, toxic and corrosive, colourless gas with a foul odour. Strong oxidizing agent. Reacts slowly with water or moist air to produce poisonous and corrosive fumes. Corrosive to glass and to most metals. Heavier than air (1.9). Highly irritating to skin, eyes and mucous membranes.  | 2190   |

| –      | –                                  | –               | F-C, S-U               | Category D SW2          | –                | Colourless, toxic and corrosive gas. Corrosive to glass and to most metals. Heavier than air. Highly irritating to skin, eyes and mucous membranes.  | 2194   |
| –      | –                                  | –               | F-C, S-U               | Category D SW2          | –                | Non-flammable, toxic and corrosive colourless gas with an unpleasant odour. Decomposes in water, evolving highly toxic and corrosive fumes. Corrosive to glass and to most metals. Much heavier than air (7.2). Highly irritating to skin, eyes and mucous membranes.  | 2195   |
| –      | –                                  | –               | F-C, S-U               | Category D SW2          | –                | Non-flammable, toxic and corrosive, colourless gas, or yellow liquid. Decomposes in water or moist air, evolving highly toxic and corrosive fumes. Corrosive to glass and to most metals. Much heavier than air (10.3). Boiling point: 19.5°C. Highly irritating to skin, eyes and mucous membranes.   | 2196   |
| –      | –                                  | –               | F-C, S-U               | Category D SW2          | –                | Non-flammable, toxic and corrosive colourless gas with a pungent odour. Highly corrosive in the presence of water. Much heavier than air (4.4). Highly irritating to skin, eyes and mucous membranes.  | 2197   |
| –      | –                                  | –               | F-C, S-U               | Category D SW2          | –                | Non-flammable, toxic and corrosive gas with an irritating odour. Reacts with water or moist air to produce toxic and corrosive fumes. Corrosive to glass and to most metals. Much heavier than air (4.3). Highly irritating to skin, eyes and mucous membranes.  | 2198   |
| –      | –                                  | –               | F-D, S-U               | Category D SW2          | –                | Flammable, toxic, colourless gas with a garlic odour. Ignites spontaneously in air. Heavier than air (1.2). Irritating to skin, eyes and mucous membranes.   | 2199   |
| –      | –                                  | –               | F-D, S-U               | Category B SW1 SW2      | –                | Liquefied, flammable, colourless gas. Explosive limits: 1.7% to 12%. Heavier than air (1.4). Boiling point: –34°C. Irritating to skin, eyes and mucous membranes.  | 2200   |
| –      | T75                                | TP5 TP22        | F-C, S-W               | Category D SW2          | –                | Liquefied, non-flammable, colourless gas with a slightly sweet odour. Strong oxidizing agent. Heavier than air (1.5). Cannot remain in liquid state above 36.5°C.  | 2201   |
| –      | –                                  | –               | F-D, S-U               | Category D SW2          | –                | Flammable, toxic, colourless gas with a disagreeable odour. Much heavier than air (2.8). Highly irritating to skin, eyes and mucous membranes.   | 2202   |
| –      | –                                  | –               | F-D, S-U               | Category E SW2          | SG43 SG46        | Flammable, colourless gas with a foul odour. Explosive limits: 1% to 100%. Ignites spontaneously in air. Strong reducing agent which reacts violently with oxidizing substances. Heavier than air (1.1).   | 2203   |
| –      | –                                  | –               | F-D, S-U               | Category D SW2          | –                | Flammable, toxic, colourless gas with a foul odour. Much heavier than air (2.1).   | 2204   |
| –      | T3                                 | TP1             | F-A, S-A               | Category A              | SGG6             | Colourless, odourless oil. Decomposes above 93°C, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by inhalation.   | 2205   |
| –      | T11                                | TP2 TP13 TP27   | F-A, S-A               | Category E SW1 SW2      | –                | Liquids with a pungent odour. Immiscible with water but react with it to form carbon dioxide. Toxic if swallowed, by skin contact or by inhalation. If under deck, with mechanical ventilation, six air changes per hour, except when carried in closed containers, when two air changes per hour are required. Irritating to skin, eyes and mucous membranes. | 2206   |

| –      | T7                                 | TP1<br>TP13<br>TP28 | F-A, S-A               | Category E<br>SW1<br>SW2  | –  | Liquids with a pungent odour. Immiscible with water but react with it to form carbon dioxide. Toxic if swallowed, by skin contact or by inhalation. If under deck, with mechanical ventilation, six air changes per hour, except when carried in closed containers, when two air changes per hour are required. Irritating to skin, eyes and mucous membranes.  | 2206   |
| –      | –                                  | –                   | F-H, S-Q               | Category D<br>SW1<br>SW11 | SGG8<br>SG35<br>SG38<br>SG49<br>SG53<br>SG60 | White or yellowish solid (powder, granules or tablets) with chlorine-like odour. Soluble in water. May cause fire in contact with organic material or ammonium compounds. Substances are liable to exothermic decomposition at elevated temperatures. This condition may lead to fire or explosion. Decomposition can be initiated by heat or by impurities (e.g. powdered metals (iron, manganese, cobalt, magnesium) and their compounds). Liable to heat slowly. Reacts with acids, evolving chlorine, an irritating, corrosive and toxic gas. In the presence of moisture, corrosive to most metals. Dust irritates mucous membranes.   | 2208   |
| –      | T4                                 | TP1                 | F-A, S-B               | Category A                | –  | Colourless, clear liquid, with a suffocating pungent odour. Usually stabilized with methyl alcohol. Miscible with water. Causes burns to skin, eyes and mucous membranes.   | 2209   |
| –      | T1                                 | TP33                | F-G, S-L               | Category A<br>H1          | SG26<br>SG29                                 | Yellow powder, liable to heat and to ignite spontaneously in air. May evolve toxic, irritating or flammable fumes when wet, when involved in a fire or in contact with acids. Used as fungicide.  | 2210   |
| –      | T1                                 | TP33                | F-A, S-I               | Category E<br>SW1<br>SW6  | SG5<br>SG14                                  | A moulding material in bead or granular form consisting predominantly of polystyrene, poly(methyl methacrylate) or other polymeric material and containing 5% to 8% of a volatile hydrocarbon which is predominantly pentane. During storage, a small proportion of this pentane is released to the atmosphere; this proportion increases at elevated temperatures.   | 2211   |
| –      | T3                                 | TP33                | F-A, S-A               | Category A<br>SW2<br>H4   | SG29   | Mineral fibres of varying length. Non-combustible. Inhalation of the dust of asbestos fibres is dangerous and therefore exposure should be avoided at all times. Always prevent the generation of asbestos dust. A safe level of airborne concentration of asbestos fibres may be obtained through effective packing. Cargo spaces or freight containers that have contained any type of raw asbestos should be carefully cleaned before discharging any remaining cargo, loading other cargo or carrying out repair or maintenance work. Whenever possible, cleaning of cargo spaces should be carried out whilst the ship is in a port where proper facilities and equipment, including proper respiratory apparatus and protective clothing, is available. Parts of the body that may have been exposed should be immediately and thoroughly washed. All waste material should be collected in impermeable and sealed bags for safe disposal ashore. If cleaning cannot be carried out at the discharge port, arrangements should be made in advance for cleaning to be carried out at the next port where necessary facilities are available. | 2212   |
| –      | T1<br>BK2<br>BK3                   | TP33                | F-A, S-G               | Category A<br>SW23        | –  | White powder with a pungent odour. Evolves formaldehyde, particularly when heated, which is irritating to eyes and mucous membranes.  | 2213   |
| –      | T1                                 | TP33                | F-A, S-B               | Category A                | SGG1<br>SG36<br>SG49                         | White powder or flakes and lumps containing a high proportion of dust. Melting point: 131°C. The vapour of the molten substance has a flashpoint of 152°C c.c. and forms a flammable atmosphere with explosive limits of 1.7% to 10.4%. Causes burns to skin, eyes and mucous membranes. May be carried in the molten state. The molten substance can cause severe skin burns.  | 2214   |
| –      | T1                                 | TP33                | F-A, S-B               | Category A                | SGG1<br>SG36<br>SG49<br>SG50<br>SG57         | White powder, needles, flakes, pellets, rods, briquettes, lumps or fused mass. Melting point: about 53°C. Fumes and dust are irritating to skin, eyes and mucous membranes. Inhalation can cause respiratory trouble.   | 2215   |

Fumes are irritating to skin, eyes and mucous membranes.  | 2215   |
| 2216   | T1<br>BK2                          | TP33            | F-A, S-J               | Category B<br>SW24       | SG18<br>SG65                         | Brown to greenish-brown product obtained through heating and drying of oily fish. Strong odour which may affect other cargo. Liable to heat spontaneously unless of low fat content or effectively anti-oxidant treated.   | 2216   |
| 2217   | BK2                                | –               | F-A, S-J               | Category A<br>SW4<br>H1  | –                                    | Residue remaining after oil has been extracted by a solvent process from oil-bearing seeds. Used mainly as an animal feed or fertilizer. The most common seed cakes include those derived from coconut (copra), cottonseed, groundnut (peanut), linseed, maize (hominy chop), niger seed, palm kernel, rape seed, rice bran, soya bean and sunflower seed and they may be shipped in the form of cake, flakes, pellets, meal, etc. May self-heat slowly if wet and ignite spontaneously. Before shipment, this cargo should be properly aged. The duration of ageing varies with the oil content. The seed cake should be substantially free from flammable solvent. Smoking and the use of naked lights should not be allowed during loading and unloading, and on entry to cargo spaces at any other time. | 2217   |
| 2218   | T7                                 | TP2             | F-E, S-C               | Category C<br>SW1<br>SW2 | SGG1<br>SG36<br>SG49                 | Colourless, flammable liquid with an acrid odour. Melting point: 13°C. Flashpoint: 54°C o.c. Miscible with water. May polymerize violently, which may cause fire and explosion, unless properly stabilized. Harmful if swallowed or by inhalation. Corrosive to skin, eyes and mucous membranes.   | 2218   |
| 2219   | T2                                 | TP1             | F-E, S-D               | Category A               | –                                    | Colourless liquid. Flashpoint: 48°C c.c. Miscible with water. Harmful by inhalation. Irritating to skin, eyes and mucous membranes.  | 2219   |
| 2222   | T2                                 | TP1             | F-E, S-D               | Category A               | –                                    | Colourless to yellow liquid. Flashpoint: 41°C c.c. Explosive limits: 0.3% to 6.3%. Immiscible with water. Irritating to skin, eyes and mucous membranes.   | 2222   |
| 2224   | T7                                 | TP2             | F-A, S-A               | Category A<br>SW2        | SG35                                 | Colourless liquid with an odour similar to oil of bitter almonds. Reacts with acids, evolving hydrogen cyanide, a highly toxic and flammable gas. Toxic if swallowed, by skin contact or by inhalation.  | 2224   |
| 2225   | T4                                 | TP1             | F-A, S-B               | Category A<br>SW2        | SGG1                                 | Colourless to slightly yellow liquid with a pungent odour. Melting point: 12°C. Immiscible with water. Decomposes slowly in water. Harmful if swallowed or by skin contact. Highly irritating to skin, eyes and mucous membranes.  | 2225   |
| 2226   | T7                                 | TP2             | F-A, S-B               | Category A<br>SW2        | SGG1<br>SG36<br>SG49                 | Colourless to slightly yellow or brown fuming liquid. Reacts with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. In the presence of moisture, corrosive to most metals. Harmful if swallowed, by skin contact or by inhalation. Burns skin and eyes. Vapour irritates eyes and mucous membranes.  | 2226   |
| 2227   | T2                                 | TP1             | F-E, S-D               | Category C<br>SW1        | –                                    | Colourless liquid. Flashpoint: 41°C c.c. Explosive limits: 2% to 8%. Immiscible with water. Irritating to skin, eyes and mucous membranes.   | 2227   |
| 2232   | T20                                | TP2<br>TP13     | F-A, S-A               | Category D<br>SW2        | –                                    | Clear colourless liquid with a pungent odour. Miscible with water. Highly toxic if swallowed, by skin contact or by inhalation.  | 2232   |
| 2233   | T1                                 | TP33            | F-A, S-A               | Category A               | –                                    | Crystalline solid. Melting point: 52°C. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation.   | 2233   |
| 2234   | T2                                 | TP1             | F-E, S-D               | Category A<br>SW2        | SGG10                                | Colourless liquids with an aromatic odour. Flashpoint: 36°C to 59°C c.c. On contact with moisture, can evolve hydrogen fluoride, which is a toxic and corrosive gas. Harmful by inhalation.  | 2234   |

| –      | T4                                 | TP1           | F-E, S-D               | Category E              | –                    | Colourless liquid with an aromatic odour. Immiscible with water. Slightly irritating to skin, eyes and mucous membranes.  | 2256   |
| –      | T9                                 | TP7<br>TP33   | F-G, S-N               | Category D<br>H1        | SG26<br>SG35         | Soft, silvery metal, solid or liquid. Floats on water. Reacts violently with moisture, water or acids, evolving hydrogen, which may be ignited by the heat of the reaction. Highly reactive, sometimes with explosive effect.   | 2257   |
| –      | T7                                 | TP2           | F-E, S-C               | Category A<br>SW2       | SG35                 | Colourless, flammable liquid with an ammoniacal odour. Flashpoint range: 33°C to 48°C c.c. Miscible with water. When involved in a fire, evolves toxic gases. Harmful by inhalation. Causes burns to skin and eyes. Irritating to mucous membranes.   | 2258   |
| –      | T7                                 | TP2           | F-A, S-B               | Category B<br>SW2       | SGG18<br>SG35        | Moderately viscous, yellow combustible liquid with an ammoniacal odour. Miscible with water. Strongly alkaline. Can form explosive mixtures with nitric acid. When involved in a fire, evolves toxic gases. Corrosive to copper and copper alloys. Reacts violently with acids. Liquid and vapours cause burns to skin, eyes and mucous membranes. Causes skin allergy. | 2259   |
| –      | T4                                 | TP1           | F-E, S-C               | Category A<br>SW2       | SG35                 | Colourless liquid. Flashpoint: 35°C c.c. Partially miscible with water. When involved in a fire, evolves toxic gases. Harmful by inhalation. Causes burns to skin and eyes. Irritating to mucous membranes.   | 2260   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A              | –                    | Crystals or needles. Toxic if swallowed, by skin contact or by inhalation.  | 2261   |
| –      | T7                                 | TP2           | F-A, S-B               | Category A<br>SW2       | SGG1<br>SG36<br>SG49 | Colourless to yellow liquid with a pungent odour. Immiscible with water. Reacts with water, evolving toxic and corrosive fumes. Causes tears. Causes burns to skin, eyes and mucous membranes.  | 2262   |
| –      | T4                                 | TP1           | F-E, S-D               | Category B              | –                    | Colourless liquids. Flashpoint: 5°C to 16°C c.c. Immiscible with water.   | 2263   |
| –      | T7                                 | TP2           | F-E, S-C               | Category A<br>SW2       | SG35                 | Colourless, flammable liquid. Flashpoint: 43°C c.c. Partially miscible with water. Causes burns to skin, eyes and mucous membranes.   | 2264   |
| –      | T2                                 | TP2           | F-E, S-D               | Category A              | –                    | Colourless liquid. Flashpoint: 58°C c.c. Explosive limits: 2.2% to 16%. Miscible with water. May react violently with oxidizing materials.  | 2265   |
| –      | T7                                 | TP2<br>TP13   | F-E, S-C               | Category B<br>SW2       | SG35                 | Colourless liquid with a fishy odour. Flashpoint: –11°C c.c. Miscible with water. Harmful by inhalation. Causes burns to skin, eyes and mucous membranes.   | 2266   |
| –      | T7                                 | TP2           | F-A, S-B               | Category B<br>SW1       | SGG1<br>SG36<br>SG49 | Colourless, combustible liquid with a pungent odour. Reacts slowly with water, evolving hydrogen chloride, a corrosive gas apparent as white fumes. May decompose above 60°C, evolving flammable gases. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes.  | 2267   |
| –      | T4                                 | TP2           | F-A, S-B               | Category A              | SG35                 | Colourless combustible liquid. Miscible with water. Harmful if swallowed or by inhalation. Corrosive to skin, eyes and mucous membranes.  | 2269   |
| –      | T7                                 | TP1           | F-E, S-C               | Category B<br>SW2       | SGG18<br>SG35        | Aqueous solution of a flammable gas with an ammonia-like odour. Explosive limits: 3.5% to 14%. ETHYLAMINE SOLUTION, concentration 50%: flashpoint –11°C c.c.; boiling point 56°C. Pure ETHYLAMINE: boiling point 17°C. Miscible with water. Harmful by inhalation. Causes burns to skin, eyes and mucous membranes. Reacts violently with acids.                        | 2270   |

May cause fire and explosion in contact with combustible material (e.g. wood, straw, cotton, oil, sugar, etc.), acids, and other class 5.1 substances and burn fiercely. Maximum allowable transport temperature of the solution 140°C. This temperature should be indicated on the transport unit. The acidity (pH) of the cargo when diluted with ten parts of water to one part of cargo, by mass, should be between 5.0 and 7.0. The concentration and temperature of the solution at the time of loading, its percentage of combustible materials and of chlorides, and the contents of free acid should be certified. | 2426   |

Ignites spontaneously in air. Toxic if swallowed, by skin contact or by inhalation. Shipped molten above its melting point.   | 2447   |
| –      | T1                                 | TP3                | F-A, S-H               | Category C               | SG17                                  | Melting point: 119°C. Molten sulphur may contain hydrogen sulphide, which is highly poisonous in low concentrations. When involved in a fire, evolves toxic, very irritating and suffocating gas. Forms explosive and extremely sensitive mixtures with oxidizing substances. Shipped molten above its melting point. | 2448   |
| –      | –                                  | –                  | F-C, S-W               | Category D<br>SW2        | –                                     | Non-flammable, non-toxic, colourless, odourless gas. Strong oxidizing agent; reacts violently with many substances, e.g. grease, oil, etc. Much heavier than air (2.4). May cause slight eye irritation.  | 2451   |
| –      | –                                  | –                  | F-D, S-U               | Category B<br>SW1<br>SW2 | –                                     | Liquefied, flammable, colourless gas with an odour similar to acetylene. Heavier than air (1.9). Boiling point: 8°C. Irritating to skin, eyes and mucous membranes.   | 2452   |
| –      | –                                  | –                  | F-D, S-U               | Category E<br>SW2        | –                                     | Liquefied, flammable, colourless gas. Explosive limits: 5% to 10%. Heavier than air (1.7). Boiling point: –37°C.  | 2453   |
| –      | –                                  | –                  | F-D, S-U               | Category E<br>SW2        | –                                     | Flammable, colourless gas. Heavier than air (1.2).  | 2454   |
| –      | –                                  | –                  | –                      | –                        | –                                     | Transport is prohibited.  | 2455   |
| –      | T11                                | TP2                | F-E, S-D               | Category E               | SGG10                                 | Colourless liquid. Flashpoint: below –18°C c.c. Explosive limits: 2.5% to 12%. Boiling point: 23°C. Immiscible with water. Harmful if swallowed or by inhalation. Irritating to skin, eyes and mucous membranes.  | 2456   |
| –      | T7                                 | TP1                | F-E, S-D               | Category E               | –                                     | Colourless liquid. Flashpoint: –29°C c.c. Explosive limits: 1.2% to 7%. Immiscible with water. Irritating to skin, eyes and mucous membranes. Narcotic in high concentrations.  | 2457   |
| –      | T4                                 | TP1                | F-E, S-D               | Category B               | –                                     | Colourless liquids.<br>1,3-HEXADIENE: flashpoint –3°C c.c.<br>1,4-HEXADIENE: flashpoint –25°C c.c.<br>1,5-HEXADIENE: flashpoint –27°C c.c.<br>2,4-HEXADIENE: flashpoint –7°C c.c.<br>Immiscible with water. | –      | T6                                 | TP33                | F-A, S-A               | Category B<br>SW2       | –                            | Pale yellow, crystalline, volatile solid with an irritating odour. Highly toxic if swallowed, by skin contact or by inhalation.   | 2471   |
| –      | T1                                 | TP33                | F-A, S-A               | Category A              | –                            | White, crystalline powder. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation.   | 2473   |
| –      | T20                                | TP2<br>TP13         | F-A, S-A               | Category D<br>SW2       | SG35                         | Red fuming liquid with a foul phosgene-like odour. Decomposes slowly in water. Reacts with acids, evolving toxic and corrosive fumes. Highly toxic if swallowed, by skin contact or by inhalation.  | 2474   |
| –      | T1                                 | TP33                | F-A, S-B               | Category A<br>SW2       | SGG1<br>SG36<br>SG49         | Pink, deliquescent crystals. Decomposes in water, evolving hydrogen chloride, a corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to most metals. Irritating to skin, eyes and mucous membranes.   | 2475   |
| –      | T20                                | TP2<br>TP13         | F-E, S-D               | Category D<br>SW2       | –                            | White crystals. Usually shipped as an oily liquid with a flashpoint below 60°C c.c. Melting point: 36°C (pure substance). Flashpoint: 32°C c.c. (pure substance). Insoluble in water. When involved in a fire, evolves toxic gases. Highly toxic if swallowed, by skin contact or by inhalation.  | 2477   |
| –      | T11                                | TP2<br>TP13<br>TP27 | F-E, S-D               | Category D<br>SW2       | –                            | Flammable toxic liquids with a pungent odour. Immiscible with water but react with it to form carbon dioxide. Toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes.  | 2478   |
| –      | T7                                 | TP1<br>TP13<br>TP28 | F-E, S-D               | Category A              | –                            | See entry above.  | 2478   |
| –      | T22                                | TP2<br>TP13         | F-E, S-D               | Category D<br>SW2       | SG35                         | Flammable liquid with a pungent odour. Flashpoint: –7°C c.c. (pure product). Boiling point: 38°C (pure product). Vapour heavier than air. Immiscible with water but reacts violently with it. In contact with water or acids, evolves highly toxic nitrous fumes. Highly toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes. | 2480   |
| –      | T20                                | TP2<br>TP13         | F-E, S-D               | Category D<br>SW2       | SG35                         | Liquid with a pungent odour. Flashpoint: –18°C to 0°C c.c. Boiling point: 60°C. Immiscible with water but reacts violently with it. On contact with water or acids, or when heated above boiling point, evolves highly toxic nitrous fumes. Highly toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes.                       | 2481   |
| –      | T20                                | TP2<br>TP13         | F-E, S-D               | Category D<br>SW2       | –                            | Flammable liquid with a pungent odour. Immiscible with water but reacts violently with it, evolving gases. Flashpoint: –18°C to 23°C c.c. Highly toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes.   | 2482   |
| –      | T20                                | TP2<br>TP13         | F-E, S-D               | Category D<br>SW2       | –                            | Liquid with a pungent odour. Flashpoint: –10°C to 0°C c.c. Immiscible with water but reacts violently with it, evolving gases. Highly toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes.  | 2483   |

Flashpoint: 51°C c.c. Immiscible with water. Reacts with water, evolving carbon dioxide. Highly toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes.  | 2487   |
| -      | T20                                | TP2 TP13      | F-E, S-D               | Category D SW2          | -                                 | Yellowish liquid with an irritating odour. Flashpoint: 53°C c.c. Immiscible with water. Reacts with water, evolving carbon dioxide. Highly toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes.  | 2488   |
| -      | T7                                 | TP2           | F-A, S-A               | Category B              | -                                 | Colourless liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation.  | 2490   |
| -      | T4                                 | TP1           | F-A, S-B               | Category A              | SGG18 SG35                        | Colourless. Miscible with water. Corrosive to copper, copper compounds, copper alloys and rubber. Reacts violently with acids. Liquid and vapour cause burns to skin, eyes and mucous membranes.   | 2491   |
| -      | T7                                 | TP1           | F-E, S-C               | Category B SW2          | -                                 | Yellowish liquid with an ammoniacal odour. Flashpoint: 18°C c.c. Miscible with water. Harmful by inhalation. Absorbed through the skin. Causes burns to skin, eyes and mucous membranes.   | 2493   |
| -      | -                                  | -             | F-A, S-Q               | Category D SW1 SW2      | SGG1 SG6 SG16 SG19 SG35 SG36 SG49 | Colourless, fuming liquid (density 3.75). Powerful oxidant; may cause fire in contact with organic material such as wood, cotton or straw. Reacts violently with water, evolving hydrogen fluoride, a toxic, extremely corrosive gas apparent as white fumes. In contact with acids or acid fumes, evolves highly toxic fumes of iodine, fluorine and their compounds. Highly corrosive to most metals. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | 2495   |
| -      | T4                                 | TP1           | F-A, S-B               | Category A              | SGG1 SG36 SG49                    | Colourless, combustible liquid with a pungent odour. Reacts with water, forming propionic acid. Corrosive to skin, eyes and mucous membranes.  | 2496   |
| -      | T2                                 | TP1           | F-E, S-D               | Category A              | -                                 | Colourless liquid. Flashpoint: 57°C o.c. Immiscible with water.  | 2498   |
| -      | T7                                 | TP2           | F-A, S-A               | Category A              | -                                 | Aqueous solution. Miscible with water. Toxic if swallowed, by skin contact or by inhalation.   | 2501   |
| -      | T4                                 | TP1           | F-A, S-A               | Category A              | -                                 | See entry above.   | 2501   |
| -      | T7                                 | TP2           | F-E, S-C               | Category C SW2          | SGG1 SG36 SG49                    | Liquid with a penetrating odour. Flashpoint: 23°C c.c. or above. Reacts with water, evolving hydrogen chloride, a corrosive gas apparent as white fumes. Corrosive to most metals. Causes burns to skin, eyes and mucous membranes.  | 2502   |
| -      | T1                                 | TP33          | F-A, S-B               | Category A              | SGG1 SG36 SG49                    | White, lustrous crystals. Reacts with water, evolving hydrogen chloride, a corrosive gas apparent as white fumes. In the presence of moisture, corrosive to most metals. Irritating to mucous membranes.   | 2503   |
| -      | T4                                 | TP1           | F-A, S-A               | Category A              | SGG10                             | Colourless to yellowish liquid with a camphor-like odour. Toxic if swallowed, by skin contact or by inhalation.  | 2504   |

Part 3 – Dangerous Goods List, special provisions and exceptions

| –      | T4                                 | TP1                 | F-E, S-C               | Category A               | –                     | Colourless liquid with a pungent odour. Flashpoint: 55°C c.c. Explosive limits: 2% to 9.2%. Miscible with water. Causes burns to skin and eyes. Irritating to skin, eyes and mucous membranes.   | 2529   |
| –      | T7                                 | TP2<br>TP18<br>TP30 | F-A, S-B               | Category C<br>SW1<br>SW2 | SGG1<br>SG36<br>SG49  | Colourless, combustible liquid with a specific odour. Miscible with water. Polymerizes readily above its melting point (15°C), thereby generating heat and possible risk of explosion; should therefore be properly stabilized. Cooling below melting point (15°C) followed by subsequent reheating can release uninhibited monomer that readily polymerizes. Decomposes when heated, evolving toxic gases. Causes burns to skin, eyes and mucous membranes. | 2531   |
| –      | T4                                 | TP1                 | F-A, S-A               | Category A               | –                     | Colourless liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation.  | 2533   |
| –      | –                                  | –                   | F-D, S-U               | Category D<br>SW2        | SG4<br>SG9            | Liquefied, flammable, toxic and corrosive colourless gas with a pungent odour. Reacts with water, evolving hydrogen chloride, an irritating and corrosive gas. Heavier than air. Boiling point: 9°C. Highly irritating to skin, eyes and mucous membranes.   | 2534   |
| –      | T7                                 | TP1                 | F-E, S-C               | Category B<br>SW2        | –                     | Colourless liquid with an ammonia-like odour. Particularly if wetted with small quantities of water, a mixture with combustible material may ignite, following impact or friction. When involved in a fire, or in contact with water or acids, decomposes, evolving oxygen. Highly irritating to skin, eyes and mucous membranes.   | 2547   |
| –      | –                                  | –             | F-C, S-W               | Category D<br>SW2       | SG6<br>SG19                           | Non-flammable, toxic and corrosive gas. Forms dense, white, corrosive fumes in moist air. Reacts violently with water, evolving hydrogen fluoride, a toxic, irritating and corrosive gas apparent as white fumes. Corrosive to glass and to most metals. Powerful oxidizing agent which may cause violent fires with combustible materials. Much heavier than air (4.5). Highly irritating to skin, eyes and mucous membranes.                                       | 2548   |

| –      | T4                                 | TP1<br>TP13   | F-E, S-D               | Category E              | SGG10                                 | Colourless to yellowish, volatile liquid with a penetrating odour. Flashpoint: –12°C c.c. Explosive limits: 2.3% to 9.3%. Immiscible with water. When involved in a fire, may evolve highly toxic phosgene gas. Harmful by inhalation. Irritating to skin, eyes and mucous membranes.  | 2554   |
| –      | –                                  | –             | F-B, S-J               | Category E              | SG7<br>SG30                           | Desensitized explosive. Nitrocellulose may be granular or in flakes, blocks or fibrous form. When involved in a fire, evolves toxic fumes; in closed compartments, these fumes may form an explosive mixture with air. May form extremely sensitive compounds with heavy metals or their salts.  | 2555   |
| –      | –                                  | –             | F-B, S-J               | Category D<br>SW1<br>H2 | SG7<br>SG30                           | Nitrocellulose may be granular or in flakes, blocks or fibrous form. In case of leakage, flammable vapours are evolved which, in closed compartments, may form explosive mixtures with air. When involved in a fire, evolves toxic fumes; in closed compartments, these fumes may form an explosive mixture with air. Highly explosive when dry. May form extremely sensitive compounds with heavy metals or their salts.  | 2556   |
| –      | –                                  | –             | F-B, S-J               | Category D              | SG7<br>SG30                           | Nitrocellulose may be in granular form or in flakes. This product may also contain added pigments. When involved in a fire, evolves toxic fumes; in closed compartments, these fumes may form an explosive mixture with air. Burns extremely rapidly with intense heat radiation. The formulation should be prepared so that it remains homogeneous and does not separate during transport. May form extremely sensitive compounds with heavy metals or their salts. | 2557   |

| –      | T8                                 | TP2<br>TP13<br>TP28 | F-A, S-B               | Category C<br>SW15      | SGG1<br>SG36<br>SG49 | Colourless oily liquids. React with water, evolving heat. Cause burns to skin, eyes and mucous membranes. Highly corrosive to metal.   | 2571   |
| –      | T7                                 | TP2                 | F-A, S-A               | Category A<br>SW2       | –                    | Pale yellow oily liquid. Melting point: 20°C. Slightly soluble in water. Toxic if swallowed, by skin contact or by inhalation.   | 2572   |
| –      | T3                                 | TP33                | F-H, S-Q               | Category A              | SGG4<br>SG38<br>SG49 | Colourless crystals. Slightly soluble in water. Reacts vigorously with sulphuric acid. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. Toxic if swallowed, by skin contact or by dust inhalation.  | 2573   |
| –      | T7                                 | TP2                 | F-A, S-A               | Category A              | –                    | Colourless liquid. A mixture of isomers. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation.  | 2574   |
| –      | T7                                 | TP3<br>TP13         | F-A, S-B               | Category C<br>SW2       | SGG1<br>SG36<br>SG49 | Colourless liquid with a pungent odour. Melting point: 56°C. Reacts violently with water, evolving hydrogen bromide, a toxic and corrosive gas apparent as white fumes. Reacts violently with organic materials (such as wood, cotton, straw), causing fire. When involved in a fire, evolves highly toxic and corrosive gases. In the presence of moisture, highly corrosive to most metals. Vapours and liquid cause burns to skin, eyes and mucous membranes. Shipped molten above its melting point. | 2576   |
| –      | T7                                 | TP2                 | F-A, S-B               | Category C<br>SW2       | SGG1<br>SG36<br>SG49 | Colourless liquid with a pungent odour. Reacts with water, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. When involved in a fire, evolves highly toxic fumes. Corrosive to most metals. Vapour irritates eyes and mucous membranes. Liquid is corrosive to skin, eyes and mucous membranes.   | 2577   |
| –      | T1                                 | TP33                | F-A, S-B               | Category A<br>SW1<br>H2 | SGG1<br>SG36<br>SG49 | Colourless crystals or white deliquescent powder. Melting point: 23°C. Reacts with water, evolving heat and at normal temperatures phosphoric acid, but at higher temperatures phosphine, a highly toxic gas. In the presence of moisture, corrosive to most metals. Causes burns to skin, eyes and mucous membranes.  | 2578   |
| –      | T1                                 | TP33                | F-A, S-B               | Category A<br>SW1<br>H2 | SGG18<br>SG35        | Colourless, deliquescent crystals, turning dark on exposure to light. Soluble in water. Decomposes when heated and when involved in a fire, evolving highly toxic nitrous fumes. The solution in water is a strong base and is highly corrosive. Reacts violently with acids. Irritating to skin, eyes and mucous membranes.   | 2579   |
| –      | T4                                 | TP1                 | F-A, S-B               | Category A              | SGG1<br>SG36<br>SG49 | Colourless to yellowish liquid. Highly corrosive to most metals. Vapour highly irritating to skin, eyes and mucous membranes. Liquid causes severe burns to skin, eyes and mucous membranes.   | 2580   |
| –      | T4                                 | TP1                 | F-A, S-B               | Category A              | SGG1<br>SG36<br>SG49 | Colourless to yellowish liquid. Highly corrosive to most metals. Vapour highly irritating to skin, eyes and mucous membranes. Liquid causes severe burns to skin, eyes and mucous membranes.   | 2581   |
| –      | T4                                 | TP1                 | F-A, S-B               | Category A              | SGG1<br>SG36<br>SG49 | Colourless to light brown liquid. Highly corrosive to most metals.   | 2582   |
| –      | T3                                 | TP33                | F-A, S-B               | Category A              | SGG1<br>SG36<br>SG49 | When involved in a fire, evolve highly toxic gases. Corrosive to most metals, especially in the presence of moisture. Cause burns to skin, eyes and mucous membranes.  | 2583   |

| –      | T1                                 | TP33          | F-A, S-A               | Category A SW2 H4       | SG29             | Mineral fibres of varying length. Non-combustible. Inhalation of the dust of asbestos fibres is dangerous and therefore exposure should be avoided at all times. Always prevent the generation of asbestos dust. A safe level of airborne concentration of asbestos fibres may be obtained through effective packing. Cargo spaces or freight containers that have contained any type of raw asbestos should be carefully cleaned before discharging any remaining cargo, loading other cargo or carrying out repair or maintenance work. Whenever possible, cleaning of cargo spaces should be carried out whilst the ship is in a port where proper facilities and equipment, including proper respiratory apparatus and protective clothing, are available. Parts of the body that may have been exposed should be immediately and thoroughly washed. All waste material should be collected in impermeable and sealed bags for safe disposal ashore. If cleaning cannot be carried out at the discharge port, arrangements should be made in advance for cleaning to be carried out at the next port where necessary facilities are available. | 2590   |

| –      | T2                                 | TP1           | F-E, S-D               | Category A                     | –                             | Yellow liquid with a pleasant odour. Flashpoint: 44°C to 52°C c.c. Miscible with water. Reacts vigorously with oxidizing substances. Irritating to skin, eyes and mucous membranes.  | 2621   |
| –      | T7                                 | TP1           | F-E, S-D               | Category A<br>SW2              | –                             | Colourless liquid with a pungent odour. Flashpoint: 31°C o.c. Miscible with water. Toxic by inhalation. Irritating to skin, eyes and mucous membranes.   | 2622   |
| –      | –                                  | –             | F-A, S-I               | Category A                     | SG35                          | A porous solid, e.g. cellular urea-formaldehyde resin, compacted wood shavings, etc., impregnated with flammable liquid, usually white spirit or kerosene, and designed to burn in a controlled manner. When heated, evolves flammable vapours.  | 2623   |
| –      | T3                                 | TP33          | F-G, S-O               | Category B<br>SW5<br>H1        | SG26                          | White powder or crystals. Reacts with water or steam, evolving hydrogen, a flammable gas. In contact with acids, evolves silane, a spontaneously flammable gas.  | 2624   |
| –      | –                                  | –             | F-A, S-Q               | Category D                     | SGG1<br>SG36<br>SG38<br>SG49  | Colourless liquid. May decompose, evolving chlorine and oxygen with toxic, corrosive and oxidizing effects. May form explosive mixtures with ammonium compounds, combustible material or powdered metals. Corrosive to most metals. Transport of CHLORIC ACID, AQUEOUS SOLUTION with more than 10% chloric acid is prohibited.                       | 2626   |
| –      | T3                                 | TP33          | F-A, S-Q               | Category A                     | SGG12<br>SG38<br>SG49<br>SG62 | Solids. Solid mixtures with combustible material are readily ignited and may burn fiercely. Solid mixtures with ammonium compounds or cyanides may explode. If heated, may decompose, giving off toxic nitrous fumes. Harmful if swallowed. Transport of AMMONIUM NITRITES and mixtures of an inorganic nitrite with an ammonium salt is prohibited. | 2627   |
| –      | T6                                 | TP33          | F-A, S-A               | Category E                     | –                             | Solid. Soluble in water. Highly toxic if swallowed, by skin contact or by dust inhalation.   | 2628   |
| –      | T6                                 | TP33          | F-A, S-A               | Category E                     | –                             | White powder. Soluble in water. Highly toxic if swallowed, by skin contact or by dust inhalation.  | 2629   |
| –      | T6                                 | TP33          | F-A, S-A               | Category E                     | –                             | A wide range of toxic solids. Generally soluble in water. Highly toxic if swallowed, by skin contact or by dust inhalation.  | 2630   |
| –      | T6                                 | TP33          | F-A, S-A               | Category E                     | SGG1<br>SG36<br>SG49          | Colourless crystals. Melting point: 33°C. Soluble in water. Highly toxic if swallowed, by skin contact or by dust inhalation.  | 2642   |
| –      | T7                                 | TP2           | F-A, S-A               | Category D<br>SW2              | –                             | Colourless to straw-coloured liquid. Slightly miscible with water. Causes tears. Toxic if swallowed, by skin contact or by inhalation.   | 2643   |
| –      | T20                                | TP2<br>TP13   | F-A, S-A               | Category D<br>SW1<br>SW2<br>H2 | SGG10                         | Colourless liquid. Boiling point: 42°C to 43°C. Slightly miscible with water. When heated, evolves toxic fumes. Highly toxic if swallowed, by skin contact or by inhalation. Has strong narcotic effects.  | 2644   |
| –      | T3                                 | TP33          | F-A, S-A               | Category B<br>SW2              | –                             | White crystals changing to a greenish colour under the influence of light. Melting point: 50°C. Insoluble in water. Causes tears. Toxic if swallowed, by skin contact or by inhalation.  | 2645   |
| –      | T20                                | TP2<br>TP13   | F-A, S-A               | Category D<br>SW2              | SGG10                         | Pale yellow liquid with a pungent odour. Immiscible with water. Causes tears. Highly toxic if swallowed, by skin contact or by inhalation.   | 2646   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A<br>SW1<br>H2        | –                             | Colourless crystals. Melting point: 32°C. Soluble in water. When heated, evolves highly toxic cyanogen fumes. Toxic if swallowed, by skin contact or by dust inhalation.   | 2647   |
| –      | –                                  | –             | F-A, S-A               | Category B<br>SW2              | –                             | Liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation. Causes tears.   | 2648   |
| –      | T3                                 | TP33          | F-A, S-A               | Category B<br>SW1<br>SW2<br>H2 | –                             | Crystals. Melting point: 45°C. Soluble in water. Decomposes when heated, evolving highly toxic fumes. Toxic if swallowed, by skin contact or by dust inhalation. Causes tears.   | 2649   |

May react vigorously with oxidizing substances. Decomposes when heated, evolving highly toxic fumes (oxides of nitrogen). Toxic if swallowed, by skin contact or by inhalation.  | 2650   |
| -      | T1                                 | TP33          | F-A, S-A               | Category A                     | -                    | Tan-coloured flakes or lumps. Slightly soluble in water. Decomposes when heated, evolving highly toxic fumes. Toxic if swallowed, by skin contact or by dust inhalation. May be carried in the molten state.  | 2651   |
| -      | T7                                 | TP2           | F-A, S-A               | Category B<br>SW1<br>SW2<br>H2 | -                    | Colourless crystals. Melting point: 24°C. Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation. Causes tears.  | 2653   |
| -      | T1                                 | TP33          | F-A, S-A               | Category A                     | SG35                 | Solids which react with acids, evolving hydrogen fluoride and silicon tetrafluoride, irritating and corrosive gases. Toxic if swallowed, by skin contact or by dust inhalation.   | 2655   |
| -      | T4                                 | TP1           | F-A, S-A               | Category A<br>SW1<br>H2        | -                    | Colourless liquid with a pungent odour. Immiscible with water. When heated, evolves highly toxic fumes (of oxides of nitrogen). Toxic if swallowed, by skin contact or by inhalation.   | 2656   |
| -      | T3                                 | TP33          | F-A, S-A               | Category A                     | -                    | Bright red-yellow crystals with a faint odour. Insoluble in water. Toxic if swallowed, by skin contact or by inhalation.  | 2657   |
| -      | T1                                 | TP33          | F-A, S-A               | Category A                     | -                    | White powder. Soluble in water. Toxic if swallowed, by skin contact or by dust inhalation.  | 2659   |
| -      | T1                                 | TP33          | F-A, S-A               | Category A                     | -                    | Yellow to orange-red crystalline solids. Insoluble in water. Toxic if swallowed, by skin contact or by dust inhalation.   | 2660   |
| -      | T4                                 | TP1           | F-A, S-A               | Category B<br>SW1<br>SW2<br>H2 | -                    | Colourless to yellowish liquid. Slightly miscible with water. When heated, evolves extremely toxic fumes (phosgene). Causes tears. Toxic if swallowed, by skin contact or by inhalation.  | 2661   |
| -      | T4                                 | TP1           | F-A, S-A               | Category A                     | SGG10                | Clear, colourless liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation.  | 2664   |
| -      | T4                                 | TP1           | F-A, S-A               | Category A                     | -                    | Colourless liquids. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation.  | 2667   |
| -      | T20                                | TP2<br>TP13   | F-A, S-A               | Category D<br>SW1<br>SW2<br>H2 | SG35                 | Colourless flammable liquid with a pungent odour. Flashpoint: 56°C c.c. Immiscible with water. Decomposes when heated, evolving highly toxic fumes of cyanides. Reacts with steam and acids, evolving toxic and flammable vapours. Highly toxic if swallowed, by skin contact or by inhalation. | 2668   |
| -      | T7                                 | TP2           | F-A, S-A               | Category A<br>SW1<br>H2        | -                    | Solutions with a phenol-like odour. Slightly miscible with water. Decompose when heated, evolving extremely toxic fumes (phosgene). Toxic if swallowed, by skin contact or by inhalation.   | 2669   |
| -      | T7                                 | TP2           | F-A, S-A               | Category A<br>SW1<br>H2        | -                    | See entry above.  | 2669   |
| -      | T3                                 | TP33          | F-A, S-B               | Category A<br>SW1<br>SW2<br>H2 | SGG1<br>SG36<br>SG49 | Colourless crystals with a pungent odour. Reacts with water, forming toxic and corrosive acids. Decomposes when heated, evolving toxic and corrosive gases. Causes burns to skin, eyes and mucous membranes.  | 2670   |
| -      | T3                                 | TP33          | F-A, S-A               | Category B<br>SW1<br>SW2<br>H2 | SGG18<br>SG35        | White powder or crystals. Melting points: 58°C to 64°C. Soluble in water. Reacts violently with acids. Toxic if swallowed, by skin contact or by dust inhalation.   | 2671   |
| -      | T7                                 | TP2           | F-A, S-B               | Category A<br>SW2<br>SW5       | SGG18<br>SG35        | Colourless liquid with a pungent odour. Corrosive to copper, nickel, zinc and tin and their alloys such as brass. Not significantly corrosive to iron and steel. Reacts violently with acids. Liquid and vapour cause burns to skin, eyes and mucous membranes.                                 | 2672   |

Reacts violently with water, evolving hydrogen bromide, an irritating and corrosive gas apparent as white fumes. Reacts violently with ammonia, bases and many other substances and may cause fire and explosion. Decomposes when heated, evolving corrosive and toxic gases. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | 2691   |
| 2692   | T20                                | TP2<br>TP13     | F-A, S-B               | Category C<br>SW1<br>H2        | SGG1<br>SG36<br>SG49         | Colourless fuming liquid. Reacts violently with water, evolving toxic and corrosive fumes. Decomposes when heated, evolving toxic fumes. In the presence of moisture, highly corrosive to most metals. Liquid and vapour cause severe burns to skin, eyes and mucous membranes.   | 2692   |
| 2693   | T7                                 | TP1<br>TP28     | F-A, S-B               | Category A<br>SW2              | SG35                         | Liquid with a pungent odour. Reacts with acids, evolving sulphur dioxide, a toxic gas. Causes burns to skin, eyes and mucous membranes.   | 2693   |
| 2698   | T1                                 | TP33            | F-A, S-B               | Category A                     | SGG1<br>SG36<br>SG49         | White crystalline powders. React with water, evolving heat and forming tetrahydrophthalic acid. Cause burns to skin, eyes and mucous membranes. When heated, evolve acrid fumes which are irritating to skin, eyes and mucous membranes.  | 2698   |
| 2699   | T10                                | TP2             | F-A, S-B               | Category B<br>SW1<br>SW2<br>H2 | SGG1<br>SG36<br>SG49         | Colourless, fuming, hygroscopic liquid with a pungent odour. Miscible with water. When heated to decomposition or in contact with acids, evolves toxic gases. In the presence of moisture, highly corrosive to most metals. Vapours are highly irritating to skin, eyes and mucous membranes. Liquid causes severe burns to skin, eyes and mucous membranes.  | 2699   |
| 2705   | T7                                 | TP2             | F-A, S-B               | Category B                     | SG20<br>SG21                 | Colourless liquid with a perceptible odour. May react in contact with acids and alkalis. Causes burns to skin, eyes and mucous membranes.   | 2705   |
| 2707   | T4                                 | TP1             | F-E, S-D               | Category B                     | –                            | Colourless liquids with a pungent odour. Partially miscible with water. React vigorously with oxidizing substances. Harmful by inhalation. Irritating to skin, eyes and mucous membranes.   | 2707   |
| 2707   | T2                                 | TP1             | F-E, S-D               | Category A                     | –                            | See entry above.  | 2707   |

| –      | T1                                 | TP33          | F-A, S-I               | Category A              | –                     | Colourless or white crystals, granules or easily broken masses with a penetrating, pungent and aromatic odour. Slightly soluble in water. When heated, evolves flammable and explosive vapours. Harmful if swallowed.   | 2717   |
| –      | T3                                 | TP33          | F-H, S-Q               | Category A              | SGG3<br>SG38<br>SG49  | White crystals or powder. Slightly soluble in water. Reacts vigorously with sulphuric acid. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. Toxic if swallowed, by skin contact or by dust inhalation.  | 2719   |
| –      | T1                                 | TP33          | F-A, S-Q               | Category A              | –                     | Purple crystals. Mixtures with combustible material are readily ignited and may burn fiercely. Solutions in water are slightly corrosive. Harmful if swallowed.   | 2720   |
| –      | T3                                 | TP33          | F-H, S-Q               | Category A              | SGG4<br>SG38<br>SG49  | Blue-green deliquescent crystals or powder. Soluble in water. Reacts vigorously with sulphuric acid. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion.  | 2721   |
| –      | T1                                 | TP33          | F-A, S-Q               | Category A              | –                     | Colourless deliquescent crystals. Soluble in water. Mixtures with combustible material are readily ignited and burn fiercely. Harmful if swallowed.   | 2722   |
| –      | T3                                 | TP33          | F-H, S-Q               | Category A              | SGG4<br>SG38<br>SG49  | White deliquescent crystals or powder. Soluble in water. Melting point: 35°C. Reacts vigorously with sulphuric acid. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. The cargoes should be protected from moisture prior to and after loading. If weather is inclement, hatches should be closed. | 2723   |
| –      | T1                                 | TP33          | F-A, S-Q               | Category A              | –                     | Pale pink deliquescent crystals. Soluble in water. Melting point between 26°C and 35°C. Mixtures with combustible material are readily ignited and may burn fiercely. Solutions in water are slightly corrosive. Harmful if swallowed.  | 2724   |
| –      | T1                                 | TP33          | F-A, S-Q               | Category A              | –                     | Green deliquescent crystals. Soluble in water. Melting point: 55°C. Mixtures with combustible material are readily ignited and may burn fiercely. Solutions in water are slightly corrosive. Harmful if swallowed.  | 2725   |
| –      | T1                                 | TP33          | F-A, S-Q               | Category A              | SGG12<br>SG38<br>SG49 | Reddish-yellow crystals. Decomposes if heated, giving off toxic nitrous fumes. Mixtures with combustible material are readily ignited and may burn fiercely. Mixtures with ammonium compounds or cyanides may explode. Harmful if swallowed.  | 2726   |
| –      | T3                                 | TP33          | F-A, S-Q               | Category A              | –                     | Colourless crystals. Soluble in water. Mixtures with combustible material are readily ignited and may burn fiercely. Toxic if swallowed, by skin contact or by dust inhalation.   | 2727   |
| –      | T1                                 | TP33          | F-A, S-Q               | Category A              | –                     | White crystals, flakes or powder. Soluble in water. Solutions in water are slightly corrosive. Harmful if swallowed.  | 2728   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A              | –                     | White needle-like crystals. Insoluble in water. Decomposes when heated, evolving highly toxic fumes. Toxic if swallowed, by skin contact or by dust inhalation.   | 2729   |
| –      | T4                                 | TP1           | F-A, S-A               | Category A              | –                     | Light reddish or amber liquid. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation.   | 2730   |
| –      | T4                                 | TP1           | F-A, S-A               | Category A              | –                     | Colourless to pale yellow liquids. Melting point of 1-BROMO-3-NITROBENZENE: 17°C. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation.  | 2732   |

| -      | T4                                 | TP1           | F-A, S-B               | Category A              | SGG1<br>SG36<br>SG49                         | Colourless liquid. Decomposes in water to form butyric acid.   | 2739   |
| -      | T20                                | TP2<br>TP13   | F-E, S-C               | Category B<br>SW2       | SGG1<br>SG8<br>SG36<br>SG49                  | Colourless flammable liquid. Flashpoint: 28°C c.c. Decomposed by water, generating propyl alcohol. Highly toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes.   | 2740   |
| -      | T3                                 | TP33          | F-H, S-Q               | Category B              | SGG8<br>SG35<br>SG38<br>SG49<br>SG53<br>SG60 | White powder with pungent odour. Reacts with acids, evolving chlorine, an irritating, corrosive and toxic gas. Reacts fiercely with cyanides when heated or by friction. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are sensitive to friction and are liable to ignite. When involved in a fire, may cause an explosion. Toxic if swallowed, by skin contact or by dust inhalation. Dust irritates mucous membranes. Contact with eyes will cause serious injury to the cornea (blindness) if not treated immediately by using copious amounts of water followed by medical attention. | 2741   |

Part 3 – Dangerous Goods List, special provisions and exceptions

Chapter 3.2 – Dangerous Goods List

React and decompose with water or heat, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. Toxic if swallowed, by skin contact or by inhalation. Cause burns to skin, eyes and mucous membranes.   | 2745   |
| –      | T7                                 | TP2<br>TP13   | F-A, S-B               | Category A<br>SW1<br>SW2<br>H1<br>H2 | SGG1<br>SG36<br>SG49               | A wide range of colourless to yellowish liquids. React and decompose with water or heat, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. Toxic if swallowed, by skin contact or by inhalation. Cause burns to skin, eyes and mucous membranes.   | 2746   |
| –      | T4                                 | TP1           | F-A, S-A               | Category A<br>SW1<br>H1<br>H2        | –                                  | Colourless to yellowish liquid. Reacts with water or decomposes if heated, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. Toxic if swallowed, by skin contact or by inhalation.   | 2747   |
| –      | T7                                 | TP2<br>TP13   | F-A, S-B               | Category A<br>SW1<br>SW2<br>H1<br>H2 | SGG1<br>SG36<br>SG49               | A wide range of colourless to yellowish liquids. React and decompose with water or heat, evolving hydrogen chloride, an irritating and corrosive gas apparent as white fumes. Toxic if swallowed, by skin contact or by inhalation. Cause burns to skin, eyes and mucous membranes.   | 2748   |
| –      | T14                                | TP2           | F-E, S-D               | Category D                           | –                                  | Colourless, volatile liquid. Flashpoint: below –18°C c.c. Boiling point: 27°C. Immiscible with water. Harmful if swallowed or by inhalation. Irritating to skin, eyes and mucous membranes.   | 2749   |
| –      | T7                                 | TP2           | F-A, S-A               | Category A<br>SW1<br>SW2<br>H2       | –                                  | Colourless, slightly viscous liquid with a chloroform-like odour. Immiscible with water. Decomposes when heated, evolving extremely toxic fumes (phosgene). Toxic if swallowed, by skin contact or by inhalation.   | 2750   |
| –      | T7                                 | TP2           | F-A, S-B               | Category D<br>SW1<br>SW2<br>H2       | SGG1<br>SG36<br>SG49               | Colourless liquid with a perceptible odour. Reacts slowly with water, forming hydrochloric acid. When involved in a fire, evolves toxic gases (hydrogen chloride and sulphur dioxide). Vapour highly irritating to eyes and mucous membranes. Liquid causes burns to skin, eyes and mucous membranes.   | 2751   |
| –      | T2                                 | TP1           | F-E, S-D               | Category A                           | –                                  | Immiscible with water. Flashpoint: 47°C c.c. Irritating to skin, eyes and mucous membranes.   | 2752   |
| –      | T7                                 | TP1           | F-A, S-A               | Category A                           | –                                  | Liquids with a strong odour. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation.   | 2753   |
| –      | T7                                 | TP2           | F-A, S-A               | Category A                           | –                                  | Colourless to light amber liquids. Immiscible with water. Toxic if swallowed, by skin contact or by inhalation.   | 2754   |
| –      | T6                                 | TP33          | F-A, S-A               | Category A<br>SW2                    | –                                  | Solid pesticides present a very wide range of toxic hazard. Toxic if swallowed, by skin contact or by inhalation.   | 2757   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A<br>SW2                    | –                                  | See entry above.  | 2757   |

| –      | BK2                                | –             | F-G, S-J               | Category A<br>H1        | SG26                  | These cargoes are liable to self-heating and to ignite spontaneously, particularly when in a finely divided form, wet or contaminated with such materials as unsaturated cutting oil, oily rags and other combustible matter. Self-heating or inadequate ventilation may cause dangerous depletion of oxygen in the stowage spaces. Excessive amounts of cast iron borings or organic materials may encourage heating. The swarf should be protected from moisture prior to and after loading. If, during loading, the weather is inclement, hatches should be closed or otherwise protected to keep the material dry. | 2793   |
| –      | –                                  | –             | F-A, S-B               | Category A<br>SW16      | SGG1<br>SG36<br>SG49  | Metal plates immersed in acid electrolyte in a glass, hard rubber or plastics receptacle. When electrically charged, may cause fire through short-circuiting of terminals. Acid electrolyte is corrosive to most metals. Causes burns to skin, eyes and mucous membranes. Used batteries being transported for disposal or reclamation should be carefully checked prior to shipment to ensure the integrity of each battery and its suitability for transport.  | 2794   |
| –      | –                                  | –             | F-A, S-B               | Category A<br>SW16      | SGG18<br>SG35         | Metal plates immersed in alkaline electrolyte in a glass, hard rubber or plastics receptacle. When electrically charged, may cause fire through short-circuiting of terminals. Alkaline electrolyte is corrosive to aluminium, zinc and tin. Reacts violently with acids. Causes burns to skin, eyes and mucous membranes. Used batteries being transported for disposal or reclamation should be carefully checked prior to shipment to ensure the integrity of each battery and its suitability for transport.   | 2795 △ |

Soluble in water. May cause fire in contact with organic material or ammonium compounds. Substances are liable to exothermic decomposition at elevated temperatures. This condition may lead to fire or explosion. Decomposition can be initiated by heat or by impurities (e.g. powdered metals (iron, manganese, cobalt, magnesium) and their compounds). Liable to heat slowly. Reacts with acids, evolving chlorine, an irritating, corrosive and toxic gas. In the presence of moisture, corrosive to most metals. Dust irritates mucous membranes. | 2880   |

The latter is the residue remaining after the oil has been extracted from the seeds. Castor beans contain a powerful allergen which, by inhalation of dust or by skin contact with crushed bean products, can give rise to severe irritation of the skin, eyes and mucous membranes in some persons. They are also toxic by ingestion. When handling these products, wear at least a dust mask and goggles. Avoid unnecessary skin contact. | 2969   |

When electrically charged, may cause fire through short-circuiting of terminals. Batteries need not be individually marked and labelled if the pallet bears the appropriate mark and label. Used batteries being transported for disposal or reclamation should be carefully checked prior to shipment to ensure the integrity of each battery and its suitability for transport. React violently with acids.  | 3028   |
| –      | T6                                 | TP33          | F-A, S-A               | Category E<br>SW2<br>SW5 | –                | Waxed pellets, adequately stabilized powder, tablets or crystals. Highly toxic if swallowed, by skin contact or by inhalation.  | 3048   |
| –      | T2                                 | TP1           | F-E, S-D               | Category A<br>SW2        | SG50<br>SG57     | Colourless liquid with a garlic-like odour. Flashpoint: 49°C c.c. Immiscible with water. Harmful by inhalation. Irritating to skin, eyes and mucous membranes.  | 3054   |
| –      | T4                                 | TP1           | F-A, S-B               | Category A               | SG35             | Colourless, slightly viscous liquid with a mild odour. Miscible with water. Harmful if swallowed or by inhalation. Corrosive to skin, eyes and mucous membranes.  | 3055   |
| –      | T2                                 | TP1           | F-E, S-D               | Category A               | –                | Colourless or pale yellow, oily liquid with a pungent odour. Flashpoint: 35°C to 45°C c.c. Explosive limits: 1.1% to 5.2%. Slightly soluble in water. Irritating to skin, eyes and mucous membranes.  | 3056   |
| –      | T50                                | TP21          | F-C, S-U               | Category D<br>SW2        | –                | Liquefied, non-flammable, toxic and corrosive gas. Reacts with water. Corrosive to glass and to most metals, including steel. Heavier than air (1.4 at 20°C). Highly irritating to skin, eyes and mucous membranes.   | 3057   |
| –      | –                                  | –             | F-E, S-D               | Category E               | –                | Immiscible with water. Ignites readily. When involved in a fire, evolves toxic nitrous fumes. Not explosive in this state but damage to, or leakage from, a package may allow solvent to evaporate and thus leave the nitroglycerin in an explosive state.  | △ 3064 |
| –      | T4                                 | TP1           | F-E, S-D               | Category A               | –                | Aqueous solutions of ethanol produced and supplied as alcoholic beverages. Miscible with water. Flashpoint: –13°C c.c. or greater.  | 3065   |
| –      | T2                                 | TP1           | F-E, S-D               | Category A               | –                | Alcoholic beverages containing more than 24% alcohol but not more than 70% by volume, when transported as part of the manufacturing process, may be transported in wooden barrels with a capacity of more than 250 L and not more than 500 L meeting the general requirements of 4.1.1, as appropriate, on the following conditions:<br>.1 the wooden barrels should be checked and tightened before filling;<br>.2 sufficient ullage (not less than 3%) should be left to allow for the expansion of the liquid;<br>.3 the wooden barrels should be transported with the bungholes pointing upwards;<br>.4 the wooden barrels should be transported in containers meeting the requirements of the <i>International Convention for Safe Containers, 1972</i> (CSC Convention), as amended. Each wooden barrel should be secured in custom-made cradles and should be wedged by appropriate means to prevent them from being displaced in any way during transport; and<br>.5 when carried on board ships, the containers should be stowed in open cargo spaces or in enclosed cargo spaces complying with the requirements for class 3 flammable liquids with a flashpoint of 23°C c.c. or less in regulation II-2/19 of SOLAS, 74, as amended. | 3065   |
| –      | T7                                 | TP2<br>TP28   | F-A, S-B               | Category B<br>SW2        | –                | Corrosive content. Causes burns to skin, eyes and mucous membranes.   | 3066   |

Critical ambient temperature of decomposition may be as low as 60°C. May cause fire in contact with organic material or ammonium compounds. React with acids, evolving chlorine, an irritating, corrosive and toxic gas. In the presence of moisture, corrosive to most metals. Dust irritates mucous membranes. Transport of ammonium hypochlorite and mixtures of a hypochlorite with an ammonium salt is <b>prohibited</b> .  | 3212   |

Burns vigorously. Insoluble in water. Contact with alkalis or acids may cause dangerous decomposition. The products of combustion or self-accelerating decomposition may be toxic by inhalation. Control and emergency temperatures for each formulation can be found in 2.4.2.3.2.3. The temperature must be checked regularly. | 3240   |
| –      | –                                  | –             | F-J, S-G               | Category C<br>SW1<br>SW2<br>H2<br>H3 | –                    | White crystals. Soluble in water. Decomposes when heated, evolving toxic gases. Sensitive to strong detonation shock. This substance shall be packed in accordance with packing method OP6 (see applicable packing instruction).  | 3241   |
| –      | T3                                 | TP33          | F-J, S-G               | Category D                           | SG17<br>SG35<br>SG36 | Yellow or orange powder. Insoluble in water. Heat may cause exothermic decomposition, producing carbon monoxide (a toxic and flammable gas) and nitrogen. May explode if involved in a fire under confined conditions. Addition of activators (e.g. zinc compounds) may result in a decrease of thermal stability and/or a change in explosive properties.  | 3242   |
| –      | T3<br>BK2                          | TP33          | F-A, S-A               | Category B<br>SW2                    | –                    | Mixtures of non-dangerous solids (such as soil, sand, production materials, etc.) and toxic liquids. Toxic if swallowed, by skin contact or by inhalation.  | 3243   |
| –      | T3<br>BK2                          | TP33          | F-A, S-B               | Category B<br>SW2                    | –                    | Mixtures of non-dangerous solids (such as soil, sand, production materials, etc.) and corrosive liquids. Cause burns to skin, eyes and mucous membranes.  | 3244   |
| –      | –                                  | –             | F-A, S-T               | SW7                                  | SG50                 | –   | 3245   |

Strong garlic odour (phosphine). Liable to heat and ignite spontaneously in air. If involved in a fire, evolves phosphine, a flammable and highly toxic gas. Reacts violently with oxidizing substances (peroxides, halogens, nitric oxides and carbon tetrachloride). Irritating to mucous membranes. | 3254   |
| –      | –                                  | –             | F-A, S-M               | Category D              | SGG8                 | Volatile flammable slightly yellow liquid with a pungent odour. Immiscible with water. Boiling point: 77°C to 79°C. Flashpoint between –15°C and –10°C. Exposure to light causes immediate dangerous decomposition. Causes burns to skin, eyes and mucous membranes.  | 3255   |

"Cold" batteries (batteries containing elemental sodium only in the solid state) are electrically inert. Batteries are activated by heating to between 300°C and 350°C before operating to produce electricity. Activated batteries (i.e. "hot" batteries containing liquid elemental sodium) may cause fire through short-circuit of the terminals. Batteries or cells should not be offered for transport at a temperature such that liquid elemental sodium is present in the battery or cell unless approved, and under conditions of transport established by the competent authority. | 3292   |

Even though this substance has a flammability hazard, it only exhibits such hazard under extreme fire conditions in confined areas. Reacts violently with acids. Highly irritating to skin, eyes and mucous membranes. Suffocating in low concentrations.  | 3318 |
| 3319   | –                                  | –               | –                      | F-B, S-J                | Category E                         | –                           | Desensitized explosive with lactose, glucose or cellulose. White solid. Soluble in water. When involved in a fire, the nitroglycerin may accumulate and may produce an explosion. Contact with water may dissolve the desensitizer (lactose or glucose), causing migration and accumulation of the nitroglycerin, which may explode. Nitroglycerin is more dense than water. When involved in a fire, evolves toxic fumes; in closed compartments these fumes may form an explosive mixture with air. Inhalation of vapours may cause headaches, dizziness and fainting. | 3319 |

On contact with moisture, evolves highly flammable vapours such as carbon disulphide (UN 1131, which has a flashpoint of –30°C c.c. and a very low ignition temperature of 100°C). When confined, can cause an explosion due to the wide explosive limits of the vapours. Finely divided dust forms explosive mixtures in air. Care should be taken when opening cargo transport units in case carbon disulphide vapours are present. | 3342   |

Chemical oxygen generators are used for the generation of oxygen for respiratory support, e.g. in aircraft, submarines, spacecraft, bomb shelters and breathing apparatus. Oxidizing salts such as chlorates and perchlorates of lithium, sodium and potassium, which are used in chemical oxygen generators, evolve oxygen when heated. These salts are mixed (compounded) with a fuel, usually iron powder, to form a chlorate candle, which produces oxygen by continuous reaction. The fuel is used to generate heat by oxidation. Once the reaction begins, oxygen is released from the hot salt by thermal decomposition (a thermal shield is used around the generator). A portion of the oxygen reacts with the fuel to produce more heat, which produces more oxygen, and so on. Initiation of the reaction can be achieved by a percussion device, friction device or electric wire. | 3356     |

| 3369   | -                                  | -                          | F-B, S-J               | Category E                      | SG7<br>SG30  | Desensitized explosive. Substance in pure form consists of yellow powder. May form extremely sensitive compounds with heavy metals or their salts. When involved in a fire, evolves toxic fumes; in closed compartments, these fumes may form an explosive mixture with air. Explosive and sensitive to friction in the dry state. Toxic if swallowed, by skin contact or by inhalation.  | 3369   |
| 3370   | -                                  | -                          | F-B, S-J               | Category E                      | SG7<br>SG30  | Desensitized explosive. May form extremely sensitive compounds with heavy metals or their salts. Explosive and sensitive to friction in the dry state. Harmful if swallowed or by skin contact.   | 3370   |
| 3371   | T4                                 | TP1                        | F-E, S-D               | Category B                      | -  | Colourless liquid. Flashpoint: -3.5°C. Explosive limits: 1.3 to 13.9%. Slightly miscible with water.  | 3371   |
| 3373   | T1<br>BK2                          | TP1                        | F-A, S-T               | Category C<br>SW2<br>SW18       | -  | Substances which are known or are reasonably expected to contain pathogens, transported in a form that, when exposure to it occurs, are not capable of causing permanent disability, life-threatening or fatal disease to humans or animals. Human or animal specimens for which there is minimal likelihood that pathogens are present are not subject to the provisions of this Code (see 2.6.3.2.3.6). Other exemptions are stated in 2.6.3.2.3. | 3373   |
| 3374   | -                                  | -                          | F-D, S-U               | Category D<br>SW1<br>SW2        | SG46   | Flammable gas with slight odour. Explosive limits: 2.1 to 80%. Lighter than air (0.907). Acetylene without solvent. Rough handling and exposure to local heating should be avoided, since these conditions may result in delayed explosion. Empty cylinders should be carried with the same precautions as filled cylinders.  | 3374   |
| 3375   | T1                                 | TP1<br>TP9<br>TP17<br>TP32 | F-H, S-Q               | Category D<br>SW1               | SGG2<br>SG16<br>SG42<br>SG45<br>SG47<br>SG48<br>SG51<br>SG56<br>SG58<br>SG59<br>SG61 | Non-sensitized emulsions, suspensions and gels consisting primarily of a mixture of ammonium nitrate and fuel, intended to produce a Type E blasting explosive only after further processing prior to use. Substances shall satisfactorily pass test series 8 of the <i>Manual of Tests and Criteria</i> , part I, section 18 and be approved by the competent authority.   | 3375   |
| 3376   | -                                  | -                          | F-B, S-J               | Category E                      | SG7<br>SG30  | Desensitized explosive. Dark orange solid. Explosive and sensitive to friction in the dry state. May form extremely sensitive compounds with heavy metals or their salts. Harmful if swallowed or by skin contact.  | 3376   |
| 3377   | T1<br>BK2<br>BK3                   | TP33                       | F-A, S-Q               | Category A<br>SW1<br>SW23<br>H1 | SGG16<br>SG59  | White crystals or powder. Partially soluble in water. Mixtures with combustible material are readily ignited and may burn fiercely. Risk of decomposition when exposed to continuous heat (exothermic decomposition ≥ 60°C). When involved in a fire or exposed to high temperatures, it may decompose, yielding oxygen and steam. Harmful if swallowed.  | 3377   |
| 3378   | T3<br>BK2                          | TP33                       | F-A, S-Q               | Category A<br>SW1<br>H1         | SGG16<br>SG59  | White crystals or powder. Soluble in water. Mixtures with combustible material are readily ignited. Decomposes in contact with water and acids, forming hydrogen peroxide. Risk of decomposition when exposed to continuous heat (exothermic decomposition ≥ 60°C). When involved in a fire or exposed to high temperatures, it may decompose, yielding oxygen and steam. Irritating to eyes, skin and mucous membranes. Harmful if swallowed.      | 3378   |
| 3378   | T1<br>BK2<br>BK3                   | TP33                       | F-A, S-Q               | Category A<br>SW1<br>SW23<br>H1 | SGG16<br>SG59  | See entry above.  | 3378   |

Reacts with moisture, water or acids, evolving hydrogen, a flammable gas. When heated, evolves toxic vapours.   | 3401   |
| –      | T9                                 | TP7<br>TP33                | F-G, S-N               | Category D<br>H1        | SGG7<br>SGG11<br>SG26<br>SG35 | Consists of metal alloyed with mercury. Contains 2% to 10% alkaline earth metals and may contain up to 98% mercury. Reacts with moisture, water or acids, evolving hydrogen, a flammable gas. When heated, evolves toxic vapours.  | 3402   |
| –      | T9                                 | TP7<br>TP33                | F-G, S-L               | Category D<br>H1        | SG26<br>SG35                  | Soft, silvery metal. Floats on water. Reacts violently with moisture, water or acids, evolving hydrogen, which may be ignited by the heat of the reaction. Highly reactive, sometimes with explosive effect.   | 3403   |
| –      | T9                                 | TP7<br>TP33                | F-G, S-L               | Category D<br>H1        | SG26<br>SG35                  | Soft, silvery metal. Floats on water. Reacts violently with moisture, water or acids, evolving hydrogen, which may be ignited by the heat of the reaction. Highly reactive, sometimes with explosive effect.   | 3404   |
| –      | T4                                 | TP1                        | F-H, S-Q               | Category A              | SGG4<br>SG38<br>SG49<br>SG62  | Colourless aqueous solution. Reacts vigorously with sulphuric acid. Reacts fiercely with cyanides when heated. May form explosive mixtures with combustible material, powdered metals or ammonium compounds. These mixtures are liable to ignite. When involved in a fire, may cause an explosion. Toxic if swallowed, by skin contact or by inhalation. Leakage and subsequent evaporation of the water from the solutions may present increased dangers as follows:<br>.1 in contact with combustible material (particularly fibrous material such as jute, cotton or sisal) or sulphur, danger of spontaneous combustion,<br>.2 in contact with ammonium compounds, powdered metals or oils, danger of explosion. | 3405   |

Melting point: 23°C. Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.   | 3419   |
| -      | T3                                 | TP33                | F-A, S-B               | Category A                     | SGG1<br>SG36<br>SG49                 | White crystalline solid. Melting point: 28°C. Highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes.   | 3420   |
| -      | T7                                 | TP2                 | F-A, S-B               | Category A<br>SW1<br>SW2       | SGG1<br>SG35<br>SG36<br>SG49         | Decomposed by heat or acids, evolving hydrogen fluoride, a toxic, extremely irritating and corrosive gas apparent as white fumes. In the presence of moisture, highly corrosive to glass, other siliceous materials and most metals. Toxic if swallowed, by skin contact or by inhalation. Causes burns to skin, eyes and mucous membranes. | 3421   |
| -      | T4                                 | TP1                 | F-A, S-B               | Category A<br>SW1<br>SW2       | SGG1<br>SG35<br>SG36<br>SG49         | See entry above.  | 3421   |
| -      | T4                                 | TP1                 | F-A, S-A               | Category A                     | SG35                                 | Decomposed by acids, evolving hydrogen fluoride, an irritating and corrosive gas. Toxic if swallowed, by skin contact or by inhalation.   | 3422   |
| -      | T6                                 | TP33                | F-A, S-B               | Category A                     | SGG2<br>SGG18<br>SG35                | Very soluble in water with a strong ammonia-like odour. Highly toxic if swallowed, by skin contact or by dust inhalation. When heated emits toxic fumes of nitrogen and ammonia. Corrosive to metals and tissue. Causes burns to skin, eyes and mucous membranes. Reacts violently with acids.  | △ 3423 |
| -      | T7                                 | TP2                 | F-A, <u>S-A</u>        | Category B                     | SGG2<br>SG15<br>SG16<br>SG30<br>SG63 | The commercial product is a 50% suspension in water. May support combustion and burn without oxygen. When involved in a fire, evolves toxic fumes. Forms extremely sensitive explosive compounds with lead, silver or other heavy metals and their compounds. Toxic if swallowed, by skin contact or by inhalation.                         | 3424   |

| –      | T3                                 | TP33          | F-A, S-A               | Category B<br>SW2       | –                    | Colourless solid with a pungent odour. Melting point: 23°C. Insoluble in water. Reacts with water, evolving carbon dioxide. Toxic if swallowed, by skin contact or by inhalation. Irritating to skin, eyes and mucous membranes.   | 3428   |
| –      | T4                                 | TP1           | F-A, S-A               | Category A              | –                    | Brown liquid. Toxic if swallowed, by skin contact or by inhalation.  | 3429   |
| –      | T7                                 | TP2           | F-A, S-A               | Category A              | –                    | The commercial products are liquids with a pungent tar odour. Toxic if swallowed, by skin contact or by inhalation.  | 3430   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A<br>SW2       | –                    | Low melting point (31°C to 32°C) solids with an aromatic odour. Insoluble in water. Toxic if swallowed, by skin contact or by inhalation.  | 3431   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A              | SG50                 | Solids with perceptible odour. Insoluble in water. Harmful by ingestion or by skin contact. If spilled, can be a persistent hazard to the environment. This entry also covers articles, such as rags, cotton waste, clothing or sawdust, containing polychlorinated biphenyls where no free visible liquid is present. | 3432   |
| –      | T4                                 | TP1           | F-A, S-A               | Category A              | –                    | Slightly miscible in water. Toxic if swallowed, by skin contact or by inhalation.  | 3434   |
| –      | T3                                 | TP33          | F-A, S-A               | Category B<br>SW2       | –                    | This entry covers solid hydrate and hexafluoroacetone. Melting point of the pure substance: 23°C. Toxic if swallowed, by skin contact or by inhalation.  | 3436   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A<br>SW1<br>H2 | –                    | White or pink crystals with a phenol-like odour. Melting point: 45°C to 68°C. Slightly soluble in water. Decomposes when heated, evolving extremely toxic fumes (phosgene). Toxic if swallowed, by skin contact or by inhalation.  | 3437   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A              | –                    | Slightly soluble in water. Melting point: 21°C (pure substance). Toxic if swallowed, by skin contact or by inhalation.   | 3438   |
| –      | T6                                 | TP33          | F-A, S-A               | Category B              | SG35                 | Solid, evolving toxic vapours. Reacts with acids or acid fumes, evolving hydrogen cyanide, a highly toxic and flammable gas. Soluble in water. Toxic if swallowed, by skin contact or by inhalation.   | 3439   |
| –      | T3                                 | TP33          | F-A, S-A               | Category B              | SG35                 | See entry above.   | 3439   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A              | SG35                 | See entry above.   | 3439   |

| –      | T3                                 | TP33          | F-A, S-A               | Category A                     | –   | Deliquescent crystals or solids or pastes. Soluble in water. Toxic if swallowed, by skin contact or by inhalation.   | 3444   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A                     | –   | Solid or paste. Soluble in water. Toxic if swallowed, by skin contact or by inhalation.  | 3445   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A                     | –   | Yellow solid. Melting point: <i>para</i> -NITROTOLUENE: 52°C to 54°C. Toxic if swallowed, by skin contact or by inhalation.  | 3446   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A                     | –   | Yellow solid. Melting points: 4-NITRO-2-XYLENE: 29°C to 31°C, 5-NITRO-3-XYLENE: 72°C to 74°C. Insoluble in water. Toxic if swallowed, by skin contact or by inhalation.  | 3447   |
| –      | T6                                 | TP33          | F-A, S-A               | Category D<br>SW2              | –   | “Tear gas substance” is a generic term for substances which, in minute quantities dispersed in air, cause extreme eye irritation and profuse tears. Toxic if swallowed, by skin contact or by inhalation.  | 3448   |
| –      | T3                                 | TP33          | F-A, S-A               | Category D<br>SW2              | –   | See entry above.   | 3448   |
| –      | T6                                 | TP33          | F-A, S-A               | Category D<br>SW1<br>SW2<br>H2 | SGG6<br>SG35  | Volatile, yellow crystals evolving irritating vapours (“Tear Gas”). Melting point: <i>meta</i> -BROMOBENZYL CYANIDE 25°C. Highly toxic if swallowed, by skin contact or by inhalation.   | 3449   |
| –      | T6                                 | TP33          | F-A, S-A               | Category D<br>SW2              | –   | When pure, volatile, colourless crystals evolving an irritating vapour (“Tear Gas”). Melting point: 41°C. Highly toxic if swallowed, by skin contact or by inhalation.   | 3450   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A                     | –   | <i>para</i> -TOLUIDINE is solid in pure form, with a melting point of approximately 45°C. Toxic if swallowed, by skin contact or by inhalation.  | 3451   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A                     | –   | 3,4-Dimethylaniline is a solid, which has a melting point of 47°C. Toxic if swallowed, by skin contact or by dust inhalation.  | 3452   |
| –      | T1                                 | TP33          | F-A, S-B               | Category A                     | SGG1<br>SG36<br>SG49                                | Very deliquescent, crystalline solid. Melting point: 42°C. Soluble in water. Mildly corrosive to most metals.  | 3453   |
| –      | T3                                 | TP33          | F-A, S-A               | Category A                     | –   | Yellow crystals or flakes, insoluble in water. Toxic if swallowed, by skin contact or by inhalation.   | 3454   |
| –      | T3                                 | TP33          | F-A, S-B               | Category B                     | –   | Light yellow solid. Soluble in water. Melting points of CRESOLS: <i>ortho</i> -CRESOL: 30°C, <i>para</i> -CRESOL: 35°C. Toxic if swallowed, by skin contact or by inhalation. Cause burns to skin, eyes and mucous membranes.                                    | 3455   |
| –      | T3                                 | TP33          | F-A, S-B               | Category D<br>SW2              | SGG1<br>SG6<br>SG16<br>SG17<br>SG19<br>SG36<br>SG49 | Crystalline solid. Oxidant which may cause fire with organic materials (such as wood, straw, etc.). When involved in a fire, evolves toxic gases. In the presence of moisture, highly corrosive to most metals. Causes burns to skin, eyes and mucous membranes. | 3456   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A                     | SG6<br>SG8<br>SG10<br>SG12                          | Melting range 20°C to 40°C. Insoluble in water. Oxidizing substance which may explode or burn fiercely when in contact with organic materials. Toxic if swallowed, by skin contact or by inhalation.   | 3457   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A                     | –   | Light reddish or amber crystals. Melting points: 38°C to 54°C. Insoluble in water. Toxic if swallowed, by skin contact or by inhalation.   | 3458   |
| –      | T1                                 | TP33          | F-A, S-A               | Category A                     | –   | Colourless to pale yellow crystals which may liquefy under transport conditions. Melting points: 1-BROMO-2-NITROBENZENE: 43°C. 1-BROMO-4-NITROBENZENE: 127°C. Insoluble in water. Toxic if swallowed, by skin contact or by inhalation.                          | 3459   |

| 3557   | -                                  | -             | F-A, S-I               | Category A                    | -                     | This entry applies to vehicles powered by lithium metal batteries with the batteries installed, such as electrically-powered cars, lawn tractors, wheelchairs and other mobility aids.  | 3557   |
| 3558   | -                                  | -             | F-A, S-I               | Category A                    | -                     | This entry applies to vehicles powered by sodium ion batteries with the batteries installed, such as electrically-powered cars, lawn tractors, wheelchairs and other mobility aids.   | 3558   |
| 3559   | -                                  | -             | F-B, S-X               | Category A                    | -                     | Articles which contain a pyrotechnic substance, which are intended to disperse a fire extinguishing agent (or aerosol) when activated, and which do not contain any other dangerous goods.  | 3559   |
| 3560   | T14                                | TP2           | F-A, S-B               | Category D<br>SW2             | SGG2<br>SGG18<br>SG35 | Colourless liquid with a strong ammonia-like odour that is miscible with water. Highly toxic if swallowed, by skin contact or by inhalation. Corrosive to metal. When heated emits toxic fumes of nitrogen oxides and ammonia. Causes burns to skin, eyes, and mucous membranes. Reacts violently with acids. | 3560   |

## Chapter 3.3

### *Special provisions applicable to certain substances, materials or articles*

- 3.3.1 When column 6 of the Dangerous Goods List indicates that a special provision is relevant to a dangerous good, the meaning and requirement(s) of that special provision are as set out below. Where a special provision includes a requirement for package marking, the provisions of 5.2.1.2.1 to .4 shall be met. If the required mark is in the form of specific wording indicated in quotation marks, such as "LITHIUM BATTERIES FOR DISPOSAL", the size of the mark shall be at least 12 mm, unless otherwise indicated in the special provision or elsewhere in this Code.
- 16 Samples of new or existing explosive substances or articles may be transported as directed by the competent authority for purposes including: testing, classification, research and development, quality control, or as a commercial sample. Explosive samples which are not wetted or desensitized shall be limited to 10 kg in small packages as specified by the competent authority. Explosive samples which are wetted or desensitized shall be limited to 25 kg.
- 23 Even though this substance has a flammability hazard, it only exhibits such hazard under extreme fire conditions in confined areas.
- 26 This substance is not permitted for transport in portable tanks, or intermediate bulk containers with a capacity exceeding 450 L, due to the potential initiation of an explosion when transported in large volumes.
- △ 28 This substance may be transported under the provisions of class 3 or class 4.1 only if it is so packaged that the percentage of diluent will not fall below that stated, at any time during transport (see 2.3.1.4 and 2.4.2.4). In cases where the diluent is not stated, the substance shall be packed so that the amount of explosive substance does not exceed the stated value.
- 29 The packages, including bales, are exempt from labelling provided that they are marked with the appropriate class (e.g. "class 4.2").
- 32 When in any other form, this substance is not subject to the provisions of this Code.
- 37 When coated, this substance is not subject to the provisions of this Code.
- 38 This substance, when it contains not more than 0.1% calcium carbide, is not subject to the provisions of this Code.
- 39 This substance, when it contains less than 30% or not less than 90% silicon, is not subject to the provisions of this Code.
- 43 When offered for transport as pesticides, these substances shall be transported under the relevant pesticide entry and in accordance with the relevant pesticide provisions (see 2.6.2.3 and 2.6.2.4).
- 45 Antimony sulphides and oxides which contain not more than 0.5% of arsenic, calculated on the total mass, are not subject to the provisions of this Code.
- 47 Ferricyanides and ferrocyanides are not subject to the provisions of this Code.
- 59 These substances, when they contain not more than 50% magnesium, are not subject to the provisions of this Code.
- 61 The technical name, which shall supplement the proper shipping name, shall be the ISO common name, or other name listed in *The WHO Recommended Classification of Pesticides by Hazard and Guidelines to Classification* or the name of the active substance (see also 3.1.2.8.1.1).
- 62 This substance, when it contains not more than 4% sodium hydroxide, is not subject to the provisions of this Code.
- 63 The division of class 2 and the subsidiary hazards depend on the nature of the contents of the aerosol dispenser. The following provisions shall apply:
- .1 Class 2.1 applies if the contents include 85% by mass or more flammable components and the chemical heat of combustion is 30 kJ/g or more;
  - .2 Class 2.2 applies if the contents contain 1% by mass or less flammable components and the heat of combustion is less than 20 kJ/g.

## Part 3 – Dangerous Goods List, special provisions and exceptions

3

- .3 Otherwise the product shall be classified as tested by the tests described in the *Manual of Tests and Criteria*, part III, section 31. Extremely flammable and flammable aerosols shall be classified in class 2.1; non-flammable in class 2.2;
- .4 Gases of class 2.3 shall not be used as a propellant in an aerosol dispenser;
- .5 Where the contents other than the propellant of aerosol dispensers to be ejected are classified as class 6.1 packing groups II or III or class 8 packing groups II or III, the aerosol shall have a subsidiary hazard of class 6.1 or class 8;
- .6 Aerosols with contents meeting the criteria for packing group I for toxicity or corrosivity shall be prohibited from transport;
- .7 Except for consignments transported in limited quantities (see chapter 3.4), packages containing aerosols shall bear labels for the primary hazard and for the subsidiary hazard(s), if any.

Flammable components are flammable liquids, flammable solids or flammable gases and gas mixtures as defined in notes 1 to 3 of subsection 31.1.3 of part III of the *Manual of Tests and Criteria*. This designation does not cover pyrophoric, self-heating or water-reactive substances. The chemical heat of combustion shall be determined by one of the following methods: ASTM D240, ISO/FDIS 13943:1999 (E/F) 86.1 to 86.3 or NFPA 30B.

- 65 Hydrogen peroxide aqueous solutions with less than 8% hydrogen peroxide are not subject to the provisions of this Code.
- 66 Cinnabar is not subject to the provisions of this Code.
- 105 Nitrocellulose meeting the descriptions of UN 2556 or UN 2557 may be classified in class 4.1.
- 113 The transport of chemically unstable mixtures is prohibited.
- 117 Only regulated when transported by sea.
- 119 Refrigerating machines and refrigerating-machinery components including machines or other appliances which have been designed for the specific purpose of keeping food or other items at a low temperature in an internal compartment, and air-conditioning units. Refrigerating machines and refrigerating-machine components are not subject to the provisions of this Code if they contain less than 12 kg of gas in class 2.2 or less than 12 L of ammonia solution (UN 2672).
- 122 The subsidiary hazard(s), the control and emergency temperatures, if any, and the generic entry number for each of the currently assigned organic peroxide formulations are given in 2.5.3.2.4, 4.1.4.2 packing instruction IBC520 and 4.2.5.2.6 portable tank instruction T23.
- 123 Only regulated when transported by air or by sea.
- 127 Other inert material or inert material mixture may be used at the discretion of the competent authority, provided this inert material has identical phlegmatizing properties.
- 131 The phlegmatized substance shall be significantly less sensitive than dry PETN.
- 133 If over-confined in packagings, this substance may exhibit explosive behaviour. Packagings authorized under packing instruction P409 are intended to prevent over-confinement. When a packaging other than those prescribed under packing instruction P409 is authorized by the competent authority of the country of origin in accordance with 4.1.3.7, the package shall bear an "EXPLOSIVE" subsidiary hazard label (Model No. 1, see 5.2.2.2.2) unless the competent authority of the country of origin has permitted this label to be dispensed with for the specific packaging employed because test data have proved that the substance in this packaging does not exhibit explosive behaviour (see 5.4.1.5.5.1). The provisions of 7.1.3.1, 7.1.4.4 and 7.2.3.3 shall also be considered.
- 135 The dihydrated sodium salt of dichloroisocyanuric acid does not meet the criteria for inclusion in class 5.1 and is not subject to the provisions of this Code unless meeting the criteria for inclusion in another class or division.
- 138 *p*-Bromobenzyl cyanide is not subject to the provisions of this Code.
- 141 Products which have undergone sufficient heat treatment so that they present no hazard during transport are not subject to the provisions of this Code.
- 142 Solvent-extracted soya bean meal containing not more than 1.5% oil and 11% moisture, being substantially free from flammable solvents, which is accompanied by a certificate from the shipper stating that the substance, as offered for shipment, meets this requirement is not subject to the provisions of this Code.
- 144 An aqueous solution containing not more than 24% alcohol by volume is not subject to the provisions of this Code.
- 145 Alcoholic beverages of packing group III, when transported in receptacles of 250 L or less, are not subject to the provisions of this Code.
- 152 The classification of this substance will vary with particle size and packaging, but borderlines have not been experimentally determined. Appropriate classifications shall be made as required by 2.1.3.

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- 153 This entry applies only if it is demonstrated, on the basis of tests, that the substance, when in contact with water, is not combustible nor shows a tendency to auto-ignition and that the mixture of gases evolved is not flammable.
- 163 A substance specifically listed by name in the Dangerous Goods List shall not be transported under this entry. Materials transported under this entry may contain 20% or less nitrocellulose provided the nitrocellulose contains not more than 12.6% nitrogen (by dry mass).
- 168 Asbestos which is immersed or fixed in a natural or artificial binder (such as cement, plastics, asphalt, resins or mineral ore) in such a way that no escape of hazardous quantities of respirable asbestos fibres can occur during transport is not subject to the provisions of this Code. Manufactured articles containing asbestos and not meeting this provision are nevertheless not subject to the provisions of this Code when packaged so that no escape of hazardous quantities of respirable asbestos fibres can occur during transport.
- 169 Phthalic anhydride in the solid state and tetrahydrophthalic anhydride, with not more than 0.05% maleic anhydride, are not subject to the provisions of this Code. Phthalic anhydride molten at a temperature above its flashpoint, with not more than 0.05% maleic anhydride, shall be classified under UN 3256.
- 172 Where a radioactive material has (a) subsidiary hazard(s):
- .1 The substance shall be allocated to packing group I, II or III, if appropriate, by application of the packing group criteria provided in part 2 corresponding to the nature of the predominant subsidiary hazard;
  - .2 Packages shall be labelled with subsidiary hazard labels corresponding to each subsidiary hazard exhibited by the material; corresponding placards shall be affixed to cargo transport units in accordance with the relevant provisions of 5.3.1;
  - .3 For the purposes of documentation and package marking, the proper shipping name shall be supplemented with the name of the constituents which most predominantly contribute to this (these) subsidiary hazard(s) and which shall be enclosed in parenthesis;
  - .4 The dangerous goods transport document shall indicate the class or division of the subsidiary hazard and, where assigned, the packing group as required by 5.4.1.4.1.4 and 5.4.1.4.1.5.
- For packing, see also 4.1.9.1.5.
- 177 Barium sulphate is not subject to the provisions of this Code.
- 178 This entry shall be used only when no other appropriate entry exists in the list, and only with the approval of the competent authority of the country of origin.
- 181 Packages containing this type of substance shall bear the “EXPLOSIVE” subsidiary hazard label (Model No. 1, see 5.2.2.2.2) unless the competent authority of the country of origin has permitted this label to be dispensed with for the specific packaging employed because test data have proved that the substance in this packaging does not exhibit explosive behaviour (see 5.4.1.5.5.1). The provisions of 7.2.3.3 shall also be considered.
- 182 The group of alkali metals includes lithium, sodium, potassium, rubidium and caesium.
- 183 The group of alkaline earth metals includes magnesium, calcium, strontium and barium.
- 188 Cells and batteries offered for transport are not subject to other provisions of this Code if they meet the following:
- △ .1 For a lithium metal or lithium alloy cell, the lithium content is not more than 1 g, and for a lithium-ion or sodium-ion cell, the watt-hour rating is not more than 20 Wh;
  - △ .2 For a lithium metal or lithium alloy battery, the aggregate lithium content is not more than 2 g, and for a lithium-ion or sodium-ion battery, the watt-hour rating is not more than 100 Wh. Lithium-ion and sodium-ion batteries subject to this provision shall be marked with the watt-hour rating on the outside case, except lithium-ion batteries manufactured before 1 January 2009;
  - △ .3 Each lithium cell or battery meets the provisions of 2.9.4.1, 2.9.4.5, 2.9.4.6 if applicable and 2.9.4.7 or for sodium-ion cells or batteries, the provisions of 2.9.5.1, 2.9.5.5 and 2.9.5.6 shall apply;
  - .4 Cells and batteries, except when installed in equipment, shall be packed in inner packagings that completely enclose the cell or battery. Cells and batteries shall be protected so as to prevent short circuits. This includes protection against contact with electrically conductive material within the same packaging that could lead to a short circuit. The inner packagings shall be packed in strong outer packagings which conform to the provisions of 4.1.1.1, 4.1.1.2, and 4.1.1.5;

## Part 3 – Dangerous Goods List, special provisions and exceptions

3

- .5 Cells and batteries when installed in equipment shall be protected from damage and short circuit, and the equipment shall be equipped with an effective means of preventing accidental activation. This requirement does not apply to devices which are intentionally active in transport (radio frequency identification (RFID) transmitters, watches, sensors, etc.) and which are not capable of generating a dangerous evolution of heat. When batteries are installed in equipment, the equipment shall be packed in strong outer packagings constructed of suitable material of adequate strength and design in relation to the packaging's capacity and its intended use unless the battery is afforded equivalent protection by the equipment in which it is contained;
- △ .6 Each package shall be marked with the appropriate lithium or sodium ion battery mark, as illustrated in 5.2.1.10;
- Note:** Packages containing lithium batteries packed in conformity with the provisions of part 4, chapter 11, packing instructions 965 or 968, Section IB of the ICAO Technical Instructions for the Safe Transport of Dangerous Goods by Air that bear the mark as shown in 5.2.1.10 (lithium battery mark) and the label shown in 5.2.2.2.2, Model No. 9A shall be deemed to meet the provisions of this special provision.
- This requirement does not apply to:
- .1 packages containing only button cell batteries installed in equipment (including circuit boards); and
- .2 packages containing no more than four cells or two batteries installed in equipment, where there are not more than two packages in the consignment.
- △ When packages are placed in an overpack, the lithium or sodium battery mark shall either be clearly visible or be reproduced on the outside of the overpack and the overpack shall be marked with the word "OVERPACK". The lettering of the "OVERPACK" mark shall be at least 12 mm high;
- .7 Except when cells or batteries are installed in equipment, each package shall be capable of withstanding a 1.2 m drop test in any orientation without damage to cells or batteries contained therein, without shifting of the contents so as to allow battery to battery (or cell to cell) contact and without release of contents; and
- △ .8 Except when cells or batteries are installed in or packed with equipment, packages shall not exceed 30 kg gross mass. As used in this special provision "equipment" means apparatus for which the cells or batteries will provide electrical power for its operation.

As used above and elsewhere in this Code, "lithium content" means the mass of lithium in the anode of a lithium metal or lithium alloy cell.

Separate entries exist for lithium metal batteries and lithium ion batteries to facilitate the transport of these batteries for specific modes of transport and to enable the application of different emergency response actions.

A single cell battery as defined in part III, subsection 38.3.2.3 of the *Manual of Tests and Criteria* is considered a "cell" and shall be transported according to the requirements for "cells" for the purpose of this special provision.

- 190 Aerosol dispensers shall be provided with protection against inadvertent discharge. Aerosols with a capacity not exceeding 50 mL containing only non-toxic constituents are not subject to the provisions of this Code.
- 191 Receptacles with a capacity not exceeding 50 mL containing only non-toxic constituents are not subject to the provisions of this Code.
- 193 This entry may only be used for ammonium nitrate based compound fertilizers. They shall be classified in accordance with the procedure as set out in the *Manual of Tests and Criteria*, part III, section 39.
- 194 The control and emergency temperatures, if any, and the generic entry number for each of the currently assigned self-reactive substances are given in 2.4.2.3.2.3.
- 195 For certain organic peroxides types B or C, a smaller packaging than that allowed by packing methods OP5 or OP6 respectively has to be used (see 4.1.7 and 2.5.3.2.4).
- 196 Formulations which, in laboratory testing, neither detonate in the cavitated state nor deflagrate, which show no effect when heated under confinement and which exhibit no explosive power may be transported under this entry. The formulation must also be thermally stable (i.e. the SADT is 60°C or higher for a 50 kg package). Formulations not meeting these criteria shall be transported under the provisions of class 5.2 (see 2.5.3.2.4).
- 198 Nitrocellulose solutions containing not more than 20% nitrocellulose may be transported as paint, perfumery products or printing ink, as applicable. See UN Nos. 1210, 1263, 1266, 3066, 3469 and 3470.

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- 199 Lead compounds which, when mixed in a ratio of 1:1000 with 0.07M hydrochloric acid and stirred for one hour at a temperature of 23°C ± 2°C, exhibit a solubility of 5% or less (see ISO 3711:1990, *Lead chromate pigments and lead chromate-molybdate pigments – Specifications and methods of test*) are considered insoluble and are not subject to the provisions of this Code unless they meet the criteria for inclusion in another hazard class.
- 201 Lighters and lighter refills shall comply with the provisions of the country in which they were filled. They shall be provided with protection against inadvertent discharge. The liquid portion of the gas shall not exceed 85% of the capacity of the receptacle at 15°C. The receptacles, including the closures, shall be capable of withstanding an internal pressure of twice the pressure of the liquefied petroleum gas at 55°C. The valve mechanisms and ignition devices shall be securely sealed, taped or otherwise fastened or designed to prevent operation or leakage of the contents during transport. Lighters shall not contain more than 10 g of liquefied petroleum gas. Lighter refills shall not contain more than 65 g of liquefied petroleum gas.
- 203 This entry shall not be used for polychlorinated biphenyls, UN 2315.
- 204 Articles containing smoke-producing substance(s) corrosive according to the criteria for class 8 shall be labelled with a “CORROSIVE” subsidiary hazard label (Model No. 8, see 5.2.2.2.2).
- △ Articles containing smoke-producing substance(s) toxic by inhalation according to the criteria for class 6.1 shall be labelled with a “TOXIC” subsidiary hazard label (Model No. 6.1, see 5.2.2.2.2).
- 205 This entry shall not be used for PENTACHLOROPHENOL, UN 3155.
- 207 Plastics moulding compounds may be made from polystyrene, poly(methyl methacrylate) or other polymeric material.
- 208 The commercial grade of calcium nitrate fertilizer, when consisting mainly of a double salt (calcium nitrate and ammonium nitrate) containing not more than 10% ammonium nitrate and at least 12% water of crystallization, is not subject to the provisions of this Code.
- 209 The gas shall be at a pressure corresponding to ambient atmospheric pressure at the time the containment system is closed and this shall not exceed 105 kPa absolute.
- 210 Toxins from plant, animal or bacterial sources which contain infectious substances, or toxins that are contained in infectious substances, shall be classified under class 6.2.
- 215 This entry only applies to the technically pure substance or to formulations derived from it, having an SADT higher than 75°C, and, therefore, does not apply to formulations which are self-reactive substances (for self-reactive substances, see 2.4.2.3.2.3). Homogeneous mixtures containing not more than 35% by mass of azodicarbonamide and at least 65% of inert substance are not subject to this Code unless criteria of other classes are met.
- 216 Mixtures of solids which are not subject to the provisions of this Code and flammable liquids may be transported under this entry without first applying the classification criteria of class 4.1, provided there is no free liquid visible at the time the substance is loaded or at the time the packaging or cargo transport unit is closed. Each cargo transport unit shall be leakproof when used as a bulk container. Sealed packets and articles containing less than 10 mL of a packing group II or III flammable liquid absorbed into a solid material are not subject to the provisions of this Code provided there is no free liquid in the packet or article.
- 217 This entry shall only be used for mixtures of solids which are not subject to the provisions of this Code and toxic liquids may be transported under this entry without first applying the classification criteria of class 6.1, provided there is no free liquid visible at the time the substance is loaded or at the time the packaging or cargo transport unit is closed. Each cargo transport unit shall be leakproof when used as a bulk container. This entry shall not be used for solids containing a packing group I liquid.
- 218 This entry shall only be used for mixtures of solids which are not subject to the provisions of this Code and corrosive liquids may be transported under this entry without first applying the classification criteria of class 8, provided there is no free liquid visible at the time the substance is loaded or at the time the packaging or cargo transport unit is closed. Each cargo transport unit shall be leakproof when used as a bulk container. This entry shall not be used for solids containing a packing group I liquid.
- 219 Genetically modified microorganisms (GMMOs) and genetically modified organisms (GMOs) packed and marked in accordance with packing instruction P904 are not subject to any other provisions of this Code.
- If GMMOs or GMOs meet the definition in chapter 2.6 of a toxic substance or an infectious substance and the criteria for inclusion in class 6.1 or 6.2, the provisions of this Code for transporting toxic substances or infectious substances apply.
- 220 The technical name of the flammable liquid component only of this solution or mixture shall be shown in parentheses immediately following the proper shipping name.

## Part 3 – Dangerous Goods List, special provisions and exceptions

- 221 Substances included under this entry shall not be of packing group I.
- 223 If the chemical or physical properties of a substance covered by this description are such that, when tested, it does not meet the established defining criteria for the class or division listed in column 3, or any other class or division, it is not subject to the provisions of this Code except in the case of a marine pollutant where 2.10.3 applies.
- 224 Unless it can be demonstrated by testing that the sensitivity of the substance in its frozen state is no greater than in its liquid state, the substance shall remain liquid during normal transport conditions. It shall not freeze at temperatures above  $-15^{\circ}\text{C}$ .
- 225 Fire extinguishers under this entry may include installed actuating cartridges (cartridges, power device of division 1.4C or 1.4S) without changing the classification of class 2.2 provided the total quantity of deflagrating (propellant) explosives does not exceed 3.2 g per extinguishing unit. Fire extinguishers shall be manufactured, tested, approved and labelled according to the provisions applied in the country of manufacture.

**Note:** "Provisions applied in the country of manufacture" means the provisions applicable in the country of manufacture or those applicable in the country of use.

Fire extinguishers under this entry include:

- .1 portable fire extinguishers for manual handling and operation;  
**Note:** This entry applies to portable fire extinguishers, even if some components that are necessary for their proper functioning (e.g. hoses and nozzles) are temporarily detached, as long as the safety of the pressurized extinguishing agent containers is not compromised and the fire extinguishers continue to be identified as portable fire extinguishers.
- .2 fire extinguishers for installation in aircraft;
- .3 fire extinguishers mounted on wheels for manual handling;
- .4 fire extinguishing equipment or machinery mounted on wheels or wheeled platforms or units transported similar to (small) trailers; and
- .5 fire extinguishers composed of a non-rollable pressure drum and equipment, and handled, e.g. by fork lift or crane when loaded or unloaded.

**Note:** Pressure receptacles which contain gases for use in the above-mentioned extinguishers or for use in stationary fire-fighting installations shall meet the requirements in chapter 6.2 and all requirements applicable to the relevant dangerous goods when these pressure receptacles are transported separately.

- 226 Formulations of these substances containing not less than 30% non-volatile, non-flammable phlegmatizer are not subject to the provisions of this Code.
- 227 When phlegmatized with water and inorganic inert material, the content of urea nitrate may not exceed 75% by mass and the mixture shall not be capable of being detonated by the series 1, type (a) test in the *Manual of Tests and Criteria*, part I.
- 228 Mixtures not meeting the criteria for flammable gases (class 2.1) shall be transported under UN 3163.
- △ 230 Lithium cells and batteries may be transported under this entry if they meet the provisions of 2.9.4. Sodium-ion cells and batteries may be transported under this entry if they meet the provisions of 2.9.5.
- 232 This entry shall only be used when the substance does not meet the criteria of any other class. Transport in cargo transport units other than in tanks shall be in accordance with standards specified by the competent authority of the country of origin.
- 235 This entry applies to articles which contain class 1 explosive substances and which may also contain dangerous goods of other classes. These articles are used to enhance safety in vehicles, vessels or aircraft, e.g. air bag inflators, air bag modules, seat-belt pretensioners, and pyromechanical devices.
- 236 Polyester resin kits consist of two components: a base material (either class 3 or class 4.1, packing group II or III) and an activator (organic peroxide). The organic peroxide shall be type D, E, or F, not requiring temperature control. The packing group shall be II or III, according to the criteria of either class 3 or class 4.1, as appropriate, applied to the base material. The quantity limit shown in column 7a of the Dangerous Goods List of chapter 3.2 applies to the base material.
- 237 The membrane filters, including paper separators, coating or backing materials, etc., that are present in transport, shall not be liable to propagate a detonation as tested by one of the tests described in the *Manual of Tests and Criteria*, part I, test series 1(a).

In addition, the competent authority may determine, on the basis of the results of suitable burning rate tests taking account of the standard tests in the *Manual of Tests and Criteria*, part III, 33.2, that nitrocellulose membrane filters in the form in which they are to be transported are not subject to the provisions of this Code applicable to flammable solids in class 4.1.

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- 238 .1 Batteries can be considered as non-spillable provided that they are capable of withstanding the vibration and pressure differential tests given below, without leakage of battery fluid:
- Vibration test:** The battery is rigidly clamped to the platform of a vibration machine and a simple harmonic motion having an amplitude of 0.8 mm (1.6 mm maximum total excursion) is applied. The frequency is varied at the rate of 1 Hz/min between the limits of 10 Hz and 55 Hz. The entire range of frequencies and return is traversed in  $95 \pm 5$  minutes for each mounting position (direction of vibration) of the battery. The battery is tested in three mutually perpendicular positions (to include testing with fill openings and vents, if any, in an inverted position) for equal time periods.
- Pressure differential test:** Following the vibration test, the battery is stored for six hours at  $24^{\circ}\text{C} \pm 4^{\circ}\text{C}$  while subjected to a pressure differential of at least 88 kPa. The battery is tested in three mutually perpendicular positions (to include testing with fill openings and vents, if any, in an inverted position) for at least six hours in each position.
- Non-spillable type batteries which are an integral part of and necessary for the operation of mechanical or electronic equipment shall be securely fastened in the battery holder on the equipment and protected in such a manner as to prevent damage and short circuits.
- 238 .2 Non-spillable batteries are not subject to the provisions of this Code if, at a temperature of  $55^{\circ}\text{C}$ , the electrolyte will not flow from a ruptured or cracked case and there is no free liquid to flow and if, when packaged for transport, the terminals are protected from short circuit.
- 239 Batteries or cells shall not contain dangerous goods other than sodium, sulphur or sodium compounds (e.g. sodium polysulphides and sodium tetrachloroaluminate). Batteries or cells shall not be offered for transport at a temperature such that liquid elemental sodium is present in the battery or cell, unless approved and under the conditions established by the competent authority.
- Cells shall consist of hermetically sealed metal casings which fully enclose the dangerous goods and which are so constructed and closed as to prevent the release of the dangerous goods under normal conditions of transport.
- Batteries shall consist of cells secured within and fully enclosed by a metal casing so constructed and closed as to prevent the release of the dangerous goods under normal conditions of transport.
- 240 *Deleted.*
- 241 The formulation shall be prepared so that it remains homogeneous and does not separate during transport. Formulations with low nitrocellulose contents and not showing dangerous properties when tested for their liability to detonate, deflagrate or explode when heated under defined confinement by tests of test series 1(a), 2(b) and 2(c) respectively in the *Manual of Tests and Criteria*, part I and not being a flammable solid when tested in accordance with test N.1 in the *Manual of Tests and Criteria*, part III, subsection 33.2.4 (chips, if necessary, crushed and sieved to a particle size of less than 1.25 mm) are not subject to the provisions of this Code.
- 242 Sulphur is not subject to the provisions of this Code when it has been formed to a specific shape (such as prills, granules, pellets, pastilles or flakes).
- 243 Gasoline, motor spirit and petrol for use in spark-ignition engines (e.g. in automobiles, stationary engines and other engines) shall be assigned to this entry regardless of variations in volatility.
- 244 This entry includes materials and substances such as aluminium dross, aluminium skimmings, spent cathodes, spent potliner and aluminium salt slags.
- Before loading, these by-products shall be cooled to ambient temperature, unless they have been calcined to remove moisture. Cargo transport units containing bulk loads shall be adequately ventilated and protected against ingress of water throughout the journey.
- 247 Alcoholic beverages containing more than 24% alcohol but not more than 70% by volume, when transported as part of the manufacturing process, may be transported in wooden barrels with a capacity of more than 250 L and not more than 500 L meeting the general requirements of 4.1.1, as appropriate, on the following conditions:
- .1 the wooden barrels shall be checked and tightened before filling;
  - .2 sufficient ullage (not less than 3%) shall be left to allow for the expansion of the liquid;
  - .3 the wooden barrels shall be transported with the bungholes pointing upwards;
  - .4 the wooden barrels shall be transported in containers meeting the provisions of the *International Convention for Safe Containers, 1972 (CSC Convention)*, as amended, and each wooden barrel shall be secured in custom-made cradles and be wedged by appropriate means to prevent it from being displaced in any way during transport; and
  - .5 when carried on board ships, the containers shall be stowed in open cargo spaces or in enclosed cargo spaces complying with the requirements for class 3 flammable liquids with a flashpoint of  $23^{\circ}\text{C}$  c.c. or less in regulation II-2/19 of SOLAS, 74, as amended or regulation II-2/54 of SOLAS 74, as amended by the resolutions indicated in II-2/1.2.1, as applicable.

## Part 3 – Dangerous Goods List, special provisions and exceptions

3

- 249 Ferrocium, stabilized against corrosion, with a minimum iron content of 10% is not subject to the provisions of this Code.
- 250 This entry may only be used for samples of chemicals taken for analysis in connection with the implementation of the Convention on the Prohibition of the Development, Production, Stockpiling and Use of Chemical Weapons and on their Destruction. The transport of substances under this entry shall be in accordance with the chain of custody and security procedures specified by the Organization for the Prohibition of Chemical Weapons.
- The chemical sample may only be transported provided prior approval has been granted by the competent authority or the Director General of the Organization for the Prohibition of Chemical Weapons and providing the sample complies with the following conditions:
- .1 it shall be packaged according to packing instruction 623 in the International Civil Aviation Organization's Technical Instructions for the Safe Transport of Dangerous Goods by Air; and
  - .2 during transport, it shall be accompanied by a copy of the document of approval for transport, showing the quantity limitations and the packing provisions.
- 251 The entry CHEMICAL KIT or FIRST AID KIT is intended to apply to boxes, cases, etc., containing small quantities of various dangerous goods which are used, for example, for medical, analytical, testing or repair purposes. Such kits shall only contain dangerous goods that are permitted as:
- .1 excepted quantities not exceeding the quantity indicated by the code in column 7b of the Dangerous Goods List of chapter 3.2, provided that the net quantity per inner packaging and net quantity per package are as prescribed in 3.5.1.2 and 3.5.1.3; or
  - .2 limited quantities as indicated in column 7a of the Dangerous Goods List of chapter 3.2, provided that the net quantity per inner packaging does not exceed 250 mL or 250 g.
- Components shall not react dangerously (see 4.1.1.6). The total quantity of dangerous goods in any one kit shall not exceed either 1 L or 1 kg.
- For the purposes of completion of the dangerous goods transport document as set out in 5.4.1.4.1, the packing group shown on the document shall be the most stringent packing group assigned to any individual substance in the kit. Where the kit contains only dangerous goods to which no packing group is assigned, no packing group need be indicated on the dangerous goods transport document.
- Kits which are carried on board vehicles for first-aid or operating purposes are not subject to the provisions of this Code.
- Chemical kits and first aid kits containing dangerous goods in inner packagings which do not exceed the quantity limits for limited quantities applicable to individual substances as specified in column 7a of the Dangerous Goods List may be transported in accordance with chapter 3.4.
- △ 252 .1 Ammonium nitrate hot concentrated solutions can be transported under this entry provided:
- .1 The solution contains not more than 93% ammonium nitrate.
  - .2 The solution contains at least 7% water.
  - .3 The solution contains not more than 0.2% combustible material.
  - .4 The solution contains no chlorine compounds in quantities such that the chloride ion level exceeds 0.02%.
  - .5 The pH of an aqueous solution of 10% of the substance is between 5 and 7, measured at 25°C.
  - .6 The maximum allowable transport temperature of the solution is 140°C.
- .2 Additionally, ammonium nitrate hot concentrate solutions are not subject to this Code provided:
- .1 The solution contains not more than 80% ammonium nitrate.
  - .2 The solution contains not more than 0.2% combustible material.
  - .3 The ammonium nitrate remains in solution under all conditions of transport.
  - .4 The solution does not meet the criteria of any other class or division.
- 266 This substance, when containing less alcohol, water or phlegmatizer than specified, shall not be transported, unless specifically authorized by the competent authority.
- 267 Any explosives, blasting, type C containing chlorates shall be segregated from explosives containing ammonium nitrate or other ammonium salts.
- 270 Aqueous solutions of class 5.1 inorganic solid nitrate substances are considered as not meeting the criteria of class 5.1 if the concentration of the substances in solution at the minimum temperature encountered in transport is not greater than 80% of the saturation limit.

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- 271 Lactose or glucose or similar materials may be used as a phlegmatizer provided that the substance contains not less than 90%, by mass, of phlegmatizer. The competent authority may authorize these mixtures to be classified under class 4.1 on the basis of series 6(c) tests of part I of the *Manual of Tests and Criteria* on at least three packages as prepared for transport. Mixtures containing at least 98%, by mass, of phlegmatizer are not subject to the provisions of this Code. Packages containing mixtures with not less than 90%, by mass, of phlegmatizer need not bear a “TOXIC” subsidiary hazard label.
- 272 This substance shall not be transported under the provisions of class 4.1 unless specifically authorized by the competent authority (see UN 0143 or UN 0150 as appropriate).
- 273 Maneb and maneb preparations stabilized against self-heating need not be classified in class 4.2 when it can be demonstrated by testing that a cubic volume of 1 m<sup>3</sup> of substance does not self-ignite and that the temperature at the centre of the sample does not exceed 200°C when the sample is maintained at a temperature of not less than 75°C ± 2°C for a period of 24 hours.
- 274 For the purposes of documentation and package marking, the proper shipping name shall be supplemented with the technical name (see 3.1.2.8.1).
- For UN 3077 and UN 3082 only, the technical name may be a name shown in capital letters in column 2 of the Dangerous Goods List, provided that this name does not include “N.O.S.” and that special provision 274 is not assigned. The name which most appropriately describes the substance or mixture shall be used, e.g.:
- UN 3082, ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S. (PAINT)
- UN 3082, ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S. (PERFUMERY PRODUCTS).
- 277 For aerosols or receptacles containing toxic substances, the limited quantity value is 120 mL. For all other aerosols or receptacles, the limited quantity value is 1,000 mL.
- 278 These substances shall not be classified and transported unless authorized by the competent authority on the basis of results from series 2 tests and series 6(c) tests of part I of the *Manual of Tests and Criteria* on packages as prepared for transport (see 2.1.3.1). The competent authority shall assign the packing group on the basis of the chapter 2.3 criteria and the package type used for the series 6(c) tests.
- 279 The substance is assigned to this classification or packing group based on human experience rather than the strict application of classification criteria set out in this Code.
- △ 280 This entry applies to safety devices for vehicles, vessels or aircraft, e.g. air bag inflators, air bag modules, seat-belt pretensioners, and pyromechanical devices, which contain dangerous goods of class 1 or of other classes, when transported as component parts and if these articles as presented for transport have been tested in accordance with test series 6(c) of part I of the *Manual of Tests and Criteria*, with no explosion of the device, no fragmentation of device casing or pressure receptacle, and no projection hazard nor thermal effect which would significantly hinder fire-fighting or emergency response efforts in the immediate vicinity. This entry does not apply to life-saving appliances described in special provision 296 (UN Nos. 2990 and 3072) or to fire suppressant dispersing devices described in special provision 407 (UN Nos. 0514 and 3559).
- 281 Transport of hay, straw or bhusa when wet, damp or contaminated with oil is prohibited and when not wet or contaminated with oil is subject to the provisions of this Code.
- 283 Articles, containing gas, intended to function as shock absorbers, including impact-energy-absorbing devices or pneumatic springs, are not subject to the provisions of this Code provided:
- .1 each article has a gas space capacity not exceeding 1.6 L and a charge pressure not exceeding 280 bar where the product of the capacity (litres) and charge pressure (bar) does not exceed 80 (i.e. 0.5 L gas space and 160 bar charge pressure, 1 L gas space and 80 bar charge pressure, 1.6 L gas space and 50 bar charge pressure, 0.28 L gas space and 280 bar charge pressure);
  - .2 each article has a minimum burst pressure of 4 times the charge pressure at 20°C for products not exceeding 0.5 L gas space capacity and 5 times charge pressure for products greater than 0.5 L gas space capacity;
  - .3 each article is manufactured from material which will not fragment upon rupture;
  - .4 each article is manufactured in accordance with a quality-assurance standard acceptable to the competent authority; and
  - .5 the design type has been subjected to a fire test demonstrating that pressure in the article is relieved by means of a fire-degradable seal or other pressure relief device, such that the article will not fragment and that the article does not rocket.

## Part 3 – Dangerous Goods List, special provisions and exceptions

- 3
- 284 An oxygen generator, chemical, containing oxidizing substances shall meet the following conditions:
- .1 the generator, when containing an explosive device, shall only be transported under this entry when excluded from class 1 in accordance with 2.1.3 of this Code;
  - .2 the generator, without its packaging, shall be capable of withstanding a 1.8 m drop test onto a rigid, non-resilient, flat and horizontal surface, in the position most likely to cause damage, without loss of its contents and without actuation; and
  - .3 when the generator is equipped with an actuating device, it shall have at least two positive means of preventing unintentional actuation.
- 286 Nitrocellulose membrane filters covered by this entry, each with a mass not exceeding 0.5 g, are not subject to the provisions of this Code when contained individually in an article or a sealed packet.
- 288 These substances shall not be classified and transported unless authorized by the competent authority on the basis of results from series 2 tests and a series 6(c) test of part I of the *Manual of Tests and Criteria* on packages as prepared for transport (see 2.1.3).
- 289 Safety devices, electrically initiated and safety devices, pyrotechnic installed in vehicles, vessels or aircraft or in completed components such as steering columns, door panels, seats, etc., are not subject to the provisions of this Code.
- 290 When this radioactive material meets the definitions and criteria of other classes or divisions as defined in part 2, it shall be classified in accordance with the following:
- .1 where the substance meets the criteria for dangerous goods in excepted quantities as set out in chapter 3.5, the packagings shall be in accordance with 3.5.2 and meet the testing requirements of 3.5.3. All other requirements applicable to radioactive material, excepted packages as set out in 1.5.1.5 shall apply without reference to the other class or division;
  - .2 where the quantity exceeds the limits specified in 3.5.1.2, the substance shall be classified in accordance with the predominant subsidiary hazard. The dangerous goods transport document shall describe the substance with the UN number and proper shipping name applicable to the other class supplemented with the name applicable to the radioactive excepted package according to column 2 in the Dangerous Goods List of chapter 3.2, and the substance shall be transported in accordance with the provisions applicable to that UN number. An example of the information shown on the dangerous goods transport document is:  
UN 1993, Flammable liquid, N.O.S. (ethanol and toluene mixture), Radioactive material, excepted package – limited quantity of material, class 3, PG II.  
In addition, the provisions of 2.7.2.4.1 shall apply;
  - .3 the provisions of chapter 3.4 for the transport of dangerous goods packed in limited quantities shall not apply to substances classified in accordance with subparagraph .2;
  - .4 when the substance meets a special provision that exempts this substance from all dangerous goods provisions of the other classes, it shall be classified in accordance with the applicable UN number of class 7 and all requirements specified in 1.5.1.5 shall apply.
- 291 Flammable liquefied gases shall be contained within refrigerating-machine components. These components shall be designed and tested to at least three times the working pressure of the machinery. The refrigerating machines and refrigerating-machine components shall be designed and constructed to contain the liquefied gas and preclude the risk of bursting or cracking of the pressure-retaining components during normal conditions of transport. Refrigerating machines and refrigerating-machine components are not subject to the provisions of this Code if they contain less than 12 kg of gas.
- 293 The following definitions apply to matches:
- .1 *Fusee matches* are matches the heads of which are prepared with a friction-sensitive igniter composition and a pyrotechnic composition which burns with little or no flame, but with intense heat;
  - .2 *Safety matches* are matches that combined with or attached to the box, book or card that can be ignited by friction only on a prepared surface;
  - .3 *“Strike anywhere” matches* are matches that can be ignited by friction on a solid surface;
  - .4 *Wax ‘Vesta’ matches* are matches that can be ignited by friction either on a prepared surface or on a solid surface.
- 294 Safety matches and wax ‘Vesta’ matches in an outer packaging not exceeding 25 kg net mass are not subject to any other provision (except marking) of this Code when packaged in accordance with packing instruction P407.
- 295 Batteries need not be individually marked and labelled if the pallet bears the appropriate mark and label.

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- 296 These entries apply to life-saving appliances such as liferafts, personal flotation devices and self-inflating slides. UN 2990 applies to self-inflating appliances. UN 3072 applies to life-saving appliances that are not self-inflating. Life-saving appliances may contain:
- .1 signal devices (class 1) which may include smoke and illumination signal flares packed in packagings that prevent them from being inadvertently activated;
  - .2 for UN 2990 only, cartridges, power device of division 1.4, compatibility group S, may be contained for purposes of the self-inflating mechanism and provided that the quantity of explosives per appliance does not exceed 3.2 g;
  - .3 class 2.2 compressed or liquefied gases;
  - △ .4 electric storage batteries (class 8) and lithium or sodium iron batteries (class 9);
  - .5 first aid kits or repair kits containing small quantities of dangerous goods (e.g. classes 3, 4.1, 5.2, 8 or 9 substances); or
  - .6 “Strike anywhere” matches packed in packagings that prevent them from being inadvertently activated.
- Life-saving appliances packed in strong rigid outer packagings with a total maximum gross mass of 40 kg, containing no dangerous goods other than class 2.2 compressed or liquefied gases with no subsidiary hazard in receptacles with a capacity not exceeding 120 mL, installed solely for the purpose of the activation of the appliance, are not subject to the provision of this Code.
- 299 Consignments of:
- .1 Cotton, dry having a density not less than 360 kg/m<sup>3</sup>;
  - .2 Flax, dry having a density not less than 400 kg/m<sup>3</sup>;
  - .3 Sisal, dry having a density not less than 360 kg/m<sup>3</sup>; and
  - .4 Tampico fibre, dry having a density not less than 360 kg/m<sup>3</sup>,
- according to ISO 8115:1986, are not subject to the provisions of this Code when transported in closed cargo transport units.
- 300 Fish meal, fish scrap and krill meal shall not be transported if the temperature at the time of loading exceeds 35°C or 5°C above the ambient temperature, whichever is higher.
- 301 This entry only applies to articles such as machinery, apparatus or devices containing dangerous goods as a residue or an integral element of the articles. It shall not be used for articles for which a proper shipping name already exists in the Dangerous Goods List. Articles transported under this entry shall only contain dangerous goods which are authorized to be transported in accordance with the provisions in chapter 3.4 (Limited quantities). The quantity of dangerous goods in articles shall not exceed the quantity specified in column 7a of the Dangerous Goods List for each item of dangerous goods contained. If the articles contains more than one item of dangerous goods, the individual dangerous goods shall be enclosed to prevent them reacting dangerously with one another during transport (see 4.1.1.6). When it is required to ensure liquid dangerous goods remain in their intended orientation, orientation arrows shall be displayed on at least two opposite vertical sides with the arrows pointing in the correct direction in accordance with 5.2.1.7.1.
- 302 Fumigated cargo transport units containing no other dangerous goods are only subject to the provisions of 5.5.2.
- 303 Receptacles shall be assigned to the class and, if any, subsidiary hazard of the gas or mixture of gases contained therein determined in accordance with the provisions of chapter 2.2.
- 304 This entry may only be used for the transport of non-activated batteries which contain dry potassium hydroxide and which are intended to be activated prior to use by the addition of an appropriate amount of water to the individual cells.
- 305 These substances are not subject to the provisions of this Code when in concentrations of not more than 50 mg/kg.
- 306 This entry may only be used for substances that are too insensitive for acceptance into class 1 when tested in accordance with test series 2 (see *Manual of Tests and Criteria*, part I).
- 307 This entry may only be used for ammonium nitrate based fertilizers. They shall be classified in accordance with the procedure as set out in the *Manual of Tests and Criteria*, part III, section 39.
- 308 Stabilization of fish meal shall be achieved to prevent spontaneous combustion by effective application of ethoxyquin, BHT (butylated hydroxytoluene) or tocopherols (also used in a blend with rosemary extract) at the time of production. The said application shall occur within twelve months prior to shipment. Fish scrap or fish meal shall contain at least 50 ppm (mg/kg) of ethoxyquin, 100 ppm (mg/kg) of BHT or 250 ppm (mg/kg) of tocopherol based antioxidant at the time of shipment.

## Part 3 – Dangerous Goods List, special provisions and exceptions

- 309 This entry applies to non-sensitized emulsions, suspensions and gels consisting primarily of a mixture of ammonium nitrate and fuel, intended to produce a Type E blasting explosive only after further processing prior to use.  
The mixture for emulsions typically has the following composition: 60–85% ammonium nitrate, 5–30% water, 2–8% fuel, 0.5–4% emulsifier agent, 0–10% soluble flame suppressants, and trace additives. Other inorganic nitrate salts may replace part of the ammonium nitrate.  
The mixture for suspensions and gels typically has the following composition: 60–85% ammonium nitrate, 0–5% sodium or potassium perchlorate, 0–17% hexamine nitrate or monomethylamine nitrate, 5–30% water, 2–15% fuel, 0.5–4% thickening agent, 0–10% soluble flame suppressants, and trace additives. Other inorganic nitrate salts may replace part of the ammonium nitrate.  
Substances shall satisfy the criteria for classification as an ammonium nitrate emulsion, suspension or gel, intermediate for blasting explosives (ANE) of Test Series 8 of the *Manual of Tests and Criteria*, part I, section 18 and be approved by the competent authority.
- △ 310 Cells or batteries from production runs of not more than 100 cells or batteries, or pre-production prototypes of cells or batteries when these prototypes are transported for testing, shall meet the provisions of 2.9.4 with the exception of 2.9.4.1, 2.9.4.5.7, 2.9.4.6.3 if applicable, 2.9.4.6.4 if applicable and 2.9.4.7.  
**Note:** “Transported for testing” includes, but is not limited to, testing described in the *Manual of Tests and Criteria*, part III, subsection 38.3, integration testing and product performance testing.  
These cells and batteries shall be packaged in accordance with packing instruction P910 of 4.1.4.1 or LP905 of 4.1.4.3, as applicable.  
Articles (UN Nos. 3537, 3538, 3540, 3541, 3546, 3547 or 3548) may contain such cells or batteries provided that the applicable parts of packing instruction P006 of 4.1.4.1 or LP03 of 4.1.4.3, as applicable, are met.  
The transport document shall include the following statement: “Transport in accordance with special provision 310”.  
Damaged or defective cells, batteries, or cells and batteries contained in equipment shall be transported in accordance with special provision 376.  
Cells, batteries or cells and batteries contained in equipment transported for disposal or recycling may be packaged in accordance with special provision 377 and packing instruction P909 of 4.1.4.1.
- 311 Substances shall not be transported under this entry unless approved by the competent authority on the basis of the results of appropriate tests according to part I of the *Manual of Tests and Criteria*. Packaging shall ensure that the percentage of diluent does not fall below that stated in the competent authority approval at any time during transport.
- 314 .1 These substances are liable to exothermic decomposition at elevated temperatures. Decomposition can be initiated by heat or by impurities (e.g. powdered metals (iron, manganese, cobalt, magnesium) and their compounds).  
.2 During the course of transport, these substances shall be shaded from direct sunlight and all sources of heat and be placed in adequately ventilated areas.
- 315 This entry shall not be used for class 6.1 substances which meet the inhalation toxicity criteria for packing group I described in 2.6.2.2.4.3.
- 316 This entry applies only to calcium hypochlorite, dry, when transported in non-friable tablet form.
- 317 “Fissile-excepted” applies only to those fissile materials and packages containing fissile material which are excepted in accordance with 2.7.2.3.5.
- 318 For the purposes of documentation, the proper shipping name shall be supplemented with the technical name (see 3.1.2.8). Technical names need not be shown on the package. When the infectious substances to be transported are unknown, but suspected of meeting the criteria for inclusion in category A and assignment to UN 2814 or UN 2900, the words “suspected category A infectious substance” shall be shown, in parentheses, following the proper shipping name on the transport document, but not on the outer packagings.
- 319 Substances packed and packages marked in accordance with packing instruction P650 are not subject to any other provisions of this Code.
- 321 These storage systems shall always be considered as containing hydrogen.
- 322 When transported in non-friable tablet form, these goods are assigned to packing group III.
- 323 *Deleted.*
- 324 This substance needs to be stabilized when in concentrations of not more than 99%.
- 325 In the case of non-fissile or fissile-excepted uranium hexafluoride, the material shall be classified under UN 2978.
- 326 In the case of fissile uranium hexafluoride, the material shall be classified under UN 2977.

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- 327 Waste aerosols and waste gas cartridges consigned in accordance with 5.4.1.4.3.3 may be transported under UN 1950 or UN 2037, as appropriate, for the purposes of reprocessing or disposal. They need not be protected against movement and inadvertent discharge provided that measures to prevent dangerous build-up of pressure and dangerous atmospheres are addressed. Waste aerosols, other than those leaking or severely deformed, shall be packed in accordance with packing instruction P207 and special provision PP87, or packing instruction LP200 and special packing provision L2. Waste gas cartridges, other than those leaking or severely deformed, shall be packed in accordance with packing instruction P003 and special packing provisions PP17 and PP96, or packing instruction LP200 and special packing provision L2. Leaking or severely deformed aerosols and gas cartridges shall be transported in salvage pressure receptacles or salvage packagings provided appropriate measures are taken to ensure there is no dangerous build-up of pressure. Waste aerosols and waste gas cartridges shall not be transported in closed freight containers.
- Waste gas cartridges that were filled with gases of class 2.2 and have been pierced are not subject to this Code.
- 328 This entry applies to fuel cell cartridges, including when contained in equipment or packed with equipment. Fuel cell cartridges installed in or integral to a fuel cell system are regarded as contained in equipment. "Fuel cell cartridge" means an article that stores fuel for discharge into the fuel cell through a valve(s) that controls the discharge of fuel into the fuel cell. Fuel cell cartridges, including when contained in equipment, shall be designed and constructed to prevent fuel leakage under normal conditions of transport.
- Fuel cell cartridge design types using liquids as fuels shall pass an internal pressure test at a pressure of 100 kPa (gauge) without leakage.
- Except for fuel cell cartridges containing hydrogen in metal hydride, which shall be in compliance with special provision 339, each fuel cell cartridge design type shall be shown to pass a 1.2 m drop test onto an unyielding surface, in the orientation most likely to result in failure of the containment system, with no loss of contents.
- △ When lithium metal, lithium ion or sodium ion batteries are contained in the fuel cell system, the consignment shall be consigned under this entry and under the appropriate entries for UN 3091 LITHIUM METAL BATTERIES CONTAINED IN EQUIPMENT, UN 3481 LITHIUM ION BATTERIES CONTAINED IN EQUIPMENT or UN 3552 SODIUM ION BATTERIES CONTAINED IN EQUIPMENT.
- 332 Magnesium nitrate hexahydrate is not subject to the provisions of this Code.
- 333 Ethanol and gasoline, motor spirit or petrol mixtures for use in spark-ignition engines (e.g. in automobiles, stationary engines and other engines) shall be assigned to this entry regardless of variations in volatility.
- 334 A fuel cell cartridge may contain an activator provided it is fitted with two independent means of preventing unintended mixing with the fuel during transport.
- 335 Mixtures of solids which are not subject to the provisions of this Code and environmentally hazardous liquids assigned to UN 3082 may be classified and transported as UN 3077, provided there is no free liquid visible at the time the substance is loaded or at the time the packaging or cargo transport unit is closed. If free liquid is visible at the time the mixture is loaded or at the time the packaging or cargo transport unit is closed, the mixture shall be classified as UN 3082. Each cargo transport unit shall be leakproof when used as a bulk container. Sealed packets and articles containing less than 10 mL of an environmentally hazardous liquid assigned to UN 3082, absorbed into a solid material but with no free liquid in the packet or article, or containing less than 10 g of an environmentally hazardous solid assigned to UN 3077, are not subject to the provisions of this Code.
- 338 Each fuel cell cartridge transported under this entry and designed to contain a liquefied flammable gas shall:
- .1 be capable of withstanding, without leakage or bursting, a pressure of at least two times the equilibrium pressure of the contents at 55°C;
  - .2 not contain more than 200 mL liquefied flammable gas, the vapour pressure of which shall not exceed 1 000 kPa at 55°C; and
  - .3 pass the hot water bath test prescribed in 6.2.4.1 of chapter 6.2.
- 339 Fuel cell cartridges containing hydrogen in a metal hydride transported under this entry shall have a water capacity less than or equal to 120 mL. The pressure in the fuel cell cartridge shall not exceed 5 MPa at 55°C. The design type shall withstand, without leaking or bursting, a pressure of two (2) times the design pressure of the cartridge at 55°C or 200 kPa more than the design pressure of the cartridge at 55°C, whichever is greater. The pressure at which this test is conducted is referred to in the Drop Test and the Hydrogen Cycling Test as the "minimum shell burst pressure".

**Part 3 – Dangerous Goods List, special provisions and exceptions**

3

Fuel cell cartridges shall be filled in accordance with procedures provided by the manufacturer. The manufacturer shall provide the following information with each fuel cell cartridge:

- .1 Inspection procedures to be carried out before initial filling and before refilling of the fuel cell cartridge;
- .2 Safety precautions and potential hazards to be aware of;
- .3 Method for determining when the rated capacity has been achieved;
- .4 Minimum and maximum pressure range;
- .5 Minimum and maximum temperature range; and
- .6 Any other requirements to be met for initial filling and refilling, including the type of equipment to be used for initial filling and refilling.

The fuel cell cartridges shall be designed and constructed to prevent fuel leakage under normal conditions of transport. Each cartridge design type, including cartridges integral to a fuel cell, shall be subjected to and shall pass the following tests:

**Drop test**

A 1.8 m drop test onto an unyielding surface in four different orientations:

- .1 Vertically, on the end containing the shut-off valve assembly;
- .2 Vertically, on the end opposite to the shut-off valve assembly;
- .3 Horizontally, onto a steel apex with a diameter of 38 mm, with the steel apex in the upward position; and
- .4 At a 45° angle on the end containing the shut-off valve assembly.

There shall be no leakage, determined by using a soap bubble solution or other equivalent means on all possible leak locations, when the cartridge is charged to its rated charging pressure. The fuel cell cartridge shall then be hydrostatically pressurized to destruction. The recorded burst pressure shall exceed 85% of the minimum shell burst pressure.

**Fire test**

A fuel cell cartridge filled to rated capacity with hydrogen shall be subjected to a fire engulfment test. The cartridge design, which may include a vent feature integral to it, is deemed to have passed the fire test if:

- .1 The internal pressure vents to zero gauge pressure without rupture of the cartridge; or
- .2 The cartridge withstands the fire for a minimum of 20 minutes without rupture.

**Hydrogen cycling test**

This test is intended to ensure that a fuel cell cartridge design stress limits are not exceeded during use.

The fuel cell cartridge shall be cycled from not more than 5% rated hydrogen capacity to not less than 95% rated hydrogen capacity and back to not more than 5% rated hydrogen capacity. The rated charging pressure shall be used for charging and temperatures shall be held within the operating temperature range. The cycling shall be continued for at least 100 cycles.

Following the cycling test, the fuel cell cartridge shall be charged and the water volume displaced by the cartridge shall be measured. The cartridge design is deemed to have passed the hydrogen cycling test if the water volume displaced by the cycled cartridge does not exceed the water volume displaced by an uncycled cartridge charged to 95% rated capacity and pressurized to 75% of its minimum shell burst pressure.

**Production leak test**

Each fuel cell cartridge shall be tested for leaks at 15°C ± 5°C, while pressurized to its rated charging pressure. There shall be no leakage, determined by using a soap bubble solution or other equivalent means on all possible leak locations.

Each fuel cell cartridge shall be permanently marked with the following information:

- .1 The rated charging pressure in megapascals (MPa);
- .2 The manufacturer's serial number of the fuel cell cartridges or unique identification number; and
- .3 The date of expiry based on the maximum service life (year in four digits; month in two digits).

340 Chemical kits, first aid kits and polyester resin kits containing dangerous substances in inner packagings which do not exceed the quantity limits for excepted quantities applicable to individual substances as specified in column 7b of the Dangerous Goods List may be transported in accordance with chapter 3.5. Class 5.2 substances, although not individually authorized as excepted quantities in the Dangerous Goods List, are authorized in such kits and are assigned code E2 (see 3.5.1.2).

341 Bulk transport of infectious substances in BK2 bulk containers is only permitted for infectious substances contained in animal material as defined in 1.2.1 (see 4.3.2.4.1).

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- 342 Glass inner receptacles (such as ampoules or capsules) intended only for use in sterilization devices, when containing less than 30 mL of ethylene oxide per inner packaging with not more than 300 mL per outer packaging, may be transported in accordance with the provisions in chapter 3.5, irrespective of the indication of “E0” in column 7b of the Dangerous Goods List provided that:
- .1 After filling, each glass inner receptacle has been determined to be leak tight by placing the glass inner receptacle in a hot water bath at a temperature, and for a period of time, sufficient to ensure that an internal pressure equal to the vapour pressure of ethylene oxide at 55°C is achieved. Any glass inner receptacle showing evidence of leakage, distortion or other defect under this test shall not be transported under the terms of this special provision;
  - .2 In addition to the packaging required by 3.5.2, each glass inner receptacle is placed in a sealed plastics bag compatible with ethylene oxide and capable of containing the contents in the event of breakage or leakage of the glass inner receptacle; and
  - .3 Each glass inner receptacle is protected by a means of preventing puncture of the plastics bag (e.g. sleeves or cushioning) in the event of damage to the packaging (e.g. by crushing).
- 343 This entry applies to crude oil containing hydrogen sulphide in sufficient concentration that vapours evolved from the crude oil can present an inhalation hazard. The packing group assigned shall be determined by the flammability hazard and inhalation hazard, in accordance with the degree of danger presented.
- 344 The provisions of 6.2.4 shall be met.
- 345 This gas contained in open cryogenic receptacles with a maximum capacity of 1 L constructed with glass double walls having the space between the inner and outer wall evacuated (vacuum insulated) is not subject to the provisions of this Code provided each receptacle is transported in an outer packaging with suitable cushioning or absorbent materials to protect it from impact damage.
- 346 Open cryogenic receptacles conforming to the requirements of packing instruction P203 and containing no dangerous goods except for UN 1977, nitrogen, refrigerated liquid, which is fully absorbed in a porous material, are not subject to any other provisions of this Code.
- 347 This entry shall only be used if the results of test series 6(d) of part I of the *Manual of Tests and Criteria* have demonstrated that any hazardous effects arising from functioning are confined within the package.
- △ 348 Lithium batteries manufactured after 31 December 2011 and sodium ion batteries manufactured after 31 December 2025 shall be marked with the Watt hour rating on the outside case.
- 349 Mixtures of a hypochlorite with an ammonium salt are not to be accepted for transport. UN 1791 hypochlorite solution is a substance of class 8.
- 350 Ammonium bromate and its aqueous solutions and mixtures of a bromate with an ammonium salt are not to be accepted for transport.
- 351 Ammonium chlorate and its aqueous solutions and mixtures of a chlorate with an ammonium salt are not to be accepted for transport.
- 352 Ammonium chlorite and its aqueous solutions and mixtures of a chlorite with an ammonium salt are not to be accepted for transport.
- 353 Ammonium permanganate and its aqueous solutions and mixtures of a permanganate with an ammonium salt are not to be accepted for transport.
- 354 This substance is toxic by inhalation.
- 355 Oxygen cylinders for emergency use transported under this entry may include installed actuating cartridges (cartridges, power device of class 1.4, compatibility group C or S), without changing the classification of class 2.2 provided the total quantity of deflagrating (propellant) explosives does not exceed 3.2 g per oxygen cylinder. The cylinders with the installed actuating cartridges as prepared for transport shall have an effective means of preventing inadvertent activation.
- 356 Metal hydride storage systems installed in vehicles, vessels, machinery, engines or aircraft or in completed components or intended to be installed in vehicles, vessels, machinery, engines or aircraft shall be approved by the competent authority before acceptance for transport. The transport document shall include an indication that the package was approved by the competent authority or a copy of the competent authority approval shall accompany each consignment.
- 357 Petroleum crude oil containing hydrogen sulphide in sufficient concentration that vapours evolved from the crude oil can present an inhalation hazard shall be consigned under the entry UN 3494 PETROLEUM SOUR CRUDE OIL, FLAMMABLE, TOXIC.
- 358 Nitroglycerin solution in alcohol with more than 1% but not more than 5% nitroglycerin may be classified in class 3 and assigned to UN 3064 provided all the requirements of packing instruction P300 are complied with.

## Part 3 – Dangerous Goods List, special provisions and exceptions

3

- 359 Nitroglycerin solution in alcohol with more than 1% but not more than 5% nitroglycerin shall be classified in class 1 and assigned to UN 0144 if not all the requirements of packing instruction P300 are complied with.
- △ 360 Vehicles only powered by lithium metal, lithium ion or sodium ion batteries shall be assigned to the entries UN 3556 VEHICLE, LITHIUM ION BATTERY POWERED or UN 3557 VEHICLE, LITHIUM METAL BATTERY POWERED or UN 3558 VEHICLE, SODIUM ION BATTERY POWERED, as applicable. Lithium batteries installed in cargo transport units, designed only to provide power external to the transport unit shall be assigned to entry UN 3536 LITHIUM BATTERIES INSTALLED IN CARGO TRANSPORT UNIT.
- 361 This entry applies to electric double layer capacitors with an energy storage capacity greater than 0.3 Wh. Capacitors with an energy storage capacity of 0.3 Wh or less are not subject to the provisions of this Code. Energy storage capacity means the energy held by a capacitor, as calculated using the nominal voltage and capacitance. All capacitors to which this entry applies, including capacitors containing an electrolyte that does not meet the classification criteria of any class or division of dangerous goods, shall meet the following conditions:
- .1 Capacitors not installed in equipment shall be transported in an uncharged state. Capacitors installed in equipment shall be transported either in an uncharged state or protected against short circuit;
  - .2 Each capacitor shall be protected against a potential short circuit hazard in transport as follows:
    - .1 when a capacitor's energy storage capacity is less than or equal to 10 Wh or when the energy storage capacity of each capacitor in a module is less than or equal to 10 Wh, the capacitor or module shall be protected against short circuit or be fitted with a metal strap connecting the terminals; and
    - .2 when the energy storage capacity of a capacitor or a capacitor in a module is more than 10 Wh, the capacitor or module shall be fitted with a metal strap connecting the terminals;
  - .3 Capacitors containing dangerous goods shall be designed to withstand a 95 kPa pressure differential;
  - .4 Capacitors shall be designed and constructed to safely relieve pressure that may build up in use, through a vent or a weak point in the capacitor casing. Any liquid which is released upon venting shall be contained by the packaging or by the equipment in which a capacitor is installed; and
  - .5 Capacitors manufactured after 31 December 2013 shall be marked with the energy storage capacity in Wh.
- Capacitors containing an electrolyte not meeting the classification criteria of any class or division of dangerous goods, including when installed in equipment, are not subject to other provisions of this Code.
- Capacitors containing an electrolyte meeting the classification criteria of any class or division of dangerous goods, with an energy storage capacity of 10 Wh or less are not subject to other provisions of this Code when they are capable of withstanding a 1.2 m drop test unpackaged on an unyielding surface without loss of contents.
- Capacitors containing an electrolyte meeting the classification criteria of any class or division of dangerous goods that are not installed in equipment and with an energy storage capacity of more than 10 Wh are subject to the provisions of this Code.
- Capacitors installed in the equipment and containing an electrolyte meeting the classification criteria of any class or division of dangerous goods, are not subject to other provisions of this Code provided the equipment is packaged in a strong outer packaging constructed of suitable material and of adequate strength and design, in relation to the packaging's intended use and in such a manner as to prevent accidental functioning of capacitors during transport. Large robust equipment containing capacitors may be offered for transport unpackaged or on pallets when capacitors are afforded equivalent protection by the equipment in which they are contained.
- Note:** Capacitors which by design maintain a terminal voltage (e.g. asymmetrical capacitors) do not belong to this entry.
- 362 This entry applies to liquids, pastes or powders, pressurized with a propellant which meets the definition of a gas in 2.2.1.1 and 2.2.1.2.1 or 2.2.1.2.2.
- Note:** A chemical under pressure in an aerosol dispenser shall be transported under UN 1950.
- The following provisions shall apply:
- .1 the chemical under pressure shall be classified based on the hazard characteristics of the components in the different states:
    - the propellant;

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- the liquid; or
- the solid.

If one of these components, which can be a pure substance or a mixture, needs to be classified as flammable, the chemical under pressure shall be classified as flammable in class 2.1. Flammable components are flammable liquids and liquid mixtures, flammable solids and solid mixtures or flammable gases and gas mixtures meeting the following criteria:

- .1 a flammable liquid is a liquid having a flashpoint of not more than 93°C;
- .2 a flammable solid is a solid which meets the criteria in 2.4.2.2 of this Code;
- .3 a flammable gas is a gas which meets the criteria in 2.2.2.1 of this Code;
- .2 gases of class 2.3 and gases with a subsidiary hazard of 5.1 shall not be used as a propellant in a chemical under pressure;
- .3 where the liquid or solid components are classified as dangerous goods of class 6.1, packing groups II or III, or class 8, packing groups II or III, the chemical under pressure shall be assigned a subsidiary hazard of class 6.1 or class 8 and the appropriate UN number shall be assigned. Components classified in class 6.1, packing group I, or class 8, packing group I, shall not be used for transport under this proper shipping name;
- .4 in addition, chemicals under pressure with components meeting the properties of: class 1, explosives; class 3, liquid desensitized explosives; class 4.1, self-reactive substances and solid desensitized explosives; class 4.2, substances liable to spontaneous combustion; class 4.3, substances which, in contact with water, emit flammable gases; class 5.1, oxidizing substances; class 5.2, organic peroxides; class 6.2, Infectious substances or class 7, Radioactive material, shall not be used for transport under this proper shipping name;
- .5 substances to which PP86 or TP7 are assigned in column 9 and column 14 of the Dangerous Goods List in chapter 3.2 and therefore require air to be eliminated from the vapour space, shall not be used for transport under this UN number but shall be transported under their respective UN numbers as listed in the Dangerous Goods List of chapter 3.2.

363 This entry may only be used when the conditions of this special provision are met. No other provisions of this Code apply, except for special provision 972, chapter 5.4, part 7 and column 16a and 16b of the Dangerous Goods List.

- .1 This entry applies to engines or machinery, powered by fuels classified as dangerous goods via internal combustion systems or fuel cells (e.g. combustion engines, generators, compressors, turbines, heating units, etc.), except those which are assigned under UN 3166 or UN 3363;
- .2 Engines or machinery which are empty of liquid or gaseous fuels and which do not contain other dangerous goods, are not subject to this Code.

**Note 1:** An engine or machinery is considered to be empty of liquid fuel when the liquid fuel tank has been drained and the engine or machinery cannot be operated due to a lack of fuel. Engine or machinery components such as fuel lines, fuel filters and injectors do not need to be cleaned, drained or purged to be considered empty of liquid fuels. In addition, the liquid fuel tank does not need to be cleaned or purged.

**Note 2:** An engine or machinery is considered to be empty of gaseous fuels when the gaseous fuel tanks are empty of liquid (for liquefied gases), the positive pressure in the tanks does not exceed 2 bar and the fuel shut-off or isolation valve is closed and secured.

- .3 Engines and machinery containing fuels meeting the classification criteria of class 3, shall be consigned under the entries UN No. 3528 ENGINE, INTERNAL COMBUSTION, FLAMMABLE LIQUID POWERED or UN 3528 ENGINE, FUEL CELL, FLAMMABLE LIQUID POWERED or UN 3528 MACHINERY, INTERNAL COMBUSTION, FLAMMABLE LIQUID POWERED or UN 3528 MACHINERY, FUEL CELL, FLAMMABLE LIQUID POWERED, as appropriate.
- .4 Engines and machinery containing fuels meeting the classification criteria of class 2.1, shall be consigned under the entries UN 3529 ENGINE, INTERNAL COMBUSTION, FLAMMABLE GAS POWERED or UN 3529 ENGINE, FUEL CELL, FLAMMABLE GAS POWERED or UN 3529 MACHINERY, INTERNAL COMBUSTION, FLAMMABLE GAS POWERED or UN 3529 MACHINERY, FUEL CELL, FLAMMABLE GAS POWERED, as appropriate.

Engines and machinery powered by both a flammable gas and a flammable liquid shall be consigned under the appropriate UN 3529 entry.

- .5 Engines and machinery containing liquid fuels meeting the classification criteria of 2.9.3 for environmentally hazardous substances and not meeting the classification criteria of any other class or division, shall be consigned under the entries UN 3530 ENGINE, INTERNAL COMBUSTION or UN 3530 MACHINERY, INTERNAL COMBUSTION, as appropriate.
- .6 Engines or machinery may contain other dangerous goods than fuels (e.g. batteries, fire extinguishers, compressed gas accumulators or safety devices) required for their functioning or

## Part 3 – Dangerous Goods List, special provisions and exceptions

3

safe operation without being subject to any additional requirements for these other dangerous goods, unless otherwise specified in this Code.

- .7 The engine or machinery, including the means of containment containing dangerous goods, shall be in compliance with the construction requirements specified by the competent authority.
- .8 Any valves or openings (e.g. venting devices) shall be closed during transport.
- .9 The engines or machinery shall be oriented to prevent inadvertent leakage of dangerous goods and secured by means capable of restraining the engines or machinery to prevent any movement during transport which would change the orientation or cause them to be damaged.
- .10 For UN 3528 and UN 3530:
- where the engine or machinery contains more than 60 L of liquid fuel and has a capacity of not more than 450 L, the labelling requirements of 5.2.2 shall apply;
  - where the engine or machinery contains more than 60 L of liquid fuel and has a capacity of more than 450 L but not more than 3,000 L, it shall be labelled on two opposing sides in accordance with 5.2.2;
  - where the engine or machinery contains more than 60 L of liquid fuel and has a capacity of more than 3,000 L, it shall be placarded on two opposing sides. Placards shall correspond to the class indicated in column 3 of the Dangerous Goods List of chapter 3.2 and shall conform to the specifications given in 5.3.1.2.1;
  - in addition to the above requirements, for UN 3530, where the engine or machinery contains more than 60 L of liquid fuel and the capacity does not exceed 3,000 L, the marking requirements of 5.2.1.6 apply; and where the engine or machinery contains more than 60 L of liquid fuel and the capacity exceeds 3,000 L, the marking requirements of 5.3.2.3.2 apply.
- .11 For UN 3529:
- where the fuel tank of the engine or machinery has a water capacity of not more than 450 L, the labelling requirements of 5.2.2 shall apply;
  - where the fuel tank of the engine or machinery has a water capacity of more than 450 L but not more than 1,000 L, it shall be labelled on two opposing sides in accordance with 5.2.2; and
  - where the fuel tank of the engine or machinery has a water capacity of more than 1,000 L, it shall be placarded on two opposing sides. Placards shall correspond to the class indicated in Column 3 of the Dangerous Goods List in Chapter 3.2 and shall conform to the specifications given in 5.3.1.2.1.
- .12 The transport document shall contain the following additional statement “Transport in accordance with special provision 363”.
- .13 The requirements specified in packing instruction P005 of 4.1.4.1 shall be met.
- 364 This article may only be transported under the provisions of chapter 3.4 if, as presented for transport, the package is capable of passing the test in accordance with test series 6(d) of part I of the *Manual of Tests and Criteria* as determined by the competent authority.
- △ 365 For manufactured instruments and articles containing mercury or gallium, see UN Nos. 3506 or 3554, as appropriate.
- △ 366 Manufactured instruments and articles containing not more than 1 kg of mercury or gallium are not subject to the provisions of this Code.
- 367 For the purposes of documentation and package marking:
- The proper shipping name “PAINT RELATED MATERIAL” may be used for consignments of packages containing “PAINT” and “PAINT RELATED MATERIAL” in the same package;
- The proper shipping name “PAINT RELATED MATERIAL, CORROSIVE, FLAMMABLE” may be used for consignments of packages containing “PAINT, CORROSIVE, FLAMMABLE” and “PAINT RELATED MATERIAL, CORROSIVE, FLAMMABLE” in the same package;
- The proper shipping name “PAINT RELATED MATERIAL, FLAMMABLE, CORROSIVE” may be used for consignments of packages containing “PAINT, FLAMMABLE, CORROSIVE” and “PAINT RELATED MATERIAL, FLAMMABLE, CORROSIVE” in the same package; and
- The proper shipping name “PRINTING INK RELATED MATERIAL” may be used for consignments of packages containing “PRINTING INK” and “PRINTING INK RELATED MATERIAL” in the same package.
- 368 In the case of non-fissile or fissile-excepted uranium hexafluoride, the material shall be classified under UN 3507 or UN 2978.
- 369 In accordance with 2.0.3.5, this radioactive material in an excepted package possessing toxic and corrosive properties is classified in class 6.1 with radioactivity and corrosivity subsidiary hazards.

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

Uranium hexafluoride may be classified under this entry only if the conditions of 2.7.2.4.1.2, 2.7.2.4.1.5, 2.7.2.4.5.2 and, for fissile-excepted material, of 2.7.2.3.5 are met.

In addition to the provisions applicable to the transport of class 6.1 substances with a corrosivity subsidiary hazard, the provisions of 5.1.3.2, 5.1.5.2.2, 5.1.5.4.1.2, 7.1.4.5.9, 7.1.4.5.10, 7.1.4.5.12, and 7.8.4.1 to 7.8.4.6 shall apply.

No class 7 label is required to be displayed.

- 370 This entry only applies to ammonium nitrate that meets one of the following criteria:
- ammonium nitrate with more than 0.2% combustible substances, including any organic substance calculated as carbon, to the exclusion of any added substance; or
  - ammonium nitrate with not more than 0.2% combustible substances, including any organic substance calculated as carbon, to the exclusion of any added substance, that gives a positive result when tested in accordance with test series 2 (see *Manual of Tests and Criteria*, part I). See also UN 1942.

This entry shall not be used for ammonium nitrate for which a proper shipping name already exists in the Dangerous Goods List of chapter 3.2 including ammonium nitrate mixed with fuel oil (ANFO) or any of the commercial grades of ammonium nitrate.

- 371 .1 This entry also applies to articles, containing a small pressure receptacle with a release device. Such articles shall comply with the following requirements:
- .1 the water capacity of the pressure receptacle shall not exceed 0.5 L and the working pressure shall not exceed 25 bar at 15°C;
  - .2 the minimum burst pressure of the pressure receptacle shall be at least four times the pressure of the gas at 15°C;
  - .3 each article shall be manufactured in such a way that unintentional firing or release is avoided under normal conditions of handling, packing, transport and use. This may be fulfilled by an additional locking device linked to the activator;
  - .4 each article shall be manufactured in such a way as to prevent hazardous projections of the pressure receptacle or parts of the pressure receptacle;
  - .5 each pressure receptacle shall be manufactured from material which will not fragment upon rupture;
  - △ .6 the design type of the article shall be subjected to a fire test. For this test, the provisions of paragraphs 16.6.1.2 except subparagraph (g), 16.6.1.3.1 to 16.6.1.3.4, 16.6.1.3.6, 16.6.1.3.7(b) and 16.6.1.3.8 of the *Manual of Tests and Criteria* shall be applied. It shall be demonstrated that the article relieves its pressure by means of a fire degradable seal or other pressure relief device, in such a way that the pressure receptacle will not fragment and that the article or fragments of the article do not rocket more than 10 m; and
  - .7 the design type of the article shall be subjected to the following test. A stimulating mechanism shall be used to initiate one article in the middle of the packaging. There shall be no hazardous effects outside the package such as disruption of the package, metal fragments or a receptacle which passes through the packaging.
- .2 The manufacturer shall produce technical documentation of the design type, manufacture as well as the tests and their results. The manufacturer shall apply procedures to ensure that articles produced in series are made of good quality, conform to the design type and are able to meet the requirements in .1. The manufacturer shall provide such information to the competent authority on request.

- 372 This entry applies to asymmetric capacitors with an energy storage capacity greater than 0.3 Wh. Capacitors with an energy storage capacity of 0.3 Wh or less are not subject to the provisions of this Code.

Energy storage capacity means the energy stored in a capacitor, as calculated according to the following equation:

$$\text{Wh} = \frac{\frac{1}{2} C_N (U_R^2 - U_L^2)}{3,600}$$

using the nominal capacitance ( $C_N$ ), rated voltage ( $U_R$ ) and rated lower limit voltage ( $U_L$ ).

All asymmetric capacitors to which this entry applies shall meet the following conditions:

- .1 capacitors or modules shall be protected against short circuit;
- .2 capacitors shall be designed and constructed to safely relieve pressure that may build up in use, through a vent or a weak point in the capacitor casing. Any liquid which is released upon venting shall be contained by packaging or by equipment in which a capacitor is installed;
- .3 capacitors manufactured after 31 December 2015 shall be marked with the energy storage capacity in Wh;

- .4 capacitors containing an electrolyte meeting the classification criteria of any class or division of dangerous goods shall be designed to withstand a 95 kPa pressure differential;

Capacitors containing an electrolyte not meeting the classification criteria of any class or division of dangerous goods, including when configured in a module or when installed in equipment are not subject to other provisions of this Code. Capacitors containing an electrolyte meeting the classification criteria of any class or division of dangerous goods, with an energy storage capacity of 20 Wh or less, including when configured in a module, are not subject to other provisions of this Code when the capacitors are capable of withstanding a 1.2 m drop test unpackaged on an unyielding surface without loss of contents.

Capacitors containing an electrolyte meeting the classification criteria of any class or division of dangerous goods that are not installed in equipment and with an energy storage capacity of more than 20 Wh are subject to this Code.

Capacitors installed in equipment and containing an electrolyte meeting the classification criteria of any class or division of dangerous goods, are not subject to other provisions of this Code provided that the equipment is packaged in a strong outer packaging constructed of suitable material, and of adequate strength and design, in relation to the packaging's intended use and in such a manner as to prevent accidental functioning of capacitors during transport. Large robust equipment containing capacitors may be offered for transport unpackaged or on pallets when capacitors are afforded equivalent protection by the equipment in which they are contained.

**Note:** Notwithstanding the provisions of this special provision, nickel-carbon asymmetric capacitors containing class 8 alkaline electrolytes shall be transported as UN 2795, BATTERIES, WET, FILLED WITH ALKALI, electric storage.

- 373 Neutron radiation detectors containing non-pressurized boron trifluoride gas may be transported under this entry provided that the following conditions are met:

- .1 Each radiation detector shall meet the following conditions:
- .1 the pressure in each detector shall not exceed 105 kPa absolute at 20°C;
  - .2 the amount of gas shall not exceed 13 g per detector;
  - .3 each detector shall be manufactured under a registered quality assurance programme;
- Note:** The application of ISO 9001:2008 may be considered acceptable for this purpose.
- .4 each neutron radiation detector shall be of welded metal construction with brazed metal to ceramic feed through assemblies. These detectors shall have a minimum burst pressure of 1,800 kPa as demonstrated by design type qualification testing; and
  - .5 each detector shall be tested to a  $1 \times 10^{-10}$  cm<sup>3</sup>/s leak tightness standard before filling.
- .2 Radiation detectors transported as individual components shall be transported as follows:
- .1 detectors shall be packed in a sealed intermediate plastics liner with sufficient absorbent or adsorbent material to absorb or adsorb the entire gas contents;
  - .2 they shall be packed in strong outer packaging. The completed package shall be capable of withstanding a 1.8 m drop test without leakage of gas contents from detectors; and
  - .3 the total amount of gas from all detectors per outer packaging shall not exceed 52 g.
- .3 Completed neutron radiation detection systems containing detectors meeting the conditions of .1 shall be transported as follows:
- .1 the detectors shall be contained in a strong sealed outer casing;
  - .2 the casing shall contain sufficient absorbent or adsorbent material to absorb or adsorb the entire gas contents; and
  - .3 the completed systems shall be packed in strong outer packagings capable of withstanding a 1.8 m drop test without leakage unless a system's outer casing affords equivalent protection.

Packing instruction P200 of 4.1.4.1 is not applicable.

The transport document shall include the statement "Transport in accordance with special provision 373".

Neutron radiation detectors containing not more than 1 g of boron trifluoride, including those with solder glass joints, are not subject to this Code provided they meet the requirements in paragraph .1 and are packed in accordance with paragraph .2. Radiation detection systems containing such detectors are not subject to this Code provided they are packed in accordance with paragraph .3.

Neutron radiation detectors shall be stowed in accordance with stowage Category A.

- 375 These substances, when carried in single or combination packagings containing a net quantity per single or inner packaging of 5 L or less for liquids or having a net mass per single or inner packaging of 5 kg or less for solids, are not subject to any other provisions of the present Code, provided the packagings meet the general provisions of 4.1.1.1, 4.1.1.2 and 4.1.1.4 to 4.1.1.8.

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- △ 376 Lithium metal, lithium ion or sodium ion cells or batteries identified as being damaged or defective such that they do not conform to the type tested according to the applicable provisions of the *Manual of Tests and Criteria* shall comply with the requirements of this special provision.
- For the purposes of this special provision, these may include, but are not limited to:
- Cells or batteries identified as being defective for safety reasons;
  - Cells or batteries that have leaked or vented;
  - Cells or batteries that cannot be diagnosed prior to transport; or
  - Cells or batteries that have sustained physical or mechanical damage.
- Note:** In assessing a cell or battery as damaged or defective, an assessment or evaluation shall be performed based on safety criteria from the cell, battery or product manufacturer or by a technical expert with knowledge of the cell's or battery's safety features. An assessment or evaluation may include, but is not limited to, the following criteria:
- .1 acute hazard, such as gas, fire or electrolyte leaking;
  - .2 the use or misuse of the cell or battery;
  - .3 signs of physical damage, such as deformation to cell or battery casing, or colours on the casing;
  - .4 external and internal short circuit protection, such as voltage or isolation measures;
  - .5 the condition of the cell or battery safety features; or
  - .6 damage to any internal safety components, such as the battery management system.
- △ Cells and batteries shall be transported according to the provisions applicable to UN 3090, UN 3091, UN 3480, UN 3481, UN 3551 and UN 3552, as appropriate, except special provision 230 and as otherwise stated in this special provision.
- Cells and batteries shall be packed in accordance with packing instructions P908 of 4.1.4.1 or LP904 of 4.1.4.3, as applicable.
- Cells and batteries identified as damaged or defective and liable to rapidly disassemble, dangerously react, produce a flame or a dangerous evolution of heat or a dangerous emission of toxic, corrosive or flammable gases or vapours under normal conditions of transport shall be packed and transported in accordance with packing instruction P911 of 4.1.4.1 or LP906 of 4.1.4.3, as applicable. Alternative packing and/or transport conditions may be authorized by the competent authority.
- Packages shall be marked "DAMAGED/DEFECTIVE" in addition to the proper shipping name, as stated in 5.2.1.
- The transport document shall include the following statement "Transport in accordance with special provision 376".
- If applicable, a copy of the competent authority approval shall accompany the transport.
- △ 377 Lithium metal, lithium ion and sodium ion cells and batteries and equipment containing such cells and batteries transported for disposal or recycling, either packed together with or packed without non-lithium or non-sodium ion batteries, may be packaged in accordance with packing instruction P909 of 4.1.4.1.
- △ These cells and batteries are not subject to the requirements of section 2.9.4 or 2.9.5.
- △ Packages shall be marked "LITHIUM BATTERIES FOR DISPOSAL", "SODIUM ION BATTERIES FOR DISPOSAL", "LITHIUM BATTERIES FOR RECYCLING", or "SODIUM ION BATTERIES FOR RECYCLING", as appropriate.
- Identified damaged or defective batteries shall be transported in accordance with special provision 376.
- The transport document shall include the following statement: "Transport in accordance with special provision 377".
- 378 Radiation detectors containing this gas in non-refillable pressure receptacles not meeting the requirements of chapter 6.2 and packing instruction P200 of 4.1.4.1 may be transported under this entry provided:
- .1 The working pressure in each receptacle does not exceed 50 bar;
  - .2 The receptacle capacity does not exceed 12 L;
  - .3 Each receptacle has a minimum burst pressure of at least 3 times the working pressure when a relief device is fitted and at least 4 times the working pressure when no relief device is fitted;
  - .4 Each receptacle is manufactured from material which will not fragment upon rupture;
  - .5 Each detector is manufactured under a registered quality assurance programme;
- Note:** ISO 9001:2008 may be used for this purpose.

## Part 3 – Dangerous Goods List, special provisions and exceptions

3

- .6 Detectors are transported in strong outer packagings. The complete package shall be capable of withstanding a 1.2 metre drop test without breakage of the detector or rupture of the outer packaging. Equipment that includes a detector shall be packed in a strong outer packaging unless the detector is afforded equivalent protection by the equipment in which it is contained; and
- .7 The transport document includes the following statement “Transport in accordance with special provision 378”.

Radiation detectors, including detectors in radiation detection systems, are not subject to any other requirements of this Code if the detectors meet the requirements in .1 to .6 above and the capacity of detector receptacles does not exceed 50 ml.

- △ 379 Anhydrous ammonia adsorbed on a solid or absorbed in a solid contained in ammonia dispensing systems or receptacles intended to form part of such systems are not subject to the other provisions of this Code if the following conditions are observed:
  - .1 The adsorption or absorption presents the following properties:
    - .1 the pressure at a temperature of 20°C in the receptacle is less than 0.6 bar;
    - .2 the pressure at a temperature of 35°C in the receptacle is less than 1 bar;
    - .3 the pressure at a temperature of 85°C in the receptacle is less than 12 bar;
  - .2 The adsorbent or absorbent material shall not have dangerous properties listed in classes 1 to 8;
  - .3 The maximum contents of a receptacle shall be 10 kg of ammonia; and
  - .4 Receptacles containing adsorbed or absorbed ammonia shall meet the following conditions:
    - △ .1 receptacles shall be made of a material compatible with ammonia as specified in ISO 11114-1:2020;
    - .2 receptacles and their means of closure shall be hermetically sealed and able to contain the generated ammonia;
    - .3 each receptacle shall be able to withstand the pressure generated at 85°C with a volumetric expansion no greater than 0.1%;
    - .4 each receptacle shall be fitted with a device that allows for gas evacuation once pressure exceeds 15 bar without violent rupture, explosion or projection; and
    - .5 each receptacle shall be able to withstand a pressure of 20 bar without leakage when the pressure relief device is deactivated.

When transported in an ammonia dispenser, the receptacles shall be connected to the dispenser in such a way that the assembly is guaranteed to have the same strength as a single receptacle.

The properties of mechanical strength mentioned in this special provision shall be tested using a prototype of a receptacle and/or dispenser filled to nominal capacity, by increasing the temperature until the specified pressures are reached.

The test results shall be documented, shall be traceable and shall be communicated to the relevant authorities upon request.

- 381 Large packagings conforming to the packing group III performance level used in accordance with packing instruction LP02 of 4.1.4.3, as prescribed in the IMDG Code (amendment 37-14), may be used until 31 December 2022.
- 382 Polymeric beads may be made from polystyrene, poly(methyl methacrylate) or other polymeric material. When it can be demonstrated that no flammable vapour, resulting in a flammable atmosphere, is evolved according to test U1 (Test method for substances liable to evolve flammable vapours) of part III, subsection 38.4.4 of the *Manual of Tests and Criteria*, polymeric beads, expandable, need not be classified under this UN number. This test should only be performed when declassification of a substance is considered.
- 383 Table tennis balls manufactured from celluloid are not subject to this Code where the net mass of each table tennis ball does not exceed 3.0 g and the total net mass of table tennis balls does not exceed 500 g per package.
- 384 The label to be used is Model No. 9A, see 5.2.2.2.2. However, for placarding of cargo transport units, the placard shall correspond to Model No. 9.
- 386 When substances are stabilized by temperature control, the provisions of 7.3.7 apply. When chemical stabilization is employed, the person offering the packaging, IBC or tank for transport shall ensure that the level of stabilization is sufficient to prevent the substance in the packaging, IBC or tank from dangerous polymerization at a bulk mean temperature of 50°C, or, in the case of a portable tank, 45°C. Where chemical stabilization becomes ineffective at lower temperatures within the anticipated duration of transport, temperature control is required. In making this determination factors to be taken into consideration include, but are not limited to, the capacity and geometry of the packaging, IBC or tank and the effect of any insulation present, the temperature of the substance when offered for transport, the duration of the journey and the ambient temperature conditions typically encountered

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

in the journey (considering also the season of year), the effectiveness and other properties of the stabilizer employed, applicable operational controls imposed by regulation (e.g. requirements to protect from sources of heat, including other cargo transported at a temperature above ambient) and any other relevant factors.

387 Lithium batteries in conformity with 2.9.4.6 containing both primary lithium metal cells and rechargeable lithium ion cells shall be assigned to UN 3090 or 3091 as appropriate. When such batteries are transported in accordance with special provision 188, the total lithium content of all lithium metal cells contained in the battery shall not exceed 1.5 g and the total capacity of all lithium ion cells contained in the battery shall not exceed 10 Wh.

△ 388 UN 3166 entries apply to vehicles powered by flammable liquid or gas internal combustion engines or fuel cells.

Vehicles powered by a fuel cell engine shall be assigned to the entries UN 3166 VEHICLE, FUEL CELL, FLAMMABLE GAS POWERED or UN 3166 VEHICLE, FUEL CELL, FLAMMABLE LIQUID POWERED, as appropriate. These entries include hybrid electric vehicles powered by both a fuel cell and an internal combustion engine with wet batteries, sodium batteries, lithium metal batteries or lithium ion batteries, transported with the battery(ies) installed.

Other vehicles which contain an internal combustion engine shall be assigned to the entries UN 3166 VEHICLE, FLAMMABLE GAS POWERED or UN 3166 VEHICLE, FLAMMABLE LIQUID POWERED, as appropriate. These entries include hybrid electric vehicles powered by both an internal combustion engine and wet batteries, sodium batteries, lithium metal batteries or lithium ion batteries, transported with the battery(ies) installed.

If a vehicle is powered by a flammable liquid and a flammable gas internal combustion engine, it shall be assigned to UN 3166 VEHICLE, FLAMMABLE GAS POWERED.

△ Entry UN 3171 only applies to vehicles and equipment powered by wet batteries, metallic sodium batteries or sodium alloy batteries, transported with these batteries installed.

■ UN 3556 VEHICLE, LITHIUM ION BATTERY POWERED, UN 3557 VEHICLE, LITHIUM METAL BATTERY POWERED and UN 3558 VEHICLE, SODIUM ION BATTERY POWERED, as applicable, apply to vehicles powered by lithium ion, lithium metal or sodium ion batteries transported with the batteries installed.

△ For the purpose of this special provision, vehicles are self-propelled apparatus designed to carry one or more persons or goods. Examples of such vehicles are cars, motorcycles, scooters, three- and four-wheeled vehicles or motorcycles, trucks, locomotives, bicycles (pedal cycles with a motor) and other vehicles of this type (e.g. self-balancing vehicles or vehicles not equipped with at least one seating position), wheelchairs, lawn tractors, self-propelled farming and construction equipment, boats and aircraft. When vehicles are transported in a packaging, some parts of the vehicle, other than the battery, may be detached from its frame to fit into the packaging.

Examples of equipment are lawnmowers, cleaning machines or model boats and model aircraft. Equipment powered by lithium metal batteries or lithium ion batteries shall be assigned to the entries UN 3091 LITHIUM METAL BATTERIES CONTAINED IN EQUIPMENT or UN 3091 LITHIUM METAL BATTERIES PACKED WITH EQUIPMENT or UN 3481 LITHIUM ION BATTERIES CONTAINED IN EQUIPMENT or UN 3481 LITHIUM ION BATTERIES PACKED WITH EQUIPMENT, as appropriate. Lithium ion batteries or lithium metal batteries installed in a cargo transport unit and designed only to provide power external to the cargo transport unit shall be assigned to the entry UN 3536 LITHIUM BATTERIES INSTALLED IN CARGO TRANSPORT UNIT lithium ion batteries or lithium metal batteries.

Dangerous goods, such as batteries, airbags, fire extinguishers, compressed gas accumulators, safety devices and other integral components of the vehicle that are necessary for the operation of the vehicle or for the safety of its operator or passengers, shall be securely installed in the vehicle and are not otherwise subject to this Code.

■ Lithium batteries shall meet the provisions of 2.9.4, except that 2.9.4.1, 2.9.4.5.7, 2.9.4.6.3 if applicable, 2.9.4.6.4 if applicable and 2.9.4.7 do not apply when batteries of a production run of not more than 100 cells or batteries, or pre-production prototypes of cells or batteries when these prototypes are transported for testing, are installed in vehicles.

■ Where a lithium battery installed in a vehicle is damaged or defective, the battery shall be removed and transported according to SP376, unless otherwise approved by the competent authority.

389 This entry only applies to lithium ion batteries or lithium metal batteries installed in a cargo transport unit and designed only to provide power external to the cargo transport unit. The lithium batteries shall meet the requirements of 2.9.4.1 to .7 and contain the necessary systems to prevent overcharge and overdischarge between the batteries.

The batteries shall be securely attached to the interior structure of the cargo transport unit (e.g. by means of placement in racks, cabinets, etc.) in such a manner as to prevent short circuits, accidental

Part 3 – Dangerous Goods List, special provisions and exceptions

3

operation, and significant movement relative to the cargo transport unit under the shocks, loadings and vibrations normally incident to transport. Dangerous goods necessary for the safe and proper operation of the cargo transport unit (e.g. fire-extinguishing systems and air-conditioning systems), shall be properly secured to or installed in the cargo transport unit and are not otherwise subject to this Code. Dangerous goods not necessary for the safe and proper operation of the cargo transport unit shall not be transported within the cargo transport unit.

The batteries inside the cargo transport unit are not subject to marking or labelling requirements. The cargo transport unit shall display the UN number in accordance with 5.3.2.1.2 and be placarded on two opposing sides in accordance with 5.3.1.1.2.

390 When a package contains a combination of lithium batteries contained in equipment and lithium batteries packed with equipment, the following requirements apply for the purposes of package marking and documentation:

- .1 the package shall be marked “UN 3091 Lithium metal batteries packed with equipment”, or “UN 3481 Lithium ion batteries packed with equipment”, as appropriate. If a package contains both lithium ion batteries and lithium metal batteries packed with and contained in equipment, the package shall be marked as required for both battery types. However, button cell batteries installed in equipment (including circuit boards) need not be considered.
- .2 the transport document shall indicate “UN 3091 Lithium metal batteries packed with equipment” or “UN 3481 Lithium ion batteries packed with equipment”, as appropriate. If a package contains both lithium metal batteries and lithium ion batteries packed with and contained in equipment, then the transport document shall indicate both “UN 3091 Lithium metal batteries packed with equipment” and “UN 3481 Lithium ion batteries packed with equipment”

391 Articles containing dangerous goods of class 2.3, or class 4.2, or class 4.3, or class 5.1, or class 5.2 or class 6.1 for substances of inhalation toxicity requiring packing group I and articles containing more than one of the hazards listed in 2.0.3.4.2 to 2.0.3.4.4 shall be transported under conditions approved by the competent authority.

392 For the transport of fuel gas containment systems designed and approved to be fitted in motor vehicles containing this gas, the provisions of subsection 4.1.4.1 and chapter 6.2 of this Code need not be applied when transported for disposal, recycling, repair, inspection, maintenance or from where they are manufactured to a vehicle assembly plant, provided the following conditions are met:

- .1 The fuel gas containment systems shall meet the requirements of the standards or regulations for fuel tanks for vehicles, as applicable. Examples of applicable standards and regulations are:

| <b>LPG tanks</b>                    |   |
|-------------------------------------|---|
| ECE Regulation No. 67<br>Revision 2 | Uniform provisions concerning:<br>I. Approval of specific equipment of vehicles of category M and N using liquefied petroleum gases in their propulsion system;<br>II. Approval of vehicles of category M and N fitted with specific equipment for the use of liquefied petroleum gases in their propulsion system with regard to the installation of such equipment                              |
| ECE Regulation No. 115              | Uniform provisions concerning the approval of:<br>I. Gas tanks designed and constructed in accordance with previous versions of relevant standards or regulations for gas tanks for motor vehicles, which were applicable at the time of the certification of the vehicles for which the gas tanks were designed and constructed may continue to be transported;

- .2 The fuel gas containment systems shall be leakproof and shall not exhibit any signs of external damage which may affect their safety;

**Note 1:** Criteria may be found in standard ISO 11623:2015 *Gas cylinders – Composite construction – Periodic inspection and testing* (or ISO 19078:2013 *Gas cylinders – Inspection of the cylinder installation, and requalification of high pressure cylinders for the on-board storage of natural gas as a fuel for automotive vehicles*).

**Note 2:** If the fuel gas containment systems are not leakproof or are overfilled or if they exhibit damage that could affect their safety (e.g. in case of a safety-related recall), they shall only be carried in salvage pressure receptacles in conformity with this Code.

- .3 If a fuel gas containment system is equipped with two valves or more integrated in line, the two valves shall be closed as to be gastight under normal conditions of transport. If only one valve exists or only one valve works, all openings with the exception of the opening of the pressure relief device shall be closed as to be gastight under normal conditions of transport;
- .4 Fuel gas containment systems shall be transported in such a way as to prevent obstruction of the pressure relief device or any damage to the valves and any other pressurised part of the fuel gas containment systems and unintentional release of the gas under normal conditions of

## Part 3 – Dangerous Goods List, special provisions and exceptions

- transport. The fuel gas containment system shall be secured in order to prevent slipping, rolling or vertical movement;
- .5 Valves shall be protected by one of the methods described in 4.1.6.1.8.1 to 4.1.6.1.8.5;
  - .6 Except for the case of fuel gas containment systems removed for disposal, recycling, repair, inspection or maintenance, they shall be filled with not more than 20% of their nominal filling ratio or nominal working pressure, as applicable;
  - .7 Notwithstanding the provisions of chapter 5.2, when fuel gas containment systems are consigned in a handling device, markings and labels may be affixed to the handling device; and
  - .8 Notwithstanding the provisions of 5.4.1.5, the information on the total quantity of dangerous goods may be replaced by the following information:
    - .1 the number of fuel gas containment systems; and
    - .2 in the case of liquefied gases the total net mass (kg) of gas of each fuel gas containment system and, in the case of compressed gases, the total water capacity (l) of each fuel gas containment system followed by the nominal working pressure.
- Examples for information in the transport document:
- Example 1: “UN 1971 natural gas, compressed, 2.1, 1 fuel gas containment system of 50 l in total, 200 bar”.
- Example 2: “UN 1965 hydrocarbon gas mixture, liquefied, n.o.s., 2.1, 3 fuel gas containment systems, each of 15 kg net mass of gas”.
- 393 The nitrocellulose shall meet the criteria of the Bergmann-Junk test or methyl violet paper test in the *Manual of Tests and Criteria* Appendix 10. Tests of type 3 (c) need not be applied.
- 394 The nitrocellulose shall meet the criteria of the Bergmann-Junk test or methyl violet paper test in the *Manual of Tests and Criteria* Appendix 10.
- 395 This entry shall only be used for solid medical waste of category A transported for disposal.
- △ 396 Large and robust articles may be transported with connected gas cylinders with the valves open regardless of 4.1.6.1.5 provided:
- .1 the gas cylinders contain nitrogen of UN 1066 or compressed gas of UN 1956 or compressed air of UN 1002;
  - .2 the gas cylinders are connected with the article through pressure regulators and fixed piping in such a way that the pressure of the gas (gauge pressure) in the article does not exceed 35 kPa (0.35 bar);
  - .3 the gas cylinders are properly secured so that they cannot move in relation to the article and are fitted with strong and pressure resistant hoses and pipes;
  - .4 the gas cylinders, pressure regulators, piping and other components are protected from damage and impacts during transport by wooden crates or other suitable means;
  - .5 the transport document includes the following statement: “Transport in accordance with special provision 396.”; and
  - .6 cargo transport units containing articles transported with cylinders with open valves containing a gas presenting a risk of asphyxiation are well ventilated and marked in accordance with 5.5.3.6.
- 397 Mixtures of nitrogen and oxygen containing not less than 19.5% and not more than 23.5% oxygen by volume may be transported under this entry when no other oxidizing gases are present. A division 5.1 subsidiary hazard label is not required for any concentrations within this limit.
- 398 This entry applies to mixtures of butylenes, 1-butylene, *cis*-2-butylene and *trans*-2-butylene. For isobutylene, see UN 1055.
- 399 For articles that meet the definition for DETONATORS, ELECTRONIC as described in appendix B and assigned to UN Nos. 0511, 0512 and 0513, the entries for DETONATORS, ELECTRIC (UN Nos. 0030, 0255 and 0456) may continue to be used until 30 June 2025.
- 400 Sodium ion cells and batteries and sodium ion cells and batteries contained in or packed with equipment, prepared and offered for transport, are not subject to other provisions of this Code if they meet the following:
- .1 The cell or battery is short-circuited, in a way that the cell or battery does not contain electrical energy. The short-circuiting of the cell or battery shall be easily verifiable (e.g. busbar between terminals).
  - .2 Each cell or battery meets the provisions of 2.9.5.1, 2.9.5.2, 2.9.5.4, 2.9.5.5 and 2.9.5.6.
  - .3 Each package shall be marked according to 5.2.1.9.
  - .4 Except when cells or batteries are installed in equipment, each package shall be capable of withstanding a 1.2 m drop test in any orientation without damage to cells or batteries contained therein, without shifting of the contents so as to allow battery to battery (or cell to cell) contact and without release of contents.

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- .5 Cells and batteries, when installed in equipment shall be protected from damage. When batteries are installed in equipment, the equipment shall be packed in strong outer packagings constructed of suitable material of adequate strength and design in relation to the packaging's capacity and its intended use unless the battery is afforded equivalent protection by the equipment in which it is contained.
- .6 Each cell, including when it is a component of a battery, shall only contain dangerous goods that are authorized to be transported in accordance with the provisions of chapter 3.4 and in a quantity not exceeding the quantity specified in column 7a of the Dangerous Goods List of chapter 3.2.
- 401 Sodium ion cells and batteries with organic electrolyte shall be transported as UN 3551 or 3552, as appropriate. Sodium ion cells and batteries with aqueous alkali electrolyte shall be transported as UN 2795 BATTERIES, WET, FILLED WITH ALKALI, electric storage.
- 402 Substances transported under this entry shall have a vapour pressure at 70°C not exceeding 1.1 MPa (11 bar) and a density at 50°C not lower than 0.525 kg/L.
- 403 Nitrocellulose (NC) membrane filters covered by this entry with NC content not exceeding 53 g/m<sup>2</sup> and an NC net mass not exceeding 300 g per inner packaging, are not subject to these requirements if they meet the following conditions:
- .1 They are packed with paper separators of minimum 80 g/m<sup>2</sup> placed between each layer of NC membrane filters.
  - .2 They are packed to maintain the alignment of the NC membrane filters and the paper separators in any of the following configurations:
    - .1 Rolls tightly wound and packed in plastic foil of minimum 80 g/m<sup>2</sup> or aluminium pouches with an oxygen permeability of equal or less than 0.1% according to standard ISO 15105-1:2007.
    - .2 Sheets packed in cardboard of minimum 250 g/m<sup>2</sup> or aluminium pouches with an oxygen permeability of equal or less than 0.1% according to standard ISO 15105-1:2007.
    - .3 Round filters packed in disc holders or cardboard packaging of minimum 250 g/m<sup>2</sup> or single packed in pouches of paper and plastic material of total minimum 100 g/m<sup>2</sup>.
- 404 Vehicles powered by sodium ion batteries, containing no other dangerous goods, are not subject to other provisions of this Code, if the battery is short-circuited in a way that the battery does not contain electrical energy. The short-circuiting of the battery shall be easily verifiable (e.g. busbar between terminals).
- 405 Vehicles are not subject to the marking or labelling requirements of chapter 5.2 when they are not fully enclosed by packagings, crates or other means that prevent ready identification.
- 406 This entry may be transported in accordance with the limited quantity provisions of chapter 3.4 when transported in pressure receptacles containing not more than 1,000 mL. The pressure receptacles shall meet the requirements of packing instruction P200 of 4.1.4.1 and have a test pressure capacity product not exceeding 15.2 MPa L (152 bar L). The pressure receptacles shall not be packed together with other dangerous goods.
- 407 Fire suppressant dispersing devices are articles which contain a pyrotechnic substance, which are intended to disperse a fire-extinguishing agent (or aerosol) when activated, and which do not contain any other dangerous goods. These articles, as packaged for transport, shall fulfil the criteria for division 1.4S, when tested in accordance with test series 6(c) of section 16 of part I of the *Manual of Tests and Criteria*. The device shall be transported with either the means of activation removed or equipped with at least two independent means to prevent accidental activation.
- Fire suppressant dispersing devices shall only be assigned to class 9, UN 3559 if the following additional conditions are met:
- .1 The device meets the exclusion criteria in 2.1.3.4.2.2, 2.1.3.4.2.3 and 2.1.3.4.2.4.
  - .2 The suppressant shall be deemed safe for normally occupied spaces in compliance with international or regional standards (e.g. NFPA 2010).
  - .3 The article shall be packaged in a manner such that when activated, temperatures of the outside of the package shall not exceed 200°C.
  - .4 This entry shall be used only with the approval of the competent authority of the country of manufacture.
- This entry does not apply to "SAFETY DEVICES, electrically initiated" described in special provision 280 (UN 3268).
- 408 This entry applies only to aqueous solutions comprised of water, tetramethylammonium hydroxide (TMAH), and no more than 1% of other constituents. Other formulations containing

## Part 3 – Dangerous Goods List, special provisions and exceptions

- 3
- tetramethylammonium hydroxide must be assigned to an appropriate generic or N.O.S. entry (e.g. UN 2927, TOXIC LIQUID, CORROSIVE, ORGANIC, N.O.S., etc.), except as follows:
- .1 other formulations containing a surfactant in a concentration > 1% and with not less than 8.75% tetramethylammonium hydroxide must be assigned to UN 2927, TOXIC LIQUID, CORROSIVE, ORGANIC, N.O.S., PG I; and
  - .2 other formulations containing a surfactant in a concentration > 1% and with more than 2.38% but less than 8.75% tetramethylammonium hydroxide must be assigned to UN 2927, TOXIC LIQUID, CORROSIVE, ORGANIC, N.O.S., PG II.
- 409 The provisions of chapter 3.2 from the IMDG Code Amendment 41-22 may continue to be applied until 31 December 2026.
- 900 The transport of the following substances is prohibited:
- AMMONIUM HYPOCHLORITE
  - AMMONIUM NITRATE liable to self-heating sufficient to initiate decomposition
  - AMMONIUM NITRITES and mixtures of an inorganic nitrite with an ammonium salt
  - CHLORIC ACID, AQUEOUS SOLUTION with more than 10% chloric acid
  - ETHYL NITRITE pure
  - HYDROCYANIC ACID, AQUEOUS SOLUTION (HYDROGEN CYANIDE, AQUEOUS SOLUTION) with more than 20% hydrogen cyanide
  - HYDROGEN CHLORIDE, REFRIGERATED LIQUID
  - HYDROGEN CYANIDE SOLUTION, IN ALCOHOL with more than 45% hydrogen cyanide
  - MERCURY OXYCYANIDE pure
  - METHYL NITRITE
  - PERCHLORIC ACID with more than 72% acid, by mass
  - SILVER PICRATE, dry or wetted with less than 30% water by mass
  - ZINC AMMONIUM NITRITE
- See also special provisions 349, 350, 351, 352 and 353.
- 903 HYPOCHLORITE MIXTURES with 10% or less available CHLORINE are not subject to the provisions of this Code.
- 904 The provisions of this Code, except for the marine pollution aspects, do not apply to these substances if they are completely miscible with water, except when transported in receptacles with a capacity greater than 250 L and in tanks.
- 905 May only be shipped as an 80% solution in TOLUENE. The pure product is shock-sensitive and decomposes with explosive violence and the possibility of detonation when heated under confinement. Can be ignited by impact.
- 907 The consignment shall be accompanied by a certificate from a recognized authority stating:
- moisture content;
  - fat content;
  - details of anti-oxidant treatment for meals older than 6 months (for UN 2216 only);
  - anti-oxidant concentration at the time of shipment, see special provision 308 (for UN 2216 only);
  - packing, number of bags and total mass of the consignment;
  - temperature of fish meal at the time of despatch from the factory;
  - date of production.
- No weathering/curing is required prior to loading. Fish meal under UN 1374 shall have been weathered for not less than 28 days before shipment.
- When fish meal is packed into containers, the containers shall be packed in such a way that the free air space has been restricted to the minimum.
- 912 This entry also covers solutions in water with concentrations above 70%.
- 916 The provisions of this Code do not apply to this substance when:
- mechanically produced, with a particle size of 53 microns or greater; or
  - chemically produced, with a particle size of 840 microns or greater.
- 917 Scrap with rubber content below 45% or exceeding 840 microns and fully vulcanized hard rubber are not subject to the provisions of this Code.
- 920 Bars, ingots or sticks are not subject to the provisions of this Code.
- 921 Zirconium, dry, 254 microns or thicker is not subject to the provisions of this Code.

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- △ 922 With the exception of the documentation requirements in 5.4.4.2, the provisions of this Code do not apply to LEAD PHOSPHITE, DIBASIC which is accompanied by a certificate from the shipper stating that the substance, as offered for shipment, has been stabilized in such a way that it does not possess properties of class 4.1.
- 923 The temperature shall be checked regularly.
- ⊗
- 926 This substance shall preferably have been weathered for not less than one month before shipment unless a certificate from a person recognized by the competent authority of the country of shipment states a maximum moisture content of 5%.
- 927 *p*-Nitrosodimethylaniline, wetted with more than 50% water is not subject to the provisions of this Code.
- △ 928 The provisions of this Code do not apply:
- to fish meal when acidified and wetted with more than 40% water, by mass, irrespective of other factors;
  - to fish meal manufactured from “white” fish with a moisture content of not more than 12% and a fat content of not more than 5% by mass; or
  - with the exception of the documentation requirements in 5.4.4.2, to consignments of fish meal which are accompanied by a certificate issued by the competent authority of the country of shipment or other recognized authority stating that the product has no self-heating properties when transported in packaged form.
- 929 If satisfied, as a result of tests, that such relaxation is justified, the competent authority may permit:
- the seed cakes described as “SEED CAKE, containing vegetable oil (a) mechanically expelled seeds, containing more than 10% of oil or more than 20% of oil and moisture combined” to be transported under conditions governing “SEED CAKE, containing vegetable oil (b) solvent extractions and expelled seeds, containing not more than 10% of oil and, when the amount of moisture is higher than 10% not more than 20% of oil and moisture combined”, and
  - the seed cakes described as “SEED CAKE, containing vegetable oil (b) solvent extractions and expelled seeds, containing not more than 10% of oil and, when the amount of moisture is higher than 10% not more than 20% of oil and moisture combined” to be transported under conditions governing SEED CAKE, UN 2217.
- Certificates from the shipper shall state oil content and moisture content and shall accompany the shipment.
- 930 All pesticides can only be carried under the provisions of this class if accompanied by a certificate supplied by the shipper stating that, when in contact with water, it is not combustible and does not show tendency to autoignition, and that the mixture of gases evolved is not flammable. Otherwise, the provisions of class 4.3 shall be applicable.
- △ 931 With the exception of the documentation requirements in 5.4.4.2, the provisions of this Code do not apply to a consignment of this substance which is accompanied by a certificate from the shipper stating that it has no self-heating properties.
- 932 Requires a certificate from the maker or shipper, stating that the shipment was stored under cover, but in the open air, in the size in which it was packaged, for not less than 3 days prior to shipment.
- 934 Requires the percentage range of calcium carbide impurity to be shown on the shipping documents.
- △ 935 With the exception of the documentation requirements in 5.4.4.2, the provisions of this Code do not apply to substances which do not evolve flammable gases when wet which are accompanied by a certificate from the shipper, stating that the substance as offered for shipment does not evolve flammable gases when wet.
- 937 The solid hydrated form of this substance is not subject to the provisions of this Code.
- △ 939 With the exception of the documentation requirements in 5.4.4.2, the provisions of this Code do not apply to a consignment of this substance that is accompanied by a shipper’s certificate stating that it does not contain more than 0.05% maleic anhydride.
- 942 The concentration and temperature of the solution at the time of loading, its percentage of combustible material and of chlorides as well as the contents of free acid shall be certified.
- 943 Water-activated articles shall bear a subsidiary hazard label of class 4.3.
- 946 Requires certification from the shipper that the substance is not of class 4.2.
- 948 These substances may be transported in bulk in cargo transport units only if their melting point is 75°C or above.
- 952 UN 1942 may be transported in bulk container if approved by the competent authority.

## Part 3 – Dangerous Goods List, special provisions and exceptions

- 3
- △ 954 With the exception of the documentation requirements in 5.4.4.2, the provisions of this Code do not apply to baled hay with a moisture content of less than 14% shipped in closed cargo transport units and accompanied by a certificate from the shipper stating that the product does not present any class 4.1 UN 1327 hazard in transport and that its moisture content is less than 14%.
- 955 If a viscous substance and its packaging fulfils the provisions of 2.3.2.5, the packing provisions of chapter 4.1, the marking and labelling provisions of chapter 5.2 and the package testing provisions of chapter 6.1 are not applicable.
- 958 This entry also covers articles, such as rags, cotton waste, clothing or sawdust, containing polychlorinated biphenyls, polyhalogenated biphenyls or polyhalogenated terphenyls where no free visible liquid is present.
- 959 Waste aerosols or waste gas cartridges authorized for transport under special provision 327 shall only be transported on short international voyages. Long international voyages are authorized only with the approval of the competent authority. Packagings shall be marked and labelled and cargo transport units shall be marked and placarded for appropriate sub-division of class 2 and, if applicable, the subsidiary hazard(s).
- 960 Not subject to the provisions of this Code but may be subject to provisions governing the transport of dangerous goods by other modes.
- △ 961 Vehicles are not subject to the provisions of this Code, other than those in P912, SP388 and SP977 when applicable, if any of the following conditions are met:
- .1 vehicles are stowed on the vehicle, special category and ro-ro spaces or on the weather deck of a ro-ro ship or a cargo space designated by the Administration (flag State) in accordance with SOLAS 74, chapter II-2, regulation 20 as specifically designed and approved for the carriage of vehicles, and there are no signs of leakage from the battery, engine, fuel cell, compressed gas cylinder or accumulator, or fuel tank when applicable. When packed in a cargo transport unit the exception does not apply to container cargo spaces of a ro-ro ship.
  - .2 vehicles powered by a flammable liquid fuel with a flashpoint of 38°C or above, there are no leaks in any portion of the fuel system, the fuel tank(s) contains 450 L of fuel or less and installed batteries are protected from short-circuit;
  - .3 vehicles powered by a flammable liquid fuel with a flashpoint less than 38°C, the fuel tank(s) are empty and installed batteries are protected from short circuit. Vehicles are considered to be empty of flammable liquid fuel when the fuel tank has been drained and the vehicles cannot be operated due to a lack of fuel. Engine components such as fuel lines, fuel filters and injectors do not need to be cleaned, drained or purged to be considered empty. The fuel tank does not need to be cleaned or purged;
  - .4 vehicles powered by a flammable gas (liquefied or compressed), the fuel tank(s) are empty and the positive pressure in the tank does not exceed 2 bar, the fuel shut-off or isolation valve is closed and secured, and installed batteries are protected from short circuit;
  - .5 vehicles solely powered by a wet or dry electric storage battery or a sodium battery, and the battery is protected from short circuit.
  - .6 vehicles solely powered by a sodium ion battery, and the battery is short-circuited in a way that the battery does not contain electrical energy. The short circuiting shall be easily identifiable (e.g. busbar between terminals).
- △ 962 Vehicles, not meeting the conditions of special provision 961 shall be assigned to class 9 and shall meet the following requirements:
- .1 vehicles shall not show signs of leakage from batteries, engines, fuel cells, compressed gas cylinders or accumulators, or fuel tank(s) when applicable;
  - .2 for flammable liquid powered vehicles the fuel tank(s) containing the flammable liquid shall not be more than one fourth full and in any case the flammable liquid shall not exceed 250 L unless otherwise approved by the competent authority;
  - .3 for flammable gas powered vehicles, the fuel shut-off valve of the fuel tank(s) shall be securely closed;
  - △ .4 installed batteries shall meet the provisions of SP388 or SP977, as applicable, and be protected from damage, short circuit, and accidental activation during transport.
  - △ The provisions of this Code relevant to marking, labelling, placarding and marine pollutants shall only apply to vehicles that are fully enclosed by packagings, crates or other means that prevent ready identification (e.g., overpack).
- 963 Nickel-metal hydride cells or batteries packed with or contained in equipment and nickel-metal hydride button cells are not subject to the provisions of this Code.
- All other nickel-metal hydride cells or batteries shall be securely packed and protected from short circuit. They are not subject to other provisions of this Code provided that they are loaded in a cargo

## Chapter 3.3 – Special provisions applicable to certain substances, materials or articles

3

- transport unit in a total quantity of less than 100 kg gross mass. When loaded in a cargo transport unit in a total quantity of 100 kg gross mass or more, they are not subject to other provisions of this Code except those of 5.4.1, 5.4.3 and columns 16a and 16b of the Dangerous Goods List in chapter 3.2.
- △ 964 With the exception of the documentation requirements in 5.4.4.2, the provisions of this Code do not apply to this substance when:
- .1 it is transported in non-friable prills or granules form;
  - .2 it does not meet the criteria for class 5.1 based on the result of one of the tests for oxidizing solid substances as reflected in the UN Manual of Tests and Criteria (see 34.4.1 or 34.4.3); and
  - .3 it is accompanied by a certificate issued by a laboratory recognized by the competent authority stating the results of the test.
- 965 .1 When transported in cargo transport units, the cargo transport units shall provide an adequate exchange of air in the unit (e.g. by using a ventilated container, open-top container or container in one door off operation) to prevent the build-up of an explosive atmosphere. Alternatively, these entries shall be transported under temperature control in refrigerated cargo transport units that comply with the provisions of 7.3.7.6. When cargo transport units with venting devices are used, these devices shall be kept clear and operable. When mechanical devices are used for ventilation, they shall be explosion-proof to prevent ignition of flammable vapours from the substances.
- .2 The provisions of .1 do not apply if:
    - .1 the substance is packed in hermetically sealed packagings or IBCs, which conform to packing group II performance level for liquid dangerous goods according to the provisions of 6.1 or 6.5, respectively; and
    - .2 the marked hydraulic test pressure exceeds 1.5 times the total gauge pressure in the packagings or IBCs determined at 55°C for the respective filling goods according to 4.1.1.10.1.
  - .3 Where the substance is loaded in closed cargo transport units, the provisions of 7.3.6.1 shall be met.
  - .4 Cargo transport units shall be marked with a warning mark including the words “CAUTION – MAY CONTAIN FLAMMABLE VAPOUR” with lettering not less than 25 mm high. This mark shall be affixed at each access point in a location where it will be easily seen by persons prior to opening or entering the cargo transport unit and shall remain on the cargo transport unit until the following provisions are met:
    - .1 the cargo transport unit has been completely ventilated to remove any hazardous concentration of vapour or gas;
    - .2 the immediate vicinity of the cargo transport unit is clear of any source of ignition; and
    - .3 the goods have been unloaded.
- 966 Sheeted bulk containers (BK1) are only permitted in accordance with 4.3.3.
- 967 Flexible bulk containers (BK3) are only permitted in accordance with 4.3.4.
- 968 This entry shall not be used for sea transport. Discarded packaging shall meet the requirements of 4.1.1.11.
- 969 Substances classified in accordance to 2.9.3 are subject to the provisions for marine pollutants. Substances which are transported under UN 3077 and UN 3082 but which do not meet the criteria of 2.9.3 (see 2.9.2.2) are not subject to the provisions for marine pollutants. However for substances that are identified as marine pollutants in this Code (see Index) but which no longer meet the criteria of 2.9.3, the provisions of 2.10.2.6 apply.
- 971 Battery powered equipment may only be transported provided that the battery shows no sign of leakage and is protected from short-circuit. In this case, no other provisions of this Code apply.
- △ 972 Lithium batteries shall meet the provisions of 2.9.4, except that 2.9.4.1, 2.9.4.5.7, 2.9.4.6.3 if applicable, 2.9.4.6.4 if applicable and 2.9.4.7 do not apply when batteries of a production run of not more than 100 cells or batteries, or pre-production prototypes of cells or batteries when these prototypes are transported for testing, are installed in machinery or engines. Where a lithium battery installed in an engine or machinery is damaged or defective, the battery shall be removed.
- 973 Packages, with the exception of bales, shall also display the proper shipping name and the UN number of the substance that they contain in accordance with 5.2.1. In any case, the packages, including bales, are exempt from class marking provided that they are loaded in a cargo transport unit and that they contain goods to which only one UN number has been assigned. The cargo transport units in which the packages, including bales, are loaded shall display any relevant labels, placards and marks in accordance with chapter 5.3.
- 974 These substances may be transported in IMO type 9 tanks.

## Part 3 – Dangerous Goods List, special provisions and exceptions

- 3
- 975 MEDICAL WASTE, CATEGORY A, AFFECTING HUMANS, solid or MEDICAL WASTE, CATEGORY A, AFFECTING ANIMALS only, solid shall only be transported on short international voyages. Long international voyages are authorized only with the approval of the competent authorities of the port State of departure, port State of arrival and flag State.
- 976 The transport of this substance shall be prohibited except with the approval of the competent authorities of the port State of departure, port State of arrival and flag State.
- 977 Sodium ion batteries shall meet the provisions of 2.9.5.
- 978
- .1 For the purpose of this Code, carbon of animal or vegetable origin means carbon, generated in a production or manufacturing process, not formed in a geological process and not obtained from mining. Carbon covered by this entry is produced by pyrolysis of an organic material such as bone, bamboo, coconut shell, jute or wood.
  - .2 The UN N.4 test according to section 33.4.6 of the UN *Manual of Tests and Criteria* shall not be used to exempt carbon of animal or vegetable origin (UN 1361) from the provisions of this Code.
  - .3 Without testing, the material shall be assigned to at least packing group III.
  - .4 Unless otherwise approved by the competent authority, the following provisions apply:
    - .1 after production, the unpacked material shall be subject to weathering (stored under cover, but in the open air) for a minimum period of 14 days before being packaged for transport; or
    - .2 after pyrolysis, steam and cooling shall be applied to the unpacked material and the material shall be packed under an inert gas atmosphere (e.g. nitrogen); packages shall then be stored under loose cover or in the open air for a minimum of 24 hours before transport.
  - .5 The material shall be packed into packagings only when the temperature of the material does not exceed 40°C on the day of packing.
  - .6 When stowed in a cargo transport unit, minimum headspace in the CTU of 30 cm shall be maintained, and:
    - .1 the stowage height of the package(s) in the unit should not exceed 1.5 m; or
    - .2 the maximum block size of the packages should be 16 m<sup>3</sup> and a minimum of 15 cm of space between blocks should be maintained.
- 979 With the exception of the documentation requirements in 5.4.4.2, the provisions of this Code do not apply to this substance when:
- .1 it is accompanied by a certificate from the shipper stating that the substance is steam activated carbon; or
  - .2 it is chemically activated carbon, which is accompanied by a certificate issued by a laboratory recognized by the competent authority, stating that the substance does not meet the criteria for class 4.2 based on a negative test result for self-heating substances when tested in accordance with the UN *Manual of Tests and Criteria* (see 33.4.6).

## Chapter 3.4

### *Dangerous goods packed in limited quantities*

#### 3.4.1 General

3.4.1.1 This chapter provides the provisions applicable to the transport of dangerous goods of certain classes packed in limited quantities. The applicable quantity limit for the inner packaging or article is specified for each substance in column 7a of the Dangerous Goods List of chapter 3.2. In addition, the quantity "0" has been indicated in this column for each entry not permitted to be transported in accordance with this chapter.

3.4.1.2 Limited quantities of dangerous goods packed in such limited quantities, meeting the provisions of this chapter, are not subject to any other provisions of this Code except the relevant provisions of:

- .1 Part 1, chapters 1.1, 1.2 and 1.3;
- .2 Part 2;
- .3 Part 3, chapters 3.1, 3.2, 3.3;
- .4 Part 4, 4.1.1.1, 4.1.1.2 and 4.1.1.4 to 4.1.1.8;
- .5 Part 5, 5.1.1 except 5.1.1.6, 5.1.2.3, 5.2.1.7, 5.2.1.9, 5.3.2.4, and chapter 5.4;
- .6 Part 6, construction requirements of 6.1.4, 6.2.1.2 and 6.2.4;
- .7 Part 7, 7.1.3.2, 7.6.3.1 and 7.3 except 7.3.3.15 and 7.3.4.1.

#### 3.4.2 Packing

3.4.2.1 Dangerous goods shall be packed only in inner packagings placed in suitable outer packagings. Intermediate packagings may be used. In addition, for articles of division 1.4, compatibility group S, the provisions of section 4.1.5 shall be fully complied with. The use of inner packagings is not necessary for the transport of articles such as aerosols or "receptacles, small, containing gas". The total gross mass of the package shall not exceed 30 kg.

3.4.2.2 Except for articles of division 1.4, compatibility group S, shrink-wrapped or stretch-wrapped trays meeting the conditions of 4.1.1.1, 4.1.1.2 and 4.1.1.4 to 4.1.1.8 are acceptable as outer packagings for articles or inner packagings containing dangerous goods transported in accordance with this chapter. Inner packagings that are liable to break or be easily punctured, such as those made of glass, porcelain, stoneware or certain plastics, shall be placed in suitable intermediate packagings meeting the provisions of 4.1.1.1, 4.1.1.2 and 4.1.1.4 to 4.1.1.8, and be so designed that they meet the construction requirements of 6.1.4. The total gross mass of the package shall not exceed 20 kg.

3.4.2.3 Liquid goods of class 8, packing group II in glass, porcelain or stoneware inner packagings shall be enclosed in a compatible and rigid intermediate packaging.

#### 3.4.3 Stowage

Dangerous goods packed in limited quantity are allocated stowage category A as defined in 7.1.3.2. The other stowage provisions indicated in column 16a of the Dangerous Goods List are not applicable.

#### 3.4.4 Segregation

3.4.4.1 Different dangerous substances in limited quantities may be packed in the same outer packaging, provided:

- .1 the substances comply with the provisions of 7.2.6.1; and
- .2 the segregation provisions of chapter 7.2, including the segregation provisions in column 16b of the Dangerous Goods List, are taken into account. However, notwithstanding the individual provisions specified in the Dangerous Goods List, substances in packing group III within the same class may be packed together subject to compliance with 3.4.4.1.1 of the IMDG Code. The following statement shall be included in the transport document: "Transport in accordance with 3.4.4.1.2 of the IMDG Code" (see 5.4.1.5.2.2).

**Part 3 – Dangerous Goods List, special provisions and exceptions**

- 3.4.4.2 The segregation provisions of chapter 7.2 to 7.7 including the segregation provisions in column 16b of the Dangerous Goods List are not applicable for packagings containing dangerous goods in limited quantities or in relation to other dangerous goods. However, articles of division 1.4, compatibility group S shall not be stowed in the same compartment or hold, or cargo transport unit with dangerous goods of class 1 of compatibility groups A and L.

**3.4.5 Marking and placarding**

- 3.4.5.1 Except for air transport, packages containing dangerous goods in limited quantities shall bear the mark shown below:

**Mark for packages containing limited quantities**

The mark shall be readily visible, legible and able to withstand open weather exposure without a substantial reduction in effectiveness. The mark shall be in the form of a square set at an angle of 45° (diamond-shaped). The top and bottom portions and the surrounding line shall be black. The centre area shall be white or a suitable contrasting background. The minimum dimensions shall be 100 mm × 100 mm and the minimum width of the line forming the diamond shall be 2 mm. Where dimensions are not specified, all features shall be in approximate proportion to those shown. If the size of the package so requires, the minimum outer dimensions shown above may be reduced to be not less than 50 mm × 50 mm provided the mark remains clearly visible. The minimum width of the line forming the diamond may be reduced to a minimum of 1 mm.

- 3.4.5.2 Packages containing dangerous goods packed in conformity with the provisions of part 3, chapter 4 of the ICAO *Technical Instructions for the Safe Transport of Dangerous Goods by Air* may bear the mark shown below to certify conformity with these provisions:

**Mark for packages containing limited quantities conforming to part 3, chapter 4 of the ICAO *Technical Instructions for the Safe Transport of Dangerous Goods by Air***

The mark shall be readily visible, legible and able to withstand open weather exposure without a substantial reduction in effectiveness. The mark shall be in the form of a square set at an angle of 45° (diamond-shaped). The top and bottom portions and the surrounding line shall be black. The centre area shall be white or a suitable contrasting background. The minimum dimensions shall be 100 mm × 100 mm and the minimum width of the line forming the diamond shall be 2 mm. The symbol “Y” shall be placed in the centre of the mark and shall be clearly visible. Where dimensions are not specified, all features shall be in approximate proportion to those shown. If the size of the package so requires, the minimum outer dimensions shown

above may be reduced to be not less than 50 mm × 50 mm provided the mark remains clearly visible. The minimum width of the line forming the diamond may be reduced to a minimum of 1 mm. The symbol “Y” shall remain in approximate proportion to that shown above.

#### 3.4.5.3 Multimodal recognition of marks

3.4.5.3.1 Packages containing dangerous goods bearing the mark shown in 3.4.5.2 with or without the additional labels and marks for air transport shall be deemed to meet the provisions of section 3.4.2 and need not bear the mark shown in 3.4.5.1.

3.4.5.3.2 Packages containing dangerous goods in limited quantities bearing the mark shown in 3.4.5.1 and conforming with the provisions of the ICAO *Technical Instructions for the Safe Transport of Dangerous Goods by Air*, including all necessary marks and labels specified in parts 5 and 6, shall be deemed to meet the provisions of section 3.4.1 as appropriate and of section 3.4.2.

3.4.5.4 When packages containing dangerous goods packed in limited quantities are placed in an overpack or in a unit load, the overpack or the unit load shall be marked with the mark required by this chapter unless the marks representative of all dangerous goods in the overpack or the unit load are visible. In addition, an overpack shall be marked with the word “OVERPACK” unless marks representative of all dangerous goods, as required by this chapter, in the overpack are visible. The lettering of the “OVERPACK” mark shall be at least 12 mm high. The other provisions of 5.1.2.1 apply only if other dangerous goods which are not packed in limited quantities are contained in the overpack or in a unit load and only in relation to these other dangerous goods.

#### 3.4.5.5 Placarding and marking of cargo transport units

3.4.5.5.1 Cargo transport units containing dangerous goods packed in limited quantities with no other dangerous goods shall not be placarded nor marked according to 5.3.2.0 and 5.3.2.1. However, they shall be suitably marked on the exterior with the mark in 3.4.5.5.4.

3.4.5.5.2 Cargo transport units containing dangerous goods and dangerous goods packed in limited quantities shall be placarded and marked according to the provisions applicable to the dangerous goods which are not packed in limited quantities. However, if no placard or mark is required for the dangerous goods not packed in limited quantities, the cargo transport units shall be marked with the mark in 3.4.5.5.4.

3.4.5.5.3 [Reserved]

3.4.5.5.4 When required in 3.4.5.5.1 or 3.4.5.5.2, the following mark shall be affixed on cargo transport units:

The mark shall be readily visible, legible and be such that this information will still be identifiable on cargo transport units surviving at least three months' immersion in the sea. In considering suitable marking methods, account shall be taken of ease with which the surface of the cargo transport unit can be marked. The top and bottom portions and the surrounding line shall be black. The centre area shall be white or a suitable contrasting background. The minimum dimensions shall be of 250 mm × 250 mm in locations indicated in 5.3.1.1.4.1.

### 3.4.6 Documentation

3.4.6.1 In addition to the provisions for documentation specified in chapter 5.4, the words “limited quantity” or “LTD QTY” shall be included on the dangerous goods transport document together with the description of the shipment.

## Chapter 3.5

### *Dangerous goods packed in excepted quantities*

#### 3.5.1 Excepted quantities

3.5.1.1 Excepted quantities of dangerous goods of certain classes, other than articles, meeting the provisions of this chapter, are not subject to any other provisions of this Code except for:

- .1 The training provisions in chapter 1.3;
- .2 The classification procedures and packing group criteria in Part 2, Classification;
- .3 The packaging provisions of 4.1.1.1, 4.1.1.2, 4.1.1.4, 4.1.1.4.1 and 4.1.1.6 in Part 4; and
- .4 The provisions for documentation specified in chapter 5.4.

**Note:** In the case of radioactive material, the provisions for radioactive material in excepted packages in 1.5.1.5 apply.

3.5.1.2 Dangerous goods which may be carried as excepted quantities in accordance with the provisions of this chapter are shown in column 7b of the Dangerous Goods List by means of an alphanumeric code as follows:

| Code | Maximum net quantity per inner packaging<br>(in grams for solids and mL<br>for liquids and gases) | Maximum net quantity per outer packaging<br>(in grams for solids and mL for liquids<br>and gases, or sum of grams and mL<br>in the case of mixed packaging) |
|------|---|---|
| E0   | Not permitted as excepted quantity  |   |
| E1   | 30  | 1,000   |
| E2   | 30  | 500   |
| E3   | 30  | 300   |
| E4   | 1   | 500   |
| E5   | 1   | 300   |

For gases, the volume indicated for inner packagings refers to the water capacity of the inner receptacle and the volume indicated for outer packagings refers to the combined water capacity of all inner packagings within a single outer packaging.

3.5.1.3 Where dangerous goods in excepted quantities for which different codes are assigned are packaged together, the total quantity per outer packaging shall be limited to that corresponding to the most restrictive code.

3.5.1.4 Excepted quantities of dangerous goods assigned to codes E1, E2, E4 and E5 are not subject to the provisions of this Code provided that:

- .1 The maximum net quantity of material per inner packaging is limited to 1 mL for liquids and gases and 1 g for solids;
- .2 The provisions of 3.5.2 are met, except that an intermediate packaging is not required if the inner packagings are securely packed in an outer packaging with cushioning material in such a way that, under normal conditions of transport, they cannot break, be punctured, or leak their contents; and for liquid dangerous goods, the outer packaging contains sufficient absorbent material to absorb the entire contents of the inner packagings;
- .3 The provisions of 3.5.3 are complied with; and
- .4 The maximum net quantity of dangerous goods per outer packaging does not exceed 100 g for solids or 100 mL for liquids and gases.

## 3.5.2 Packagings

3.5.2.1 Packagings used for the transport of dangerous goods in excepted quantities shall be in compliance with the following:

- .1 There shall be an inner packaging and each inner packaging shall be constructed of plastic (when used for liquid dangerous goods it shall have a thickness of not less than 0.2 mm), or of glass, porcelain, stoneware, earthenware or metal (see also 4.1.1.2) and the closure of each inner packaging shall be held securely in place with wire, tape or other positive means; any receptacle having a neck with moulded screw threads shall have a leakproof threaded-type cap. The closure shall be resistant to the contents;
- .2 Each inner packaging shall be securely packed in an intermediate packaging with cushioning material in such a way that, under normal conditions of transport, they cannot break, be punctured or leak their contents. For liquid dangerous goods, the intermediate or outer packaging shall contain sufficient absorbent material to absorb the entire contents of the inner packagings. When placed in the intermediate packaging, the absorbent material may be the cushioning material. Dangerous goods shall not react dangerously with cushioning, absorbent material and packaging material or reduce the integrity or function of the materials. Regardless of its orientation, the package shall completely contain the contents in case of breakage or leakage;
- .3 The intermediate packaging shall be securely packed in a strong, rigid outer packaging (wooden, fibre-board or other equally strong material);
- .4 Each package type shall be in compliance with the provisions in 3.5.3;
- .5 Each package shall be of such a size that there is adequate space to apply all necessary marks; and
- .6 Overpacks may be used and may also contain packages of dangerous goods or goods not subject to the provisions of this Code.

## 3.5.3 Tests for packages

3.5.3.1 The complete package as prepared for transport, with inner packagings filled to not less than 95% of their capacity for solids or 98% for liquids, shall be capable of withstanding, as demonstrated by testing which is appropriately documented, without breakage or leakage of any inner packaging and without significant reduction in effectiveness:

- .1 Drops onto a rigid, non-resilient flat and horizontal surface from a height of 1.8 m:
  - (i) Where the sample is in the shape of a box, it shall be dropped in each of the following orientations:
    - flat on the base;
    - flat on the top;
    - flat on the longest side;
    - flat on the shortest side;
    - on a corner
  - (ii) Where the sample is in the shape of a drum, it shall be dropped in each of the following orientations:
    - diagonally on the top chime, with the centre of gravity directly above the point of impact;
    - diagonally on the base chime;
    - flat on the side.

**Note:** Each of the above drops may be performed on different but identical packages.

- .2 A force applied to the top surface for a duration of 24 h, equivalent to the total weight of identical packages if stacked to a height of 3 m (including the sample).

3.5.3.2 For the purposes of testing, the substances to be transported in the packaging may be replaced by other substances except where this would invalidate the results of the tests. For solids, when another substance is used, it shall have the same physical characteristics (mass, grain size, etc.) as the substance to be carried. In the drop tests for liquids, when another substance is used, its relative density (specific gravity) and viscosity shall be similar to those of the substance to be transported.

## 3.5.4 Marking of packages

3.5.4.1 Packages containing excepted quantities of dangerous goods prepared in accordance with this chapter shall be durably and legibly marked with the mark shown below. The primary hazard class of each of the dangerous goods contained in the package shall be shown in the mark. Where the name of the consignor or consignee is not shown elsewhere on the package, this information shall be included within the mark.

## 3.5.4.2

Excepted quantities mark

\* The class or, when assigned, the division number(s) shall be shown in this location.

\*\* The name of the consignor or of the consignee shall be shown in this location if not shown elsewhere on the package.

The mark shall be in the form of a square. The hatching and symbol shall be of the same colour, black or red, on white or suitable contrasting background. The minimum dimensions shall be 100 mm × 100 mm. Where dimensions are not specified, all features shall be in approximate proportion to those shown.

## 3.5.4.3

When packages containing dangerous goods packed in excepted quantities are placed in an overpack or in a unit load, the overpack or the unit load shall be marked with the mark required by this chapter unless the marks representative of all dangerous goods in the overpack or the unit load are visible. In addition, an overpack shall be marked with the word “OVERPACK” unless marks representative of all dangerous goods, as required by this chapter, in the overpack are visible. The lettering of the “OVERPACK” mark shall be at least 12 mm high. The other provisions of 5.1.2.1 apply only if other dangerous goods which are not packed in excepted quantities are contained in the overpack or in a unit load and only in relation to these other dangerous goods.

## 3.5.5 Maximum number of packages in any cargo transport unit

3.5.5.1 The number of packages containing dangerous goods packed in excepted quantities in any cargo transport unit shall not exceed 1,000.

## 3.5.6 Documentation

3.5.6.1 In addition to the provisions for documentation specified in chapter 5.4, the words “dangerous goods in excepted quantities” and the number of packages shall be included on the dangerous goods transport document together with the description of the shipment.

## 3.5.7 Stowage

3.5.7.1 Dangerous goods packed in excepted quantity are allocated stowage category A as defined in 7.1.3.2. The other stowage provisions indicated in column 16a of the Dangerous Goods List are not applicable.

## 3.5.8 Segregation

3.5.8.1 The segregation provisions of chapters 7.2 to 7.7, including the segregation provisions in column 16b of the Dangerous Goods List, are not applicable for packagings containing dangerous goods packed in excepted quantities or in relation to other dangerous goods.

3.5.8.2 The segregation provisions of chapters 7.2 to 7.7, including the segregation provisions in column 16b of the Dangerous Goods List, are not applicable for different dangerous goods in excepted quantities in the same outer packaging provided that they do not react dangerously with each other (see 4.1.1.6).

# APPENDICES

## Appendix A

---

### *List of generic and N.O.S. proper shipping names*

Substances or articles not mentioned specifically by name in the Dangerous Goods List in chapter 3.2 shall be classified in accordance with 3.1.1.2. Thus the name in the Dangerous Goods List which most appropriately describes the substance or article shall be used as the proper shipping name. The main generic entries and all the N.O.S. entries given in the Dangerous Goods List are listed below. This proper shipping name shall be supplemented by the technical name when special provision 274 or 318 has been assigned to the entry in column 6 of the Dangerous Goods List. For marine pollutants, see also 3.1.2.9.

In this list, general and N.O.S. names are grouped according to their hazard class or division. Within each hazard class or division, the names have been placed into three groups as follows:

- specific entries covering a group of substances or articles of a particular chemical or technical nature;
- pesticide entries, for class 3 and class 6.1;
- general entries covering a group of substances or articles having one or more general dangerous properties.

THE MOST SPECIFIC APPLICABLE NAME SHALL ALWAYS BE USED.

Appendices

| Class or division | Subsidiary hazard | UN No. | Proper shipping name  |
|-------------------|-------------------|--------|---|
| 1                 |                   | 0190   | <b>CLASS 1</b><br>SAMPLES, EXPLOSIVE, other than initiating explosive             |

# Appendix B

## Glossary of terms

**Note:** The provisions of this appendix are not mandatory.

**Caution:** The explanations in this glossary are for information only and are not to be used for purposes of hazard classification.

### Ammunition

Generic term related mainly to articles of military application consisting of all kind of bombs, grenades, rockets, mines, projectiles and other similar devices or contrivances.

### AMMUNITION, ILLUMINATING with or without burster, expelling charge or propelling charge

Ammunition designed to produce a single source of intense light for lighting up an area. The term includes illuminating cartridges, grenades and projectiles; and illuminating and target identification bombs. The term excludes the following articles which are listed separately: CARTRIDGES, SIGNAL; SIGNAL DEVICES, HAND; SIGNALS, DISTRESS; FLARES, AERIAL and FLARES, SURFACE.

### AMMUNITION, INCENDIARY

Ammunition containing incendiary substances which may be a solid, liquid or gel including white phosphorus. Except when the composition is an explosive *per se*, it also contains one or more of the following: a propelling charge with primer and igniter charge; a fuze with burster or expelling charge. The term includes:

AMMUNITION, INCENDIARY, liquid or gel, with burster, expelling charge or propelling charge;

AMMUNITION, INCENDIARY with or without burster, expelling charge or propelling charge;

AMMUNITION, INCENDIARY, WHITE PHOSPHORUS with burster, expelling charge or propelling charge.

### AMMUNITION, PRACTICE

Ammunition without a main bursting charge, containing a burster or expelling charge. Normally it also contains a fuze and a propelling charge. The term excludes the following articles which are listed separately: GRENADES, PRACTICE.

### AMMUNITION, PROOF

Ammunition containing pyrotechnic substances, used to test the performance or strength of new ammunition, weapon component or assemblies.

### AMMUNITION, SMOKE

Ammunition containing a smoke-producing substance such as chlorosulphonic acid mixture, titanium tetrachloride or white phosphorus; or smoke-producing pyrotechnic composition based on hexachloroethane or red phosphorus. Except when the substance is an explosive *per se*, the ammunition also contains one or more of the following: a propelling charge with primer and igniter charge; a fuze with burster or expelling charge. The term includes grenades, smoke but excludes SIGNALS, SMOKE which are listed separately. The term includes:

AMMUNITION, SMOKE with or without burster, expelling charge or propelling charge;

AMMUNITION, SMOKE, WHITE PHOSPHORUS with burster, expelling charge or propelling charge.

Appendices

|   |   |
|---|---|
| <b>AMMUNITION, TEAR-PRODUCING with burster, expelling charge or propelling charge</b> | Ammunition containing tear-producing substance. It also contains one or more of the following: a pyrotechnic substance; a propelling charge with primer and igniter charge; a fuze with burster or expelling charge.  |
| <b>AMMUNITION, TOXIC with burster, expelling charge or propelling charge</b>          | Ammunition containing toxic agent. It also contains one or more of the following: a pyrotechnic substance; a propelling charge with primer and igniter charge; a fuze with burster or expelling charge.   |
| <b>ARTICLES, EXPLOSIVE, EXTREMELY INSENSITIVE (ARTICLES, EEI)</b>                     | Articles that predominantly contain extremely insensitive substances and which demonstrate a negligible probability of accidental initiation or propagation (under normal conditions of transport) and which have passed test series 7.   |
| <b>ARTICLES, PYROPHORIC</b>   | Articles which contain a pyrophoric substance (capable of spontaneous ignition when exposed to air) and an explosive substance or component. The term excludes articles containing white phosphorus.  |
| <b>ARTICLES, PYROTECHNIC for technical purposes</b>                                   | Articles which contain pyrotechnic substances and are used for technical purposes such as heat generation, gas generation, theatrical effects, etc. The term excludes the following articles which are listed separately: all ammunition; CARTRIDGES, SIGNAL; CUTTERS, CABLE, EXPLOSIVE; FIREWORKS; FLARES, AERIAL; FLARES, SURFACE; RELEASE DEVICES, EXPLOSIVE; RIVETS, EXPLOSIVE; SIGNAL DEVICES, HAND; SIGNALS, DISTRESS; SIGNALS, RAILWAY TRACK, EXPLOSIVE; SIGNALS, SMOKE. |
| <b>Auxiliary explosive component, isolated</b>  | An "isolated auxiliary explosive component" is a small device that explosively performs an operation related to the article's functioning, other than its main explosive load's performance. Functioning of the component does not cause any reaction of the main explosive loads contained within the article.   |
| <b>BLACK POWDER (GUNPOWDER)</b>   | Substance consisting of an intimate mixture of charcoal or other carbon and either potassium nitrate or sodium nitrate, with or without sulphur. It may be meal, granular, compressed or pelletized.  |
| <b>Bombs</b>  | Explosive articles which are dropped from aircraft. They may contain a flammable liquid with bursting charge, a photo-flash composition or a bursting charge. The term excludes torpedoes (aerial) and includes:<br><ul style="list-style-type: none"> <li>BOMBS, PHOTO-FLASH;</li> <li>BOMBS with bursting charge;</li> <li>BOMBS WITH FLAMMABLE LIQUID with bursting charge.</li> </ul>   |
| <b>BOOSTERS</b>   | Articles consisting of a charge of detonating explosive with or without means of initiation. They are used to increase the initiating power of detonators or detonating cord.   |
| <b>BURSTERS, explosive</b>  | Articles consisting of a small charge of explosive used to open projectiles or other ammunition in order to disperse their contents.  |
| <b>Cartridges, blank</b>  | Articles which consist of a cartridge case with a centre or rim fire primer and a confined charge of smokeless or black powder but no projectile. Used for training, saluting or in starter pistols, tools, etc.  |
| <b>CARTRIDGES, FLASH</b>  | Articles consisting of a casing, a primer and flash powder, all assembled in one piece ready for firing.  |

|  |  |
|--|--|
| <b>Cartridges for Weapons</b>                    | <p>.1 Fixed (assembled) or semi-fixed (partially-assembled) ammunition designed to be fired from weapons. Each cartridge includes all the components necessary to function the weapon once. The proper shipping name shall be used for small arms cartridges that cannot be described as “cartridges, small arms”. Separate loading ammunition is included under this proper shipping name when the propelling charge and projectile are packed together (see also “Cartridges, blank”).</p> <p>.2 Incendiary, smoke, toxic and tear-producing cartridges are described in this Glossary under AMMUNITION, INCENDIARY etc.</p> |
| <b>CARTRIDGES FOR WEAPONS, INERT PROJECTILE</b>  | <p>Ammunition consisting of a projectile without bursting charge but with a propelling charge. The presence of a tracer can be disregarded for classification purposes provided that the predominant hazard is that of the propelling charge.</p>  |
| <b>CARTRIDGES, OIL WELL</b>                      | <p>Articles consisting of a casing of thin fibre, metal or other material containing only propellant which projects a hardened projectile. The term excludes the following articles which are listed separately: CHARGES, SHAPED.</p>  |
| <b>CARTRIDGES, POWER DEVICE</b>                  | <p>Articles designed to accomplish mechanical actions. They consist of a casing with a charge of deflagrating explosive and a means of ignition. The gaseous products of the deflagration produce inflation, or linear or rotary motion, or activate diaphragms, valves or switches or project fastening devices or extinguishing agents.</p>  |
| <b>CARTRIDGES, SIGNAL</b>                        | <p>Articles designed to fire coloured flares or other signals from signal pistols, etc.</p>  |
| <b>CARTRIDGES, SMALL ARMS</b>                    | <p>Ammunition consisting of a cartridge case fitted with a centre or rim fire primer and containing both a propelling charge and a solid projectile. They are designed to be fired in weapons of calibre not larger than 19.1 mm. Shotgun cartridges of any calibre are included in this description. The term excludes: CARTRIDGES, SMALL ARMS, BLANK listed separately in the Dangerous Goods List; and some small arms cartridges which are listed under CARTRIDGES FOR WEAPONS, INERT PROJECTILE.</p>  |
| <b>CASES, CARTRIDGE, EMPTY, WITH PRIMER</b>      | <p>Articles consisting of a cartridge case made from metal, plastics or other non-flammable material, in which the only explosive component is the primer.</p>   |
| <b>CASES, COMBUSTIBLE, EMPTY, WITHOUT PRIMER</b> | <p>Articles consisting of cartridge cases made partly or entirely from nitrocellulose.</p>   |
| <b>Charges, bursting</b>                         | <p>Articles consisting of a charge of detonating explosive such as hexolite, octolite or plastics bonded explosive designed to produce effect by blast or fragmentation.</p>   |
| <b>CHARGES, DEMOLITION</b>                       | <p>Articles containing a charge of a detonating explosive in a casing of fibreboard, plastics, metal or other material. The term excludes the following articles which are listed separately: bombs, mines, etc.</p>   |
| <b>CHARGES, DEPTH</b>                            | <p>Articles consisting of a charge of detonating explosive contained in a drum or projectile. They are designed to detonate under water.</p>   |
| <b>Charges, expelling</b>                        | <p>A charge of deflagrating explosive designed to eject the payload from the parent articles without damage.</p>   |

|   |   |
|---|---|
| CHARGES, EXPLOSIVE, COMMERCIAL without detonator                                  | Articles consisting of a charge of detonating explosive without means of initiation, used for explosive welding, jointing, forming and other metallurgical processes.   |
| CHARGES, PROPELLING   | Articles consisting of a propellant charge in any physical form, with or without a casing, for use as a component of rocket motors or for reducing the drag of projectiles.   |
| CHARGES, PROPELLING FOR CANNON  | Articles consisting of a propellant charge in any physical form, with or without a casing, for use in a cannon.   |
| CHARGES, SHAPED, without detonator  | Articles consisting of a casing containing a charge of detonating explosive with a cavity lined with rigid material, without means of initiation. They are designed to produce a powerful, penetrating jet effect.  |
| CHARGES, SHAPED, FLEXIBLE, LINEAR   | Articles consisting of a V-shaped core of a detonating explosive clad by a flexible metal sheath.   |
| CHARGES, SUPPLEMENTARY, EXPLOSIVE   | Articles consisting of a small removable booster used in the cavity of a projectile between the fuze and the bursting charge.   |
| COMPONENTS, EXPLOSIVE TRAIN, N.O.S.   | Articles containing an explosive designed to transmit the detonation or deflagration within an explosive train.   |
| CONTRIVANCES, WATER-ACTIVATED with burster, expelling charge or propelling charge | Articles whose functioning depends upon physico-chemical reaction of their contents with water.   |
| CORD, DETONATING, flexible  | Article consisting of a core of detonating explosive enclosed in spun fabric, with plastics or other covering unless the spun fabric is sift-proof.   |
| CORD (FUZE), DETONATING, metal clad   | Article consisting of a core of detonating explosive clad by a soft metal tube with or without protective covering. When the core contains a sufficiently small quantity of explosive, the words "MILD EFFECT" are added.   |
| CORD, IGNITER   | Article consisting of textile yarns covered with black powder or another fast-burning pyrotechnic composition and of a flexible protective covering; or it consists of a core of black powder surrounded by a flexible woven fabric. It burns progressively along its length with an external flame and is used to transmit ignition from a device to a charge or primer.   |
| CUTTERS, CABLE, EXPLOSIVE   | Articles consisting of a knife-edged device which is driven by a small charge of deflagrating explosive into an anvil.  |
| DETONATOR ASSEMBLIES, NON-ELECTRIC for blasting                                   | Non-electric detonators assembled with and activated by such means as safety fuse, shock tube, flash tube or detonating cord. They may be of instantaneous design or incorporate delay elements. Detonating relays incorporating detonating cord are included. Other detonating relays are included in "Detonators, non-electric".  |
| Detonators  | Articles consisting of a small metal or plastics tube containing explosives such as lead azide, PETN or combinations of explosives. They are designed to start a detonation train. They may be constructed to detonate instantaneously, or may contain a delay element. The term includes:<br><br><div style="margin-left: 40px;"> <p>DETONATORS FOR AMMUNITION and<br/> DETONATORS for blasting, ELECTRIC, NON-ELECTRIC, and ELECTRONIC programmable.</p> </div> <p>Detonating relays without flexible detonating cord are included.</p> |

|   |  |
|---|--|
| <b>DETONATORS, ELECTRONIC programmable for blasting</b> | Detonators with enhanced safety and security features, utilizing electronic components to transmit a firing signal with validated commands and secure communications. Detonators of this type cannot be initiated by other means.  |
| <b>Entire load and total contents</b>                   | The phrases “entire load” and “total contents” mean such a substantial proportion that the practical hazard shall be assessed by assuming simultaneous explosion of the whole of the explosive content of the load or package.   |
| <b>Explode</b>  | The verb used to indicate those explosive effects capable of endangering life and property through blast, heat and projection of missiles. It encompasses both deflagration and detonation.  |
| <b>Explosion of the total contents</b>                  | The phrase “explosion of the total contents” is used in testing a single article or package or a small stack of articles or packages.  |
| <b>Explosive, blasting</b>                              | Detonating explosive substances used in mining, construction and similar tasks. Blasting explosives are assigned to one of five types. In addition to the ingredients listed, blasting explosives may also contain inert components such as kieselguhr, and minor ingredients such as colouring agents and stabilizers.  |
| <b>EXPLOSIVE, BLASTING, TYPE A</b>                      | Substances consisting of liquid organic nitrates such as nitroglycerin or a mixture of such ingredients with one or more of the following: nitrocellulose; ammonium nitrate or other inorganic nitrates; aromatic nitro-derivatives, or combustible materials, such as wood-meal and aluminium powder. Such explosives shall be in powdery, gelatinous or elastic form.<br><br>The term includes dynamite gelatine, blasting and gelatine dynamites. |
| <b>EXPLOSIVE, BLASTING, TYPE B</b>                      | Substances consisting of (a) a mixture of ammonium nitrate or other inorganic nitrates with an explosive such as trinitrotoluene, with or without other substances such as wood-meal and aluminium powder, or (b) a mixture of ammonium nitrate or other inorganic nitrates with other combustible substances which are not explosive ingredients. Such explosives shall not contain nitroglycerin, similar liquid organic nitrates, or chlorates.   |
| <b>EXPLOSIVE, BLASTING, TYPE C</b>                      | Substances consisting of a mixture of either potassium or sodium chlorate or potassium, sodium or ammonium perchlorate with organic nitro-derivatives or combustible materials such as wood-meal or aluminium powder or a hydrocarbon. Such explosives shall not contain nitroglycerin or similar liquid organic nitrates.   |
| <b>EXPLOSIVE, BLASTING, TYPE D</b>                      | Substances consisting of a mixture of organic nitrated compounds and combustible materials such as hydrocarbons and aluminium powder. Such explosives shall not contain nitroglycerin, similar liquid organic nitrates, chlorates or ammonium nitrate. The term generally includes plastic explosives.   |
| <b>EXPLOSIVE, BLASTING, TYPE E</b>                      | Substances consisting of water as an essential ingredient and high proportions of ammonium nitrate or other oxidizers, some or all of which are in solution. The other constituents may include nitro-derivatives such as trinitrotoluene, hydrocarbons or aluminium powder.<br><br>The term includes explosives, emulsion; explosives slurry and explosives, water gel.   |

|  |  |
|--|--|
| Explosive, deflagrating  | A substance, e.g. propellant, which reacts by deflagration rather than detonation when ignited and used in its normal manner.  |
| Explosive, detonating  | A substance which reacts by detonation rather than deflagration when initiated and used in its normal manner.  |
| Explosive, extremely insensitive substance (EIS)               | A substance which has demonstrated through tests that it is so insensitive that there is very little probability of accidental initiation.   |
| Explosive, primary   | Explosive substance manufactured with a view to producing a practical effect by explosion which is very sensitive to heat, impact or friction and which, even in very small quantities, either detonates or burns very rapidly. It is able to transmit detonation (in the case of initiating explosive) or deflagration to secondary explosives close to it. The main primary explosives are mercury fulminate, lead azide and lead styphnate. |
| Explosive, secondary   | Explosive substance which is relatively insensitive (when compared to primary explosives), which is usually initiated by primary explosives with or without the aid of boosters or supplementary charges. Such an explosive may react as a deflagrating or as a detonating explosive.  |
| <b>■ FIRE SUPPRESSANT DISPERSING DEVICES</b>                   | Articles which contain a pyrotechnic substance, which are intended to disperse a fire-extinguishing agent (or aerosol) when activated, and which do not contain any other dangerous goods.   |
| <b>FIREWORKS</b>   | Pyrotechnic articles designed for entertainment.   |
| Flares   | Articles containing pyrotechnic substances which are designed for use to illuminate, identify, signal or warn. The term includes:<br>FLARES, AERIAL;<br>FLARES, SURFACE.   |
| FLASH POWDER   | Pyrotechnic substance which, when ignited, produces an intense light.  |
| FRACTURING DEVICES, EXPLOSIVE for oil wells, without detonator | Articles consisting of a charge of detonating explosive contained in a casing without means of initiation. They are used to fracture the rock around a drill shaft to assist the flow of crude oil from the rock.  |
| Fuse/Fuze  | Although these two words have a common origin (French fusée, fusil) and are sometimes considered to be different spellings, it is useful to maintain the convention that fuse refers to a cord-like igniting device whereas fuze refers to a device used in ammunition which incorporates mechanical, electrical, chemical or hydrostatic components to initiate a train by deflagration or detonation.  |
| FUSE, IGNITER, tubular, metal clad                             | Article consisting of a metal tube with a core of deflagrating explosive.  |
| FUSE, INSTANTANEOUS, NON-DETONATING (QUICKMATCH)               | Article consisting of cotton yarns impregnated with fine black powder (Quickmatch). It burns with an external flame and is used in ignition trains for fireworks, etc.   |
| FUSE, SAFETY   | Article consisting of a core of fine-grained black powder surrounded by a flexible woven fabric with one or more protective outer coverings. When ignited, it burns at a predetermined rate without any external explosive effect.   |

|                                |  |
|--------------------------------|--|
| <b>Fuzes</b>                   | <p>Articles designed to start a detonation or a deflagration in ammunition. They incorporate mechanical, electrical, chemical or hydrostatic components and generally protective features. The term includes:</p> <p style="padding-left: 20px;">FUZES, DETONATING;</p> <p style="padding-left: 20px;">FUZES, DETONATING with protective features;</p> <p style="padding-left: 20px;">FUZES, IGNITING.</p>   |
| <b>GRENADES, hand or rifle</b> | <p>Articles which are designed to be thrown by hand or to be projected by a rifle. The term includes:</p> <p style="padding-left: 20px;">GRENADES, hand or rifle, with bursting charge;</p> <p style="padding-left: 20px;">GRENADES, PRACTICE, hand or rifle.</p> <p>The term excludes grenades, smoke which are listed under AMMUNITION, SMOKE.</p>   |
| <b>IGNITERS</b>                | <p>Articles containing one or more explosive substances used to start deflagration in an explosive train. They may be actuated chemically, electrically or mechanically. This term excludes the following articles which are listed separately: CORD, IGNITER; FUSE, IGNITER; FUSE, NON-DETONATING; FUZES, IGNITING; LIGHTERS, FUSE; PRIMERS, CAP TYPE; PRIMERS, TUBULAR.</p>  |
| <b>Ignition, means of</b>      | <p>A general term used in connection with the method employed to ignite a deflagrating train of explosive or pyrotechnic substances (for example: a primer for a propelling charge; an igniter for a rocket motor; an igniting fuze).</p>  |
| <b>Initiation, means of</b>    | <ol style="list-style-type: none"> <li>.1 A device intended to cause the detonation of an explosive (for example: detonator; detonator for ammunition; detonating fuze).</li> <li>.2 The term “with its own means of initiation” means that the contrivance has its normal initiating device assembled to it and this device is considered to present a significant risk during transport but not one great enough to be unacceptable. The term does not apply, however, to a contrivance packed together with its means of initiation provided the device is packaged so as to eliminate the risk of causing detonation of the contrivance in the event of accidental functioning of the initiating device. The means of initiating can even be assembled to the contrivance provided there are protective features such that the device is very unlikely to cause detonation of the contrivance in conditions which are associated with transport.</li> <li>.3 For the purposes of classification any means of initiation without two effective protective features shall be regarded as compatibility group B; an article with its own means of initiation, without two effective protective features, would be compatibility group F. On the other hand a means of initiation which itself possesses two effective protective features would be compatibility group D; and an article with a means of initiation which possesses two effective protective features would be compatibility group D or E. Means of initiation adjudged as having two effective protective features shall have been approved by the competent national authority. A common and effective way of achieving the necessary degree of protection is to use a means of initiation which incorporates two or more independent safety features.</li> </ol> |

Appendices

|   |   |
|---|---|
| <b>JET PERFORATING GUNS, CHARGED, oil well, without detonator</b> | Articles consisting of a steel tube or metallic strip, into which are inserted shaped charges connected by detonating cord, without means of initiation.  |
| <b>LIGHTERS, FUSE</b>   | Articles of various design actuated by friction, percussion or electricity and used to ignite safety fuse.  |
| <b>Mass explosion</b>   | Explosion which affects almost the entire load virtually instantaneously.   |
| <b>MINES</b>  | Articles consisting normally of metal or composition receptacles and a bursting charge. They are designed to be operated by the passage of ships, vehicles or personnel. The term includes "Bangalore torpedoes".   |
| <b>OXYGEN GENERATORS, CHEMICAL</b>                                | Oxygen generators, chemical, are devices containing chemicals which upon activation release oxygen as a product of chemical reaction. Chemical oxygen generators are used for the generation of oxygen for respiratory support, e.g. in aircraft, submarines, spacecraft, bomb shelters and breathing apparatus. Oxidizing salts such as chlorates and perchlorates of lithium, sodium and potassium, which are used in chemical oxygen generators, evolve oxygen when heated. These salts are mixed (compounded) with a fuel, usually iron powder, to form a chlorate candle, which produces oxygen by continuous reaction. The fuel is used to generate heat by oxidation. Once the reaction begins, oxygen is released from the hot salt by thermal decomposition (a thermal shield is used around the generator). A portion of the oxygen reacts with the fuel to produce more heat which produces more oxygen, and so on. Initiation of the reaction can be achieved by a percussion device, friction device or electric wire. |
| <b>POWDER CAKE (POWDER PASTE), WETTED</b>                         | Substance consisting of nitrocellulose impregnated with not more than 60% of nitroglycerin or other liquid organic nitrates or a mixture of these.  |
| <b>POWDER, SMOKELESS</b>  | Substance based on nitrocellulose used as propellant. The term includes propellants with a single base (nitrocellulose (NC) alone), those with a double base (such as NC and nitroglycerin (NG)) and those with a triple base (such as NC/NG/nitroguanidine). Cast, pressed or bag-charges of smokeless powder are listed under "CHARGES, PROPELLING" or "CHARGES, PROPELLING FOR CANNON".  |
| <b>PRIMERS, CAP TYPE</b>  | Articles consisting of a metal or plastics cap containing a small amount of primary explosive mixture that is readily ignited by impact. They serve as igniting elements in small arms cartridges, and in percussion primers for propelling charges.  |
| <b>PRIMERS, TUBULAR</b>   | Articles consisting of a primer for ignition and an auxiliary charge of deflagrating explosive such as black powder used to ignite the propelling charge in a cartridge case for cannon, etc.   |
| <b>PROJECTILES</b>  | Articles such as a shell or bullet which are projected from a cannon or other artillery gun, rifle or other small arm. They may be inert, with or without tracer, or may contain a burster or expelling charge or a bursting charge. The term includes:<br><ul style="list-style-type: none"> <li>PROJECTILES, inert, with tracer;</li> <li>PROJECTILES with burster or expelling charge;</li> <li>PROJECTILES with bursting charge.</li> </ul>   |

APPENDIX B

|  |   |
|--|---|
| <b>PROPELLANTS</b>   | Deflagrating explosive used for propulsion or for reducing the drag of projectiles.   |
| <b>PROPELLANTS, LIQUID</b>   | Substances consisting of a deflagrating liquid explosive, used for propulsion.  |
| <b>PROPELLANTS, SOLID</b>  | Substances consisting of a deflagrating solid explosive, used for propulsion.   |
| <b>RELEASE DEVICES, EXPLOSIVE</b>  | Articles consisting of a small charge of explosive with means of initiation. They sever rods or links to release equipment quickly.   |
| <b>ROCKET MOTORS</b>   | Articles consisting of a solid, liquid or hypergolic fuel contained in a cylinder fitted with one or more nozzles. They are designed to propel a rocket or a guided missile. The term includes:<br>ROCKET MOTORS;<br>ROCKET MOTORS WITH HYPERGOLIC LIQUIDS with or without expelling charge;<br>ROCKET MOTORS, LIQUID FUELLED.  |
| <b>ROCKETS</b>   | Articles consisting of a rocket motor and a payload which may be an explosive warhead or other device. The term includes guided missiles and:<br>ROCKETS, LINE-THROWING;<br>ROCKETS, LIQUID FUELLED with bursting charge;<br>ROCKETS with bursting charge;<br>ROCKETS with expelling charge;<br>ROCKETS with inert head.  |
| <b>SAFETY DEVICES, electrically initiated</b>                            | Articles which contain pyrotechnic substances or dangerous goods of other classes and are used in vehicles, vessels or aircraft to enhance safety to persons. Examples are air bag inflators, air bag modules, seat-belt pretensioners and pyromechanical devices. These pyromechanical devices are assembled components for tasks such as but not limited to separation, locking, or release-and-drive or occupant restraint. The term includes "SAFETY DEVICES, PYROTECHNIC". |
| <b>SIGNALS</b>   | Articles containing pyrotechnic substances designed to produce signals by means of sound, flame or smoke or any combinations thereof. The term includes:<br>SIGNAL DEVICES, HAND;<br>SIGNALS, DISTRESS, ship;<br>SIGNALS, RAILWAY TRACK, EXPLOSIVE;<br>SIGNALS, SMOKE.  |
| <b>SOUNDING DEVICES, EXPLOSIVE</b>                                       | Articles consisting of a charge of detonating explosive. They are dropped from ships and function when they reach a predetermined depth or the sea bed.   |
| <b>STABILIZED</b>  | Stabilized means that the substance is in a condition that precludes uncontrolled reaction. This may be achieved by methods such as the addition of an inhibiting chemical, degassing the substance to remove dissolved oxygen and inerting the air space in the package, or maintaining the substance under temperature control.   |
| <b>SUBSTANCES, EXPLOSIVE, VERY INSENSITIVE (SUBSTANCES, EVI), N.O.S.</b> | Substances which present a mass explosion hazard but which are so insensitive that there is very little probability of initiation, or of transition from burning to detonation (under normal conditions of transport) and which have passed test series 5.  |

Appendices

---

**TORPEDOES**

Articles containing an explosive or non-explosive propulsion system and designed to be propelled through water. They may contain an inert head or a warhead. The term includes:

- TORPEDOES, LIQUID FUELLED with inert head;
- TORPEDOES, LIQUID FUELLED with or without bursting charge;
- TORPEDOES with bursting charge.

**TRACERS FOR AMMUNITION**

Sealed articles containing pyrotechnic substances, designed to reveal the trajectory of a projectile.

**Warheads**

Articles consisting of detonating explosives. They are designed to be fitted to a rocket, guided missile or torpedo. They may contain a burster or expelling charge or bursting charge. The term includes:

- WARHEADS, ROCKET with burster or expelling charge;
- WARHEADS, ROCKET with bursting charge;
- WARHEADS, TORPEDO with bursting charge.

# INDEX

# Index

---

In this index, the word “see”, after the name in the substance, material or article column, means that it is a synonym and for details regarding the transport provisions reference shall be made to the entry in the Dangerous Goods List (chapter 3.2) which is relevant to the UN number/proper shipping name stated against the synonym.

## Method of indexing

Substances, materials and articles have been listed in the alphabetical order of their names. For the purpose of determining the alphabetical order, numbers and roman numerals (I), (II) etc. and the prefixes listed below have been disregarded, although they form an integral part of the name:

|                           |                     |
|---------------------------|---------------------|
| <i>N-</i>                 | <i>sym-</i>         |
| <i>n- or normal-</i>      | <i>uns-</i>         |
| <i>sec- or secondary-</i> | <i>cis-</i>         |
| <i>tert- or tertiary-</i> | <i>trans-</i>       |
| <i>o- or ortho-</i>       | <i>d-</i>           |
| <i>m- or meta-</i>        | <i>α- or alpha-</i> |
| <i>p- or para-</i>        | <i>β- or beta-</i>  |
|                           | <i>γ- or gamma-</i> |

## Note 1

Certain marine pollutants are identified only in the index. These marine pollutants have not been assigned to an N.O.S. or generic entry. These marine pollutants may possess properties of classes 1 to 8 and should be classified accordingly. A substance which does not fall within the criteria of these classes should be offered for transport as an ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOLID, N.O.S., UN 3077, or as an ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S., UN 3082, under these entries in class 9.

| ZIRCONIUM, DRY, finished sheets, strip or coiled wire   | –  | 4.2   | 2009   |
| ZIRCONIUM HYDRIDE   | –  | 4.1   | 1437   |
| ZIRCONIUM NITRATE   | –  | 5.1   | 2728   |
| ZIRCONIUM PICRAMATE, dry or wetted with less than 20% water,<br>by mass   | –  | 1.3C  | 0236   |
| ZIRCONIUM PICRAMATE, WETTED with not less than 20% water,<br>by mass  | –  | 4.1   | 1517   |
| ZIRCONIUM POWDER, DRY   | –  | 4.2   | 2008   |
| ZIRCONIUM POWDER, WETTED with not less than 25% water<br>(a visible excess of water must be present)<br>(a) mechanically produced, particle size less than 53 microns | –  | 4.1   | 1358   |
| ZIRCONIUM POWDER, WETTED with not less than 25% water<br>(a visible excess of water must be present)<br>(b) chemically produced, particle size less than 840 microns  | –  | 4.1   | 1358   |
| ZIRCONIUM SCRAP   | –  | 4.2   | 1932   |
| ZIRCONIUM, SUSPENDED IN A FLAMMABLE LIQUID  | –  | 3     | 1308   |
| ZIRCONIUM TETRACHLORIDE   | –  | 8     | 2503   |
